TO BE LET, extensive PREMISES in BERMONDSEY, consisting of a large Yard, Dwelling-house, Counting-house, Stabling, &c. with a acre of ground, and with a short distance of London-bridge, well adapted for timber or hay business, where great space is required.—Apply to ROBERT WARD, Timber Auctioneer, Oxford-street.

TO SLATE MERCHANTS.

TO BE LET, PART of a WHARF, with the Sheds and Counting-house, adapted for the above trade or adding of timber. Rent moderate.—Apply to C. S. 19 Wharf, Cotton-street, Poplar.

NORWOOD, SURREY.—Several PLOTS of FREEHOLD BUILDING GROUND, in that rapidly-improved, healthy, and picturesque village, TO BE LET, on moderate terms, to complete two streets formed and gravelled, with drains, &c. The principal portion of the ground is already secured for building, and the streets varying from 30ft. to 50ft. apart.—Apply to Mr. W. CORNELIUS, Estate Agent, No. 2, High-street, Newington-butts; or to Mr. PEACOCK, Surveyor, No. 11, Coburg-place, Kennington-lane, Vauxhall.

BAYSWATER.—FREEHOLD GROUND in PEMBRIDGE VILLAS, Westbourne-grove West, Bayswater, 50 feet frontage, by 150 feet deep, TO LET, for building. Let in lots, or the whole, with immediate possession. Coach-house and stable. Apply to Messrs. MAY and SWEETLAND, 14, Queen-square, Bloomsbury.

HAINAULT, ESSEX. The Commissioner in charge of her Majesty's Land Revenue is desirous of LETTING in lots, on the most favourable terms, for the purpose of building Residences, or otherwise, for which it is annually adapted, that section of the Queen's Allotments within HAINAULT FOREST, long east of the high road leading from the Queen's Head, Woodford Bridge, to Romford, being the Queen's Hall and Hainault Farms, and containing about 1,000 acres, abutting on a good road, within three miles of the Woodford Station on the Eastern Counties Railway, chiefly gravelly, and well timbered throughout. The surface is undulating, and studded with a large quantity of fine oak timber, and being within a short distance of the Forest, presents a picturesque appearance. It will be divided into lots containing not less than 8, with the boundaries of each lot distinctly marked out. Further particulars may be had of Mr. GEORGE MOODIE, of Hoghill House, in the Forest, who will show the property.

KENNINGTON.—To BUILDERS, and others requiring spacious Premises.—TO BE SOLD, a valuable freehold ESTATE, situated in the best part of Kennington, consisting of two substantial dwelling-houses, large garden, and coach-house, with entrance to the main road, and also an entrance by a street in the rear. The dwelling-house and premises will be sold by first instance to A. B. C. No. 7, Coburg-place, Kennington-lane.

TO BRICKMAKERS, LIME BURNERS, AND OTHERS

TO BE LET, a PLOT of GROUND, adjoining the Stoak's Nest Station of the Brighton Railway, and within a mile and a half of the Sea, suitable for the above purposes.—Apply, Messrs. CHAMBERS and PORDEN, No. 7, Great Tower-street.

TO BE SOLD, by PUBLIC TENDER, an eligible FREEHOLD HOUSE and GARDEN, with Coach-house and Stabling, situate at 2, Brunton-place, Brunton-road, in the occupation of Mr. John Hudson. Particulars may be obtained of Mr. GEORGE ELKINGTON, Architect and Surveyor, 2, Cannon-street, City, to whom Tenders, in writing, stating the amount proposed to be given for the property, are to be forwarded on or before MONDAY, the 27th day of MARCH.

TO INSURANCE COMPANIES, BANKING ESTABLISHMENTS, PUBLIC INSTITUTIONS, and Others requiring a first rate position in the City of London.

MESSRS. HERRING and SON are commissioned to OFFER one of the most eligible and commanding SITES for BUILDING to be met with in the City of London, westward of St. Paul's, presenting a frontage of about 42 feet, with a much more extensive depth.—For particulars, apply to Messrs. HERRING and SON, 107, Fleet-street.

TO BUILDERS OR BUYERS OF FREEHOLD LAND.

TO BE SOLD, a bargain, the remaining THIRTY-ONE PLOTS of valuable FREEHOLD BUILDING LAND, six of them situate at ROAD Farm, Bow, near Clapton-park, the remainder at Plaistow, and about a mile from the Victoria-dock, and in a most excellent position for a public-house, some of them being roadside plots.—For particulars, apply to Mr. W. SHEAD, 10, Three Colts-street Old Ford, Bow.

HOUSE with LARGE GARDEN.—WANTED to PURCHASE, a good old-fashioned HOUSE of ten or twelve rooms, with suitable offices, and Garden of one or two acres freehold, within ten miles of Top-hill, Surrey side preferred.—Address, with lowest price and full particulars, to Mr. W. SABINE, Architect, Winchester-house, Old Broad-street.

LAND WANTED.—From Twenty-five to Sixty Acres of FREEHOLD MEADOW LAND, either with or without a house thereon, in a healthy and respectable locality, within an hour's drive of the City, or an hour's distance by railway: if the latter, it must be within a mile of the station.—Address, with lowest price and full particulars, to Mr WILLIAM SABINE, Architect, Winchester-house, Old Broad street.

PREMISES WANTED, between 'Change and the Blackwall Railway, with ground floor of not less than 2,000 to 3,000 square feet. Two or three floors will be required.—Address, with particulars, post-paid, to Mr. ELGER STEPHENSON, 83, Lime-street, City.

TO CARPENTERS, BUILDERS AND BRICKLAYERS.

THE LEASE and BUSINESS of a very old-established TRADE TO BE DISPOSED OF.—The premises are in Westminster, and are held for an unexpired term of about ninety years. They comprise a ten-room dwelling-house, with extensive workshops attached, with a six-room house behind, with separate entrance. The shops are fitted with gas-fittings, and are in every respect complete. The stock and fixtures to be taken at a valuation.—For terms and particulars, apply to Messrs. STEVENSON and LEY, Solicitors, 1, Victoria-street, Holborn-bridge.

TO FARRIERS AND BLACKSMITHS.

A SMALL BUSINESS in the above line TO BE DISPOSED OF, near London.—Apply at Messrs. PFEIL and STEDALL'S, 6, Broad-street, Bloomsbury.

TO DECORATORS, PLUMBERS, GASFITTERS, BUILDERS, &c.

TO BE DISPOSED OF, an old-established and highly-respectable and lucrative BUSINESS, in a flourishing seaport town, within a convenient distance of London. The stock and fixtures to be taken at a valuation. An eligible party is willing to join another with a small capital in the business, if it is not disposed of entire.—For particulars, apply to Messrs. JAMES GAY and CO. No. 6, Lawrence Pountney hill, Cannon-street, London

TO FURNISHING IRONMONGERS, SMITHS, &c.

TO BE DISPOSED OF, at the West-end of London, a good BUSINESS in the above branches, well established, and capable of extension.—Apply by letter only, addressed L. A. T. 23, Grafton-street, Soho.

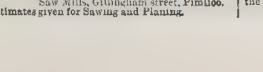
TO CAPITALISTS, ENGINEERS, AND OTHERS.

PARTNERSHIP.—The Principal in an extensive and increasing business in one of the Mid and Counties is desirous of meeting with a PARTNER, possessed of a capital between 7,000*l.* and 8,000*l.* The whole, or the principal part of which may not be required immediately. For further particulars and to treat apply personally to Messrs. LUCAS, WOODS, and STREET, No. 6, Raymond buildings, Gray's-inn, London

TO BUILDERS

THE Advertiser, by profession an Engineer, and having a fair practical knowledge of building, is desirous of entering as PARTNER in an old-established builder's business in the country, where the present proprietor is desirous of retiring from the more active duties of the profession.—Address, with full particulars, to A. Z. Post-office, Hove, near Brighton, Sussex.

AN experienced Civil Engineer, inventor and patentee of IMPROVEMENTS in HEATING now in operation, of unrivalled economy and of the most extensive applicability, is willing to DISPOSE of an INTEREST in his patent rights, grant a special licence for a county, or unite with one or more capitalists in carrying out his invention on an extensive scale, on very liberal terms.—Apply by letter to P. P. at Bennett and Powell's, Solicitors, Sise-lane, Bucklersbury.



PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest price of the day, and with the greatest possible despatch. Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums.

The Annual General Meeting of this Society was held on the 28th of May, 1851 when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that whilst the Assurances effected in 1851 were 41 per cent. beyond those of 1850, nearly 70 per cent beyond those of 1849, and 130 per cent. beyond those of 1848, the Assurances effected in 1852 considerably exceeded those of 1851, 335 new Policies having been issued in that year, covering Assurances to the extent of 186,600*l.* the yearly premiums on which amounted to 6,106*l.* 18*s.* It also appeared that the transactions of the first five months of the present year were greater than those of the corresponding months of 1852, or of any preceding year, while during the whole period referred to, the claims arising from deaths were much below their estimated amount. A resolution was thereupon passed, continuing a reduction of 30 per cent. on the premiums payable on all Policies on the participating scale, on which five or more annual premiums had been previously paid.

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction:

Age when Assured.	Amount Assured	Annual Premium hitherto paid.	Reduction of 30 per cent.	Annual Premium now payable.
	£	£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d.*
20	1,000	20 17 6	6 5 3	14 12 3
25	1,000	23 0 0	6 18 0	16 2 0
35	1,000	43 15 0	13 2 6	30 12 6
45	1,000	80 11 8	24 3 6	56 8 2

ACTUARY.—Griffith Davies, esq. F.R.S.

LIFE DEPARTMENT.—Under the Provisions of an Act of Parliament, this Company now offers to future insurers four-fifths of its profits, with quinquennial division, or a low rate of premium, without participation of profits.

The next division of profits will be declared in June, 1855, when all Participating Policies which shall have subsisted a least one year at Christmas 1854 will be allowed to share in the profits.

At the several periods when profits may be declared by this Company, the reversionary bonuses added to the Policies from one-half the profits announced, on an average of the different ages to about one per cent. per annum on the sums insured, and the total bonuses added at the four septennial divisions exceed fifty per cent.

FOREIGN RISKS. The extra premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been moderately reduced.

INVALID LIVES. Persons who are not in such sound health as would enable them to insure their lives at the tabular premiums, may have their lives insured at extra premiums.

LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 60*l.*

ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered

Medical fees paid by the Company, and no charge will be made for Policy Stamps.

Notice is hereby given, That Fire Policies which expire at Lady-day must be renewed within fifteen days at this Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the Kingdom, otherwise they become void.

W. M. BROWNE, Secretary and Actuary.
Agents required in the principal Country Towns.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITH ITS SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been used as PATENTABILITY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful covering Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT. This Cement, which has been established many years, is now manufactured on such improved principles as to make it equally useful and valuable for INTERNAL as well as EXTERNAL purposes, rendering it unobjectionable in NURSERIES, HOTHOUSES, or VEGETABLE PITS, as the caustic qualities have entirely disappeared in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT. The merits of this Paint are justly appreciated by the trade for its ready affinity to Stone, Brick or other Roofs with its durability, appearance, and cheapness, it is one of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. One trial will effect a saving of 5s. per cwt. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of the Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the imposition of these counterfeits in the production of pigments is evidenced, not alone by the coarse grain appearance, but also by the selling price of that bodies in their produce, which is known to the public as adulterants. That an imposition be not practised, therefore, notice that the casks is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON—PATENT.

not so marked, the reason may be inferred.

Every conveyance in the city to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield opposite the London Docks, London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is recommended for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours, fogs, or gases. Being entirely free from lead it is free from the terrible effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any mixtures or compounds that might be sold at cheap rates as Pure Oxide of Zinc. Long and extensive trials have proved its superior colour in consequence of impurities in the material or many of the cheap oxides produced from impure metals of commerce, or by mixing with the whitest oxides, as recommended to give it increased weight, it then produces a very inferior material of a very superior price, and the economy realized by the purchasers of such oxide becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNES ZINC OXIDES, for internal use, are sold with the VM mark—at Hull, by Messrs. BUNDELL, SPENCER, and CO.; when ground and dry by Messrs. T. B. MOFLEY and CO., and by the Company's trading house in London, Messrs. CHARLES TAYLOR and CO. wholesale agents, 82, Bishopsgate Within, where the Company's wholesale and retail agent, S. Tottenham-court New road, and 86, Upper Thames-street, and in Manchester and Liverpool by Messrs. LAWRENCE and Co. of No. 1, Peter-street, where they are also to be seen, ready Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. In Leith by Messrs. ALEXANDER and Co. Timber Merchants. The OXIDES and SALTS in kegs 1/4 cwt. and 28 lbs. are supplied to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole and the Isles of Jersey, Guernsey, Man, and Wight, also in Dublin and Cork, Belfast.

The Company's Agents employ an acknowledged painter in London who will, under take any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Saffron-street, South-parade, their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, it requires but to add water, and stir, to bring it to a creamy consistency, when it will cover about 10 to 500 superficial feet, laid in coats of 1, 2, and 3 cwt. at 8s. 9s. and 12s. per cwt. in casks and kegs.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, &c. Rooms, and all surfaces, &c. are ready for use, and will stand the effects of sea air. It may be applied over cement, plaster, stucco, or any other surface. Sold in casks of 1 cwt. at 12s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, of the most pure, unchangeable in colour, greatly superior to, and will be found cheaper than common paints, and whatever much to be preferred to that the same operation will be found same. Price 12s. per cwt. in casks of 1 cwt. Many beautiful colours, as Primrose, Cadmium Blocks, for all kinds of outside work, Lavender, Stone, &c. &c. Sold in

PATENT FIRE-PROOF PAINT, which neither shrinks but remains a beautiful plastic elastic, and is permanently waterproof. Price per cwt. 20s.

THE ANNEALED PATENT ELASTIC PAINT, an efficient remedy by which they are rendered fit for painting or finishing in oil or varnish, in the same manner as wood, and have the same appearance. Sold in 1 cwt. casks at 12s. 6d. each.

TAYLOR, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Waterloo-road, London.

CLARK & CO.'S

NEW PATENT SELF-ACTING HYDRAULIC APPARATUS,

FOR

OPENING AND CLOSING

THEIR

PATENT RECTILINEAR REVOLVING SHUTTERS,

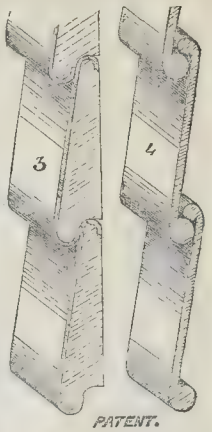
AND

PATENT COMBINED IRON AND WOOD REVOLVING SHUTTERS.

THE advantages of the Hydraulic Apparatus are,—great facility of application; a saving of seventy-five per cent. of friction in the working part over the old plan of worm and wheel, cannot get out of repair, and it is impossible for the shutter to run down; are more easily opened; require no labour whatever to close them; the cost is reduced; and does not affect the architectural or other arrangement of the building, as the pump can be placed at any distance from the shutter, and in any position. One Pump is sufficient for any number of shutters.

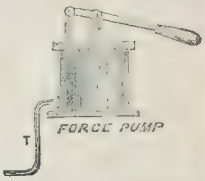
The annexed cuts show the arrangement; fig. 4 is a section of the rectilinear, and fig. 3 a section of combined iron and wood revolving shutters.

SELF-ACTING APPARATUS.—Where water can be obtained from the Water Companies' mains, or from a separate service at the summit of the building, the pump and its attachments will be applied to the cylinder and ram of the hydraulic lift, and the pressure is sufficient to raise the heaviest shutter. By opening a stop-cock the water is brought from the mains to the hydraulic cylinder, causing the shutter desired to open with its own great power. At the same moment the water in the cylinder is forced out, and passes into the cistern, which is generally placed in the roof. The quantity of water required to work the largest shutter is only six gallons per min. Any number of shutters or windows can be supplied by one cistern.



This apparatus is of a nature that secures to it a most valuable

HYDRAULIC LIFTS FOR WAREHOUSES, BANKS, WINE MERCHANTS, &c.



PROSPECTUSES, ENGRAVINGS, AND DESCRIPTIONS FORWARDED

A full-size HYDRAULIC SHUTTER can be seen in constant operation at the Works, where Architects and Builders are requested to inspect all Patents for themselves, and not attend to the false reports and misleading statements of others.

CAUTION.—Any person using Water Atmospheric Steam, or other Fluid Pressure, for raising or lowering Revolving Shutters, will be liable to an action for infringement of this Patent.

PATENT.

FORCE PUMP

CLARK AND CO.

15, GATE-STREET, LINCOLN'S-INN-FIELDS, LONDON.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, it is are unglazed easy, and when used in Green-houses no scorching occurs; its NON TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at 2 pence lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BUNNETT AND CO.

ENGINEERS, FOUNDERS, AND MACHINISTS,

No. 26, LOMBARD STREET, LONDON, AND DEPTFORD, KENT,

ORIGINAL PATENTEES OF REVOLVING IRON SHUTTERS,

AND OF THE

NEW PATENT CURVILINEAR REVOLVING IRON SHUTTER,

Which obtained the PRIZE MEDAL in the Great Exhibition of 1851.

The greatly increased demand, with additions to and improvements in their extensive plant and machinery, command of the best markets for material, and employment of extra skilled workmen, enable B. and Co. to supply this their superior Shutter at a price that effectually supersedes any of the cruder and more expensive and less extensive adoption has called forth.

REVOLVING WOOD SHUTTERS, of superior description, fitted with Metallic Hinges, and adapted to work in any required direction.

BUNNETT AND CO.

ARE ALSO THE ORIGINAL PATENTEES AND MANUFACTURERS OF

METALLIC SASH BARS AND MOULDINGS FOR SHOP-FRONTS, SKYLIGHTS, &c.

All works are guaranteed of the very best description, and are executed on their premises by experienced journeymen. They are respectfully requested, when in town, to inspect BUNNETT and CO.'S works, to see that the name is properly inserted in the specification, which is occasionally omitted from the omission.

Estimates, with all necessary information, and explanatory and detail drawings promptly furnished.

MOORE'S PATENT MOVABLE GLASS VENTILATOR, for Windows, Partitions, Factories, Workshops, Warehouses, Greenhouses, Conservatories, Halls, Churches, Orangeries, Hot-houses, Dwellings, Billiard-rooms, Dining-rooms, Bed-rooms, Drawing-rooms, Libraries, Studies, Parlours, Kitchens, Larders, Pantries, Cellars, Water-closets, Baths, Stables, Coach-houses, Harness-rooms, Granaries, Lofts, Cow-houses, Piggeries, Poultry-houses, Barns, Sheds, Cottages, Lodges, Entrances, Porches, Conservatories, &c. For Farms, Dairies, Outbuildings, &c. the Ventilator can be made to form a complete window, iron frames and rough plate glass, &c. Ventilators made to any size, and to suit all forms of sashes; also for skylights, and other purposes. A considerable saving, and additional safety by having fixed window-sashes.

MOORE'S PATENT "LEVER VENTILATOR," forming a regular current of air, so calculated to effect all that is required for improving animal and vegetable health. The vitiated air is carried at the ceiling left for that purpose. To sick-rooms they are particularly recommended, as from the capabilities of removing the air received by the sun in the sash and windows, they effectually preserve the stock in good condition and prevent evaporation of gas.

Clerk and House Clerk-makers to the Hon. Board of Ordnance, the Russian Government, and the Emperor of China.

Manufactory, Sckford-works, St. James's-walk, Clerkenwell, London.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATES, ISLE OF WIGHT,
HOME and EAST-INDIA COMPANY, and ROYAL BOTANICAL GARDENS, REGENT'S PARK,
And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at which the great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing, also used for under sides at the Royal Agricultural Society's House, in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to frost, snow, and heat, and a square foot of it can be sent by post. The best can be cut to any length, by inches wide. The price is ONE PENNY PER SQUARE FOOT. Samples, with full particulars as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c., is also manufactured. In all instances about 25 per cent. in fuel is effected. The TRADE are respectfully informed that the ROOFING and other PATENTS of F. McNEILL and CO.'s Manufactures, LAMB'S-BUILDINGS, BUNHILL-ROW, Rolls covered with the Felt to loosen at the Public Offices, the new Victoria Courts, the prisons and sheds leading to Westminster Hall, and other buildings at the New Houses of Parliament. A Liberal Discount allowed to the Trade.

SEYSSEL ASPHALTE COMPANY,
STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the
GENUINE SEYSSEL ASPHALTE
is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company.
J. FARRELL, Secretary.
N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being confided to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications,
"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"
and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas-tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

J. A. and CO. also beg to inform the trade that they have OPENED a WAREHOUSE at No. 80, OXFORD-STREET, where all goods can be obtained on the same terms as at the Factory.
GUTTA PERCHA PAPER FOR DAMP WALLS. J. A. and CO. are the sole vendors of this well-known remedy for Damp Walls.
115, Whitechapel, near the Obelisk, and 500, Oxford-street.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high pressure principle in all towns, WARNER'S HIGH-PRESSURE COCKS are recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 29.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 300 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is better than the common Cocks now in use.

Engerelled iron, self-acting, and other closets, upon economic arrangements, with plans for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth

PUMPS on HIRE.—The largest stock in England of small and double pumps, from six to double 12-in barrels, prepared for hand, steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street

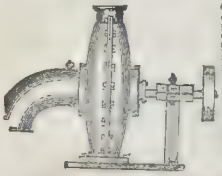
FARM AND COTTAGE PUMPS.

WARNER'S PATENT

CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump £1 15 0
Patent Pump, with 15 feet of lead pipe with head, bolts and nuts ready for fixing 3 0 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot Houses and Plant Houses, from underground water tanks, and can be readily fixed in any situation.



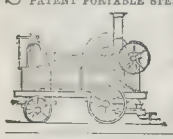
May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET,
LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade. An Illustrated Book sent on application post free.

CENTRIFUGAL PUMPS.



Contractors, Builders, Engineers, Paper makers, Brewers, Manufacturers, and all who may have water, or other liquids to raise will find it their interest to use these Pumps For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand.

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten horse power as wanted to fetch water, by the stack or month, for farming, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, Jamaica-street, Holland-street, Southwark, London.

STEAM-ENGINES, of various sizes, from

two horse power upwards, always in stock made on the most improved principles, and of the very best quality; made and fitted by first-class craftsmen always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery, made to order by ANDREW McLAREN and CO. Windsor Iron Work, Windsor-terrace, City-road, and 174, Upper Thames-street.

PUMPS.—Wanted, One 3-throw, 4½-Pump,

with brass boxes; One Double-acting, 5-Pump, with brass boxes.—Address price, &c P. Q care of Mr. Deacon, Bond-court, Walbrook

PATENT PORTABLE STEAM-ENGINES,

—CONTRACTORS and others may be supplied with MEDWIN and HALLS PATENT PORTABLE PUMPING ENGINES from 8-horse power to 4-horse power and upwards, either on hire, at a rental for any required period, or for purchase. These engines are adapted for pumping or other purposes. Several have been employed for years. A 25 horse power may be seen at work on MONDAY, TUESDAY, and WEDNESDAY next, between the hours of TWELVE and FOUR o'clock, at Messrs. MEDWIN and HALLS, Engineers and Portable Steam-Engine Makers, 92, Blackfriars-road, London.

FOR SALE, in consequence of the owner

making alterations and requiring more power, a capital 16 HORSE HIGH-PRESSURE STEAM ENGINE and Two Boilers; may be seen in full work at Mr. R. WOOD'S Sawing and Planing Mills, Wandsworth, Surrey.

GUTTA PERCHA TUBING.—May be

buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs on the square inch, with no bursting. The small sizes may be had in 50 feet and the larger in 25 feet coils. The patentees have also found it a good conductor of sound, it is most valuable for conveying messages in electric TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

PATENT VULCANIZED INDIA-

RUBBER TUBING, for Gas Fittings, Chemical Purposes, Fire Engines, Manure Pumps, &c.—JAMES LYNE HANCOCK, Sole Manufacturer (and Licensee), Goswell mews, Goswell-road, London, begs to invite the attention of Architects, Builders, Engineers, and the trade generally, to the Vulcanized India-Rubber Tubing, which is now manufactured from ¼ inch bore and upwards, in lengths from 50 to 100 feet, and of various strengths, suitable to the purpose for which it is applied. VULCANIZED HOSE for FIRE ENGINES, LIQUID MANURE, and for conveying HOT WATER to BATHS in DWELLING HOUSES and BREWERIES. Manufactured to resist great pressure of any length and size to order.

*** Testimonials may be had on application at the Manufactory.

N.B. VULCANIZED WASHERS and SHEET RUBBER of Steam and Hot-Water Pipes, and Packings for Pistons and Gland-Boxes of Steam Engines, cut any size to order

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES

BENDS, JUNCTIONS, TRAPS, &c. 28, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water Closet Pans, with Syphon Traps 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths

The great advantages attending the use of these articles are so generally understood, as to render any enumeration of them almost superfluous. The cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand fully proves the estimation superiority of our productions before the public for similar purposes

Inspection is invited to an assortment of Drain Tubes of every form and size, adapted to the various situations in which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and other glaze, for surrounding any other manufactured of Brown Stone Ware.

N.B. These are made without the discharge-hole being turned downwards.

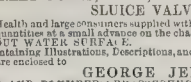
May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Dance's Wharf, foot of Battersea-bridge, Chelsea; Frazt Wharf, Kingsland, Regent's New Town; J. TURNER'S, South Wharf, Praed-street, Paddington, and at JOLLIFFE, Brothers, 33, Bridges-street Covent Garden.

Drawings and List of Prices will be forwarded free on application.

Boards of Health, Architects, and all persons interested in sanitary progress are respectfully invited to examine

JENNINGS'S PATENT IMPERISHABLE CLOSET,
STREET GULLY, YARD, STABLE, AND SINK TRAPS,
SLUICE VALVES, &c. &c.

Boards of Health and large consumers supplied with JENNINGS'S IMPERISHABLE WATER CLOSETS in quantities at a small advance on the charge usually made for the FILTHY HOPPER PAN, WITHOUT WATER SURFACE.



A Book containing Illustrations, Descriptions, and Prices can be had on application, or post-free if two stamps are enclosed to

GEORGE JENNINGS,
ENGINEER AND PLUMBERS' BRASSFOUNDER, 21, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

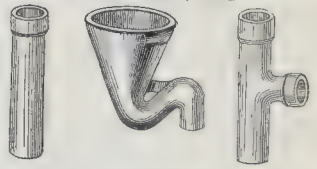
PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

SUPERIOR GLAZED STONEWARE
DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppages in the drains impossible.



W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Mill bank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—W. Peters's, North Wharf, Paddington.—C. Richardson's, South Wharf, ditto.—J. Erith's, Cambridge Heath Wharf, Hackney.—Mulwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

STAFFORDSHIRE POTTERY.—WILCOX, BARNARD, and CO. Earthenware Manufacturers, Mill-wall, Poplar. Closet-basins, urinals, bidet-pans, plug-seams, washhand-tables, beer-machine handles, closet-handles, basin-stools, &c. toilet ware, fancy jugs, paste-pots, &c. white, printed, and decorated, delivered carriage-free to wholesale dealers within five miles of London.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.
A DESIDERATUM in SLUICE-VALVES.
FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

VICTORIA POTTERY, LEIGH,
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

TO WATER COMPANIES AND PLUMBERS
DEVEY and DALE'S CYLINDER BALL-VALVE and BALL, Registered Oct. 28, 1853. No. 5,036.

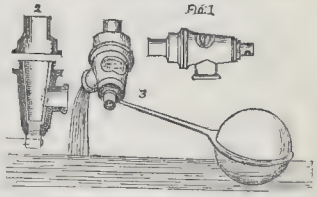


Fig. 1 represents the Cylinder Ball-valve in elevation. Fig. 2 is a Section of the Interior, showing the uninterrupted course of the Fluid. Fig. 3 shows the Cylinder Ball-valve in action.

This Valve is peculiarly suited to High pressure. The greater the weight of fluid, the more secure the Valve becomes, and the more effectually prevents waste.—Manufactured solely by DEVEY and DALE, 8 and 9, Shoe-lane, and may be had of respectable Plumbers.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for hanging. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO., Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors with the least and all staples complete for fixing at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world

OFFICES. Gate-head-on-Tyne.

COMPETITIONS.

TO ARCHITECTS.

THE BOARD of GUARDIANS of the Parish of PADDINGTON are desirous of receiving PLANS and ESTIMATES for EXTENDING the SIZE of the PADDINGTON WORKHOUSE, Harrow-road, to increase the accommodation from 300 to 600 inmates. The plans, &c. must be sent in to the Board before the 3rd day of MAY, addressed to the "Board of Guardians Paddington Workhouse," where a statement of suggestions for increased accommodation, and other particulars, may be seen. The plan selected by the Guardians will be subject to the approval of the Poor-law Board, and the Architect whose plan is adopted will be employed to superintend the works upon the usual terms.—By order of the Board.

CHAS. BROWN, Jun. Clerk.

Paddington Workhouse, Harrow road, March 23, 1854.

COMPETITIONS.

CHURCH of ENGLAND HOUSE of MERCY, CLEWER.—TO BUILDERS AND OTHERS.—Notice is hereby given, that PLANS and SPECIFICATIONS for ERECTING certain portions of a Building, to be called the "House of Mercy," at Clewer, near Windsor, in the county of Berks, will be lying at Mr. INGALTON'S Office, Datchet-lane, Windsor, from MONDAY, APRIL 3rd, until SATURDAY, APRIL 15th, inclusive, between the hours of TEN and FOUR. All persons desiring to C[illegible]ct for the execution of the [illegible] to send in sealed Tenders, directed to the Honorary Secretary, the Hon. and Rev. [illegible] A. HARRIS, 13, Clarence-crescent, Windsor, on or before MONDAY, APRIL 24th. The Building Committee will not bind themselves to accept the lowest or any Tender. The Contractor will have to enter into a proper bond, at his own expense, with two approved sureties, for the due performance of his Contract.

TO ARCHITECTS AND BUILDERS.

WANTED, PLANS and SPECIFICATIONS for a NATIONAL SCHOOL to be built at HORNCHURCH.—For particulars, apply to the VICAR, Hornchurch, Romford.—March 31, 1854.

NATIONAL FREEHOLD LAND SOCIETY.

TRUSTEES.

Richard Cobden, Esq. M.P. — Samuel Morley, Esq.
Charles Gilpin, Esq. — W. A. Wilson, Esq. M.P.

SURVEYOR.—James Wilson, Esq.
SECRETARY.—W. P. Whittingham, Esq.

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

HOUSES of various classes and values being required to be built on the following Estates, namely,

BARNET,
CAMBRIDGE,
COLCHESTER (2),
CROYDON GROVE,
ENFIELD,
GUILDFORD,
HADDENHAM,
MINSTER,
SUTTON,
TONBRIDGE,

The Directors will be prepared to receive plans and particulars of Houses suitable for the several situations, and Tenders to build the same.—Particulars of the Estate to be built upon, the Class of Houses required, and the conditions of building, may be had on application to me, personally or by letter, on and after WEDNESDAY, the 5th of APRIL next, and the Designs, &c. are to be sent in on or before WEDNESDAY, the 19th of MAY next.

JAMES WYLSON, Surveyor.

14, Moorgate-street, London, 22nd March, 1854.

CONTRACTS.

TO BUILDERS, CONTRACTORS, AND OTHERS.

NEWPORT and ST. WOLLOS BURIAL BOARD.—TENDERS are required for BUILDING TWO CEMETERY CHAPELS, Boundary Walls, Clerk's Residence, Entrance Gates, Gardens, Roads, laying out and fencing ground, &c. for the Burial Board of the parishes of Newport and St. Woollos, in the county of Monmouth. The drawings, specifications, &c. may be seen by applying to Mr. J. F. MULLOCK, the Clerk to the Board, on and after the 16th day of MARCH, at the Board room, Town-hall, Newport; and all further information may be procured on applying to the Architects, Messrs. JOHNSON and PURDUE, 9, John street, Adelphi, London. The Tenders will be required to be delivered on the 4th of APRIL, 1854. The Board do not bind themselves to accept the lowest or any Tender.

By order of the Board,
J. F. MULLOCK, Clerk.

Newport, Monmouth, March 8, 1854.

SMETHWICK CHAPEL.—To Builders.—Builders desirous of TENDERING for the ERECTION of a CONGREGATIONAL CHAPEL, at Smethwick, near Birmingham, may see the plans and specification at the Offices of the Architects, on and after the 24th inst. Tenders to be delivered on or before the 7th day of APRIL next, at the residence of the Rev. W. ARNOLD, Smethwick, sealed, and endorsed "Tender for Congregational Chapel." The lowest Tender will not necessarily be accepted. BIDLAKE and LOVATT,
March 20th, 1854. Architects, Wolverhampton.

BUILDER'S TENDER WANTED for ERECTING a small SIX or EIGHT ROOMED COTTAGE, at Ash, near Guildford, Surrey. (Two railways convenient, fares low; also canal carriage, excellent roads, brickfield near, sand on the spot). A job well done there is sure to lead to further orders as much building is in immediate contemplation. Lend to be Let for building remarkably cheap, only 2l. per acre with extensive frontages, and there is a very great demand for houses.—Address, G. WEAVER, 424, Strand.

CONTRACTS.

NOTICE TO BUILDERS.—ORDNANCE WORKS, SHEERNESS.—Persons desirous of TENDERING for BRICKWORK and CONSTRUCTING an EMBANKMENT, will be supplied with the Quantities, Plans, &c. upon application to the Storekeeper of Ordnance, Sheerness, on or before the 10th day of APRIL 1854, at which period addressed "To the Secretary to the Board of Ordnance," will be received "Tenders for Works at Ball Point." Default plans may be seen, and specifications from 1 Tender and all other Ball Point, between the hours of NINE and FOUR, daily, from the 1st of MARCH to the 24th APRIL, Sundays excepted.

Royal Dockyard Office, Deptford, March, 1854.

WARWICK LOCAL BOARD of HEALTH.—CONTRACT for DRAINAGE and WATER-WORKS. The Board hereby give notice that they are prepared to receive TENDERS from parties willing to CONTRACT for the [illegible] and Cast-iron Water pipes, including all Ingle-boxes, Bends, Sluices, and a Column, and sinking a Pump-well. Also for supplying a Wrought-iron Tank, and the construction of a Steam Power and other works. The contract, drawings, and specification may be examined at the Office of the undersigned, at Warwick, on or after the 22nd instant, where all copies of printed specifications of Tenders may be obtained. Further particulars will be known at the offices of Messrs. MARSHALL and DICKSON, Engineers to the Board, [illegible] Leam. Tenders must be sent in on or before the 14th APRIL next. No Tender will be entertained unless delivered in the printed form.

By order of the Board,
JAMES TIBBITS, Clerk.

Warwick, 21st March 1854.

BOROUGH of MAIDSTONE.—THE COMMISSIONERS propose entering into a CONTRACT with the Town Council for the ERECTION of a BUILDING, on the site of the house adjoining the Town Hall, Maidstone, and requested to send in sealed Tenders to the Town Clerk, addressed "To the Town-hall Improvements Committee," on or before FRIDAY, the 7th day of APRIL, 1854. Plans and specifications may be seen on and after the 24th instant at the offices of Messrs. ASHPITEL and WHICHCORD, Architects, 2, Lancaster Place, Strand, London, from whom all further particulars may be obtained. The Committee will not be bound to accept the lowest or any other Tender.

JOHN M. SCRATTON, Town Clerk.

GREAT WESTERN RAILWAY.—Contracts for Station Buildings at Wolverton, near Birmingham, and at Uxbridge. The Directors of the Great Western Railway Company will receive TENDERS for the BUILDINGS for ENGINE-HOUSES, &c. to be erected at Bordesley, near Birmingham; also for the Building a Passenger-station, Engine-house, and Goods Shed, at Uxbridge, in the county of Middlesex. Plans and specifications may be seen, and further particulars obtained, at the several Stations, at Paddington, at the Company's Offices, 24, Duke-street, Adelphi, London, and at the Company's Offices, Oxford. Sealed Tenders, addressed to the Secretary, at Paddington, on or before WEDNESDAY, the 5th April next.

CHAS. SAUNDERS, Secretary.

Public Conveyance Station, 15th March, 1854.

TO CONTRACTORS.

THE CORPORATION of NEWCASTLE-UPON-TYNE are desirous of receiving for consideration, TENDERS from parties willing to UNDERTAKE the SWEEPING and CLEANSING of all the public streets, lanes, alleys, and footpaths in the borough; also, for emptying all ashpits and [illegible]closets, and removing and [illegible] to be made by the Contractors, and the sweepings, scrapings, ashes, and other dirt. Such contract to be for a term of [illegible] years, to commence from such time as may be agreed upon. Persons tendering for the above work must state the sum they will give for the same per annum for the said term, or for what per centage they will undertake to supply it. A plan of the town and a specification of the work to be done, may be seen at the Town Surveyor's Office, up to SATURDAY, the 8th day of APRIL next. Sealed Tenders, indorsed "Tenders for Cleaning Streets," directed to the Sanitary Committee, will be received at the Town Surveyor's Office, up to TUESDAY, 2nd day of MAY next.

Newcastle-upon-Tyne, March 23, 1854.

TO CONTRACTORS, IRONFOUNDERS, AND OTHERS.

ROCHESTER BRIDGE.—The Wardens and Assistants of Rochester Bridge are prepared to receive TENDERS from persons willing to undertake to COMPLETE the REMAINING PORTION of the above BRIDGE in a fit and proper manner for the use of the public.

The Contract will include one Pier, one Centre Arch of 170 feet span, and two Side Arches of 140 feet span each, together with the waterway, masonry, brickwork, &c. required above the standing level of the arches, the foundations, piers, and abutments being already built to that level.

The estimated weight of cast-iron is about 2,500 tons, more or less.

Plans, drawings, and specifications of the intended work may be seen at the Office of Mr. JOHN WRIGHT, the Resident Engineer, in Strood, any working day, on and after MONDAY, the 6th of MARCH next, between the hours of TEN and FOUR, where any further information may be obtained.

Sealed Tenders for the above works, on the printed forms, are to be delivered at the Bridge Office, in Rochester, addressed to the Clerk of the Bridge, Tender for Superstructure of Rochester Bridge," on MONDAY, the 17th day of APRIL, 1854, at or before TWELVE o'clock at noon, after which no Tender will be received. Persons intending to tender must be prepared to enter into a bond, with two sufficient sureties, for the due performance of the Contract.

The Wardens and Assistants will not be bound to accept the lowest Tender.

ESSELL and HAYWARD.

Rochester, February 21, 1854.

[For remainder of Contracts see next page.

CONTRACTS.

TO CONTRACTORS

PLUMBIC ZINC.

MOREWOOD AND ROGERS'S PATENT PLUMBIC ZINC.

POSSESSES THE DURABLE QUALITIES OF LEAD, and not requiring to be more than ONE FOURTH AS HEAVY AS SHEET LEAD, is, with great ECONOMY and ADVANTAGE, substituted for that Metal FOR ROOFING, RIDGES, GUTTERS, FLOORING, and all other purposes to which Sheet Lead is applicable.

THE EXPENSE OF THIS METAL IS LESS THAN ONE-HALF THAT OF LEAD.

For further particulars, apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

STEEL-YARD WHARF, 87, UPPER THAMES-STREET, LONDON.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET-MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads, 1½, 6d.

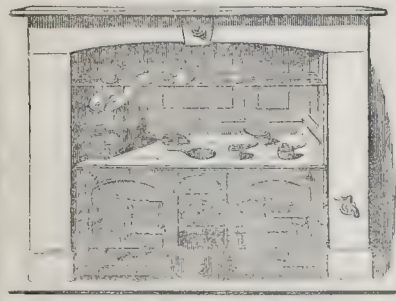
Best fine Cut Clasp and Rose { 1st 6d. 1½ 6d. 2 7d. 2½ 8d. 3 9d. 3½ 10d. 4 12d. per lb.

Sash Weights. Air Bricks, 3s. per doz. Hooping for bond, 19s. per cwt. Cast Lath, 11s. 6d. per cwt. Sash Pullies, 8s. 6d. per gross. Arno t's Ventilators, 4s. each. Elliptic Stoves with double backs, 21d. per inch.

Register Stoves from 5½. per inch.

Improved Self-acting Ranges with oven and boiler { 30 32 34 36 inch. 28s. 30s. 32s. 34s. each.

Best Self acting Ranges, with oven and boiler, wrought bars and bright fittings { 27 30 36 inch. 50s. 55s. 60s. each.



An extensive stock of bright and black Register Stoves in every variety of design at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger plates, Levers, and Bell pulls, on sale.

BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.

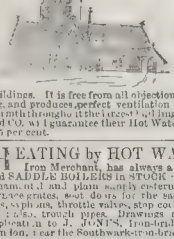
The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming Ironmongery can here select whatever they require at WHOLESALE PRICES.

WALMSLEY'S new Show-rooms are now open with a Modern and Choice Stock of General Furnishing Ironmongery unequalled in variety, and at unprecedented low prices.

FLAVEL'S PRIZE KITCHENER.

FLAVEL'S PATENT KITCHENER is strongly recommended for its simplicity of construction, and its economy and cleanliness in use.

The top forms a Hotplate, and the open fire removes many of the objections which are felt to close Ranges.



LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS,

WIGMORE-STREET, LONDON

WARMING by HOT WATER.—

J. WEEKS and CO. KING'S ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects., builders, &c. to their superior apparatus for warming churches, mansions, institutions, halls, mews and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the specific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Boyle, delivered at a meeting of the Architectural Society, wherein Mr. Rice shows that Trotter's hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

HEATING by HOT WATER.—J. JONES,

Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain ashpit doors, double doors and frames, fire-grates, oven doors for the same, flue doors, syphons, throttle valves, stop cocks, flange and socket elbows, &c. &c., trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-merchant wharf, No. 6, Bankside, London, near the Southwark-iron-bridge.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks and tiles, is obtained by the BOILEVE'S PATENT CALORIFIER, evaporating in twenty-four hours about 4 gallons of water, without adding the least fuel to any of the qualities of the most precious articles. The Calorifere works by heat only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of large store or wharf room saved, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood-paving Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vogan, Son, and Raymond, Deckhead, and several maltsters, millers, and manufacturers in London and country. Sample per post to T. BOILEVE, Engineer for French Flour Mills, Turbines, &c. 55, King William-street, City.

LOSH, WILSON, and BELL,

Dr. Arnott's Ventilators, 4s. 6d. each.

An extensive stock of iron, rod, hoop, and sheet iron.

Bright Wrought Grate Work always on hand.

WIRE STRAND FENCING,

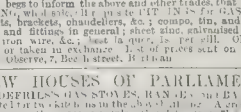
as erected by the Directors, by R. S. NEWALL and Co.'s own machinery, and under the superintendence of practical men, is the best, most economical, and the most durable fence for park and farm enclosures, or cattle purposes. It forms a perfectly uniform and sure fence (instead of any kind of hurdles), for road-side and all other fencing.

THE PATENT WIRE STRAND FENCE possesses an economy, security, and originality, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. to the Queen's Private Road, in the Great Park, in the Slopes and Home-park, at Windsor, has the inherent property of resistance, quality, and right, under any variation of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES, Gate-head-on-Tyne.

123, Strand, London.



164, Buchanan-street, Glasgow.

27, Lombard-street, Manchester.

GEORGE HART, 253, STRAND,

Near Temple-bar.

WHOLESALE, MANUFACTURING, AND FURNISHING IRONMONGER.

Proprietor and Manufacturer of Pitt's Patent Self-adjusting spindled Door Furniture.

List on application.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.

F. P. M'CARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades, that he is now SELLING, wholesale and retail, PATENT GLASS-WORK—pendants, brackets, chandeliers, &c.; compo, tin, and iron gas piping, and fittings in general; sheet zinc, galvanised iron, tin plates, zinc wire, &c., best gas coals, per cwt. Old metals bought, or taken in exchange. List of prices sent on receipt of stamp. Observe, 7, Beech-street, Barbican.

NEW HOUSES OF PARLIAMENT.—

DEFRIES'S GAS STOVES, RANGES, and BATHS, just completed for the above, and in the adjoining Houses. A great variety in stock for the same, at Defries' Show-Rooms, 29, Cornhill, and 5, Hanover-street, Hanover-square. Gas Cooking and Heating Stoves for all classes, from 10s. Defries's celebrated Dry Gas-Meters, 5s. 6d. each. Testing-cocks at the office, 1l. Recent Patent Manufactories removed to Hanover-road and St. Mildred's-court to more extensive premises, New-road, near Aldgate-street.

NAILS and IRONMONGERY, from BIRMINGHAM direct, Builders, Contractors, and Others, supplied with No. 8, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES. A complete LIST of which will be forwarded on application. FREDERICK HYTH, Nail Manufacturer and General Factor, Resort-parade, BIRMINGHAM; or at 16, Gresham-street, LONDON.

GAS FITTINGS, &c.—TO ARCHITECTS, SURVEYORS, AND BUILDERS.—Messrs. JAMES JONES and CO. 28, 29, and 30, Bird-street, London, are prepared to loan out gas and hot water apparatus for temporary purposes during the erection of buildings at a small per centage on the prime cost. Buildings in carcase fitted up with service and branch supplies for the distribution of gas and water in wrought iron tubing or otherwise, at the lowest competent prices. Every description of materials supplied at the lowest terms. Gasometers, Bath, Stove and Warm and ornamental brass work, gas burners and apparatus for cooking, heating, and ventilation in the greatest variety, and on most approved principles. Price lists sent on application, enclosing postage stamps.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

ACORN TIMBER WHARF, Canal Bridge, Old Kent-road.—RICHARD MAY informs the building public that his business in future will be carried on at Acorn Wharf. They are invited to inspect the stock of timber, deals, and all kinds of wood goods which are now ready for delivery.

Nursery and Jewell's Timber, from 75s. per load.
Dantzic and Riga Timber, from 8os. per load.
Gothenburgh, Yellow, 4s. 6d.; White, 4s. 3d. per 12 feet.
Christiana Deals, Yellow, 6s.; White, 4s. 8d. per 12 feet.
Christiana Battens, Yellow 2s. 10d.; White, 2s. 6d. per 12 feet.
Petersburg and Pan Planks, from 2s. 10d. per 12 feet.

Prepared Floor Boards, 3in. Yellow,	14s.	White,	12s. 6d. per square.
" " 2½ "	18s.	"	17s. 6d. "
" " 3 "	22s. 6d.	"	21s. 6d. "
" " 3½ "	26s. 6d.	"	24s. 6d. "

All other kinds of wood goods at equally reasonable prices, for cash. N.B. The extensive saw-mills now erecting on the wharf, are expected to be ready for work by the 1st of May.

BRASS WORK.—The advantages of direct communication with a bonâ fide Manufacturer are too obvious to need elucidation; to architects, builders, and the trade generally these advantages in their fullest extent are now afforded by C. JONES and SON, 36, Monkwell-street, City. TRELLIS and FRETWORK of every pattern and dimension. Rolland rail work for every purpose. The oldest house in London for door and stable furniture plates.

THOMAS EDINGTON, IRON MERCHANT AND CONTRACTOR, Inspector of Railway Ironwork Contracts, 17, GORDON-STREET, GLASGOW.

THE attention of Builders is directed to the important improvement in WEBB and GREENWAY'S PATENT DOOR HANGER BOLT, which is perfectly safe on the back, consequently can be fixed in much less time than the old tower or barrel bolt.

WEBB and GREENWAY also draw attention to their
Patent Brass Barrel Bolt.
Patent Brass and Iron Casement Stay and Fastener.
Patent Bullet-catch for Door Panels.
Patent Brass and Wool Knob Cupboard Turns, with reciprocating Spindles; Brass Gothic Drop ditto; China and Glass Knob ditto.
Secret Warwick Cistern Inlet, which keeps Water for Consols' Sole Rinze; Copper, Brass, and Steel Weaver's Mails.

The above can be had from all Ironmongers throughout the United Kingdom; and from the Manufactory, WEBB and GREENWAY, Brassfounders and Locksmiths, Steelhouse-lane, Birmingham.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL HOUSES, AND THE TRADE IN GENERAL.
WHOLESALE IRONMONGERY WAREHOUSE, 18, Blandford-street, Manchester-square (running out of Baker-street, Portman-square), where a large stock is always kept on hand for the exclusive supply of the trade to the JOHN LOWNDES, Birmingham and Wolverhampton Japan and Factor.

PLUMBING.—T. STANWAY, 10, Dorset-street, Portman-square, begs to inform the building trade generally, that he executes every description of Plumbing at the lowest prices; baths, closets, and every description of hydraulic apparatus fixed, and action warranted. Estimates for any quantity, in town or country.

THOS. B. LAWRENCE and CO. Zinc Dealers and Manufacturers, 10, York-place, Lambeth, have removed to their new premises, preselling SHEET ZINC, at 33s. per cwt.; Perforated Zinc, at 4d. per foot; Rain-pipes, 3in. 4d. per foot; Gutters, 6in. 6d. per foot and in proportion. Chimney shafts, Cowls, &c. equally cheap. Plumbo Zinc, 42s. Zinc Paint and Galvanized Iron Plates. A prize medal was awarded them at the Great Exhibition.

HOT-WATER APPARATUS of every description, suited for horticultural and every other purpose from dwellings. Improved boilers requiring no brickwork. Warm air and other drying apparatus.—Apply to PRIDEAUX and TAYLOR, Engineers, Battersea.

FOUNDRY AND IRON WORKS, 68, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.
GLOVER, BROS., solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, ornamental and general.

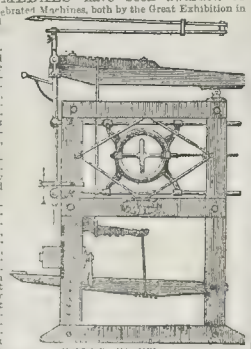
Patterns of Girders, Columns, Balconies, Railing, Ornamental Cart-gates and Park Gates, Lamp and Street Posts, Tanks, Pipe Work, Pillars, Lamps, and steam engines, &c. &c. Hot-plate Metal. An improved Soot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Floors, Bedsteads, Cisterns, Tanks, and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVER BROS. IRONWORKS, 168, DRURY-LANE, and CHARLES-STREET.



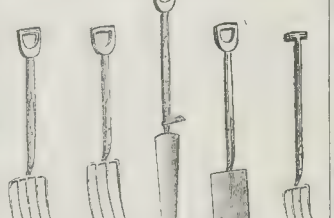
IRON FOUNDRY, 80, Goswell-street (late of 14, Brunswick-row, Queen-square).—JAMES BARNES has made great additions to his STOCK of PATTERNS, begs to inform the Trade that he is now able to supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Plates, Iron Staircases, Cast Balconies, Rails Patenting, Lamp and other Brackets, Cantilevers, Newel Pipe Water Closet Work, Area Gratings, Fly and Spur Wheels, Wheel Plates, &c.

BARKER'S OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders Pumps, and all descriptions of Gas Apparatus. Gas works erected complete. Also manufacturers of Corrugated and all kinds of Iron for Railway Stations, Sheds, Warehouses, &c. &c. executed in the most reasonable terms. Cast Tanks, Screw and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Side Valves, Cross Bars, and Screws, and bolts, and Nuts, of all sizes, kept in stock.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK.
Sole Manufacturer of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, leaving them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.
PRIZE MEDALS have been awarded to these celebrated Machines, both by the Great Exhibition in London, and many other Exhibitions.



They are extensively used throughout the United Kingdom by joiners, contractors, cabinet and pianoforte makers, carriage and waggon builders, mahogany merchants, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, grooving, morticing, rebating, sawing, and boring. These operations are in every respect performed either in hard or soft wood, equally well from full parts, as may be obtained.

Wood may be WILLIAM FURNESS, Patentee, 20 Lawson-st. Liverpool from whom full particulars may be obtained.

KITCHEN RANGES.—BROWN and GREEN'S Patent Economical Range, patronised by the Hon. Corporation of Trinity House, is a certain cure for a smoky chimney. It will roast, bake, boil, &c. in a very superior manner, with a great saving of fuel. The Improved Open Fire Range, with Brown's Patent Radiating and Ventilating Oven, is highly appreciated. For baking bread, meat, or pastry, it is unrivalled. Self-acting Oven and Boiler Ranges from 15s. to £5 each. Prospectuses and price lists sent forwarded on application to the Patentees, BROWN and GREEN, Luton, Beds. At all wholesale furnishing.

IRONMONGERS AND MANUFACTURERS.

TO BUILDERS, CARPENTERS, AGRICULTURISTS, AND GARDENERS.
BENNETT and NAYLOR, GENERAL IRONMONGERS and FACTORS, Sole West End Agents for PARKES and Winton Parkes' celebrated STEEL DIGGING FORKS and TOOLS; also for the only efficient STOVE, with or without a Flue, suited for Greenhouses and Conservatories, patronised by her Majesty, made from 12s. upwards, at the Great Western General Furnishing Warehouse, 25, Oxford-street, corner Park-street, and No. 1, Lisle-street, established for the sale of all kinds of useful Ironmongery at wholesale prices. Sheet, Hoop, Rod and Bolt Iron. Locksmiths and Bellhangers.

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico.—All works of art in the various metals executed at the above foundry.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fireproof construction has been most extensively applied, and its application further extended to meet EVERY DESCRIPTION of BUILDING, whether public or private.
The maximum of ECONOMY, with great simplicity of construction, effect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or cast iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the flat ceiling presenting a perfectly level and even surface, forming a fire-proof foundation adapted to receive a finished surface, as that of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even to ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York buildings, Adelphi.

CAST-IRON WATER-PIPES.—TO BE SOLD by PRIVATE CONTRACT, in convenient lots, the undermentioned new CAST-IRON SOCKET WATER-PIPES. For particulars apply to THOMAS GOODMAN, 38, London-road, Gloucester.—250 yards of 12-inch diameter socket-pipes, about 210 lb. per yard; 2,700 yards of 8-inch diameter socket-pipes, about 125 lb. per yard. A few Bends and Branch pipes of each description. The pipes are new, and are now lying at Gloucester, convenient for delivery to the Great Western, Midland, and South Wales Railways.
Gloucester, March 17, 1854.

TO BUILDERS, CARPENTERS, &c.
THE following are the present Prices of IRONMONGERY, at YOUNG and CO.'S, 29, Duke street, Grosvenor-square, all other articles in the same proportion low.
Cut Clasp, 4d.—6d.; 7½d.—9d.; 10d.—1s. 7d.; 20d.—2s. 4d. per 1,000.
Patent Line, No. 3, 3s. 6d.; No. 4, 7s.; No. 5, 8s. per gross.
Jun. Mortice Locks, Brass Furniture, 3s. 6d. each.
6 in. ditto ditto, China Furniture, 3s. 6d. each.
Bath or Sash Pulleys, for Sash Frames, 1s. 9d. per dozen.
Cast Butts, 2 in. 1s. 0½d.; 2½ in. 1s. 4d.; 3 in. 2s. per dozen.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Barracks, the Penitentiaries, the Pentonville, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Preston, Barracks, Hospitals, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley street, and Messrs Brabys, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—Mr MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelled Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, trusts that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronise his establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear.
N.B. The Tariff for 1854 is now ready.
Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Lining, Skirting, Roofing, Malting Floors, Patent Ridge and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand. Price-lists may be had upon application, either personally, or by post. Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey wall, London.
N.B. Wharf opposite the Warping Entrance of London Docks.

ABERDEEN and PETERHEAD POLISHED GRANITE.—Chimneypieces, Monuments, Columns, Pedestals, Vases, Monolithic Shafts, executed on the shortest notice, and at the lowest possible prices, on application to JAMES WRIGHT, Manufacturer, 12, John street, Aberdeen; or A. and F. S. MANFIELD, Granite Merchants, 3, Trinity square, Tower-hill, London.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto; rubbed and tooled sills, Harehill and self-faced slab; rubbed York paving, pavements, &c. all at law prices. Builders and masons are invited to inspect a stock free on application to E. and W. BURGE, Bridge-wharf, City-road. Established 1821.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-park basin.

London, 8, John-street, Adelphi.

CAEN WHARF, ROTHERHITHE.—GATES and GEORGE beg to invite the attention of Builders, Parents, and Stone Merchants to their Stock of York-shire PAVING, and several hundred tons of Landing and Details for Architecture. Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

BANGOR WHARF, King's-road-bridge, Camberwell.—STRINGFIELD and COOPER, late W. W. Rawson, beg to call the attention of Builders and others to their stock of Bangor slates, with plaster, Roman, Penrhyn, and various other, Welsh slates, Broseley tiles, Derbyshire and Yorkshire stone, pan and ridge tiles, glazed sewer pipes, close pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined Marbles, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.—Office, 8, Crescent-terrace, Millbank, Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST END DEPOT for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

TO BUILDERS, MASONS, AND CONTRACTORS.
OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Earl-street, Holywell street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

NEW PATENT MARBLE CHIMNEY-PIECES.—Messrs. BARRY and SON, of Scarborough, invite builders and the public to inspect their new Patent Marble Chimney-piece, which for variety of kind, and perfection of manufacture, cannot be surpassed. Marble merchants and others have been unable to distinguish them, when fixed, from real marble. Sample chimney-pieces may be seen, priced sheets of designs, and all necessary information may be obtained at THOMAS RICHARDSON'S, 113, London-wall, Sole Agent in London for the sale of the same.

Medieval Works, Memorials, Fonts, Screens, etc.

AT A VERY ECONOMICAL RATE.

SAMUEL CUNDY, Mason and Builder, PIMLICO MARBLE and STONE WORKS, Belgrave-Wharf, Lower Belgrave-place, Pimlico.
MARBLE CHIMNEY-PIECES manufactured by improved machinery. The public are invited to view the stock, unequalled for quality and price.
A GOOD MARBLE CHIMNEY-PIECE FOR FORTY SHILLINGS.
A liberal discount to the Trade.
MARBLE WORK in all its branches, at a remarkably cheap rate, for HALLS, DAIRIES, LARDERS, &c. &c.
Circulars sent on application.
N.B. The "Royal Blue" limestone passes the Works every ten minutes from thence Bath.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Herehill, Park Spring, and other stone, in blocks, slabs, landings, and head-stones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarry Proprietor, Quai des Abattoirs, Caen, and at 6, Red Lion-street, Borough-market. Contracts taken for any quantities. Cargoes shipped to order from Caen to any port.

GATES and GEORGE, late LUARD, BEEDHAM, and CO., Caen, Aubigny, and General Stone Merchants, Caen Wharf, Rotherhithe, London. Goods delivered to order, by land or water, every-where, and ship to any part of the United Kingdom.

SERPENTINE MARBLE of choice quality ON SALE, in blocks and slabs, at moderate prices.
THOMAS JACKSON, Commercial-road, Pimlico.

SCAGLIOLA done on an improved principle. I refer to the Gothic Arch done by D. DOLAN, which gained the only Prize Medal awarded for the manufacture of Plaster Work in the British department of the Great Exhibition in 1851.—Specimens to be seen at 162, Drury-lane, two doors from Holborn, with a choice collection of ornaments for buildings. Terraces for shop-fronts, always ready. Superior royal coats of arms at half the original cost.

BATH STONE.—HENRY STONE begs to inform Builders, Contractors, and Others, that he still continues to supply the best BOX HILL GROUND, and Lodge Hill COMBE DOWN STONE, on the most reasonable terms.
H. S. also begs to call particular attention to a Quarry he has lately opened on Hampton-down, near Bath, where he has some beds of Soft White Stone, of a very superior quality, and adapted for either exterior or inter or purposes.
Ashlar and Sawn Rauge Stone cut to order. Carcases shaped and delivered to any part round the coast.
Residence, Widcombe, Bath.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.
TWO superior descriptions of GRAVEL, one for Concrete and the other for Road-making, may be had upon application at the Office of the Park Estate, Plumstead, near the Royal Arsenal, Woolwich. Price 3s. 6d. per yard. Delivered into barges alongside Woolwich.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand, a fine Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL 1 SEPARATED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S late W. Cleave's Flooring Manufactory, Wilton-road, Pimlico Basin.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash.

3-inch Yellow, 17s. per square.		4-inch White, 19s. per square.	
¾-inch "	18s. "	¾-inch "	17s. "
1 inch "	22s. "	1-inch "	21s. "

Dantzic Timber, 8½d. per load.
Mouldings by machinery in very great variety.
ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine cut Stuff, Sawing, Battens, Pantile Laths, Oak Plank, Sash Gills, &c. Timber of all kinds, Planks, Deals and Battens, feteled from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial road, Pimlico, London.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the London, that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark bridge Wharf, Bankside.

SALE of OAK TIMBER, Hainault, Essex, by order of the Hon. Charles Gore, Commissioner in charge of her Majesty's Land Revenue.—TO BE SOLD by TENDER, in Four Lots, a large quantity of very valuable OAK TIMBER, comprising upwards of 7,500 trees, together with their top, lop, and bark, many of them being of large size and well adapted for navy and general purposes, as now standing on a portion of the Queen's allotment within Hainault Forest, which is eligibly situate for water carriage by the river Thames at Barking, or by railway, being about four miles from the Romford and Ilford Stations on the Eastern Counties Railway, and about ten miles by the high road from London. Sealed Tenders will be received at the Office of Woods, 1, Whitehall-place, Westminster, on or before MONDAY, 10th APRIL, 1854.—Printed particulars and conditions, with form of Tender, may be had on application at the Office of Woods; of Mr. JOHN CLUTTON, 8, Whitehall-place; or of Mr. MOODIE, at Hoghill-house, Hainault, who will show the timber.
March 15, 1854.

SALE of OAK TIMBER, Sussex.—Poynings Wood, five miles from the Hassocks Gate Station of the London, Brighton, and South-Coast Railway, and seven miles from Brighton, by order of the Honourable Charles Gore, the Commissioner in charge of her Majesty's Land Revenue, TO BE SOLD, by TENDER, in Five Lots, 844 OAK TREES, together with 28 Ash and other trees. The timber is adjoining good roads. The oak is of large dimensions, and well adapted for ship building. The ash is also large. Sealed Tenders will be received at the Office of Woods on or before THURSDAY, APRIL 6, 1854.—For particulars and conditions of sale apply to the Office of Woods, 1, Whitehall-place, Westminster; or to Mr. JOHN CLUTTON, 8, Whitehall-place; or to JAMES HOLLINGDALE, the Woodreeve, at Poynings, near Hurstpierpoint, who will show the timber.

PADDINGTON TIMBER-YARD SAWING, PLANING, and MOULDING MILLS, 1, Ironcare's Wharf, Praed-street, Edgware road, near the Great Western Railway Station, and abutting on the Grand Junction and Regent's Canals, affording the advantage of railway and water carriage.
GEORGE W. FRY, in returning thanks for the liberal support received by the late firm of W. R. Fry and Son, begs respectfully to solicit a continuance of the same, and calls attention to his large and well seasoned stock of Flooring Boards, Matched Boarding, and Mouldings, of every description, prepared in a superior manner from the best goods, at the lowest remunerative prices.
GEORGE W. FRY can also offer every advantage to purchasers of any description of Timber and Deals. The extensive Mills afford convenience for immediate conversion on the most moderate terms. All sawn and prepared goods delivered free to any part of London, or carefully packed and delivered at any railway station in town.
G. W. F. has published an enlarged and improved sheet of Moulding Designs, which will be forwarded, with prices of flooring, &c. post-free, on application.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvedere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.
1st January, 1854.

TIMBER-SAWING MACHINERY.—WANTED to PURCHASE, a small VERTICLE FRAME, for sawing planks or deals, 18 inches deep by 6 or 8 inches thick.—Addre s with particulars to X. Y. Z. Office of "The Builder."

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 8s. per gallon. Varnishes for W SAYLOR'S Stains may be had at the Factory, 45, and 56, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

R. E. HODGES'S PATENT INDIA-RUBBER ACCUMULATORS. (See Class 28, No. 72, and Class 8, Nos. 9 and 20) Great Exhibition, 1851.—A new MECHANICAL POWER obtained by the accumulation of elastic force, in which the accumulated force, suddenly set free, becomes a PROJECTILE FORCE, and is then applied to throwing harpoons and other missiles, balls, small shot, arrows, bolts, spears, &c. SIMPLE Accumulators are made from 1 to 40 lbs. power, and COMPOUND Accumulators from 1 to 500 horse-power, and of lengths to work through any distance. The COMPOUND Accumulators, each a foot long and weighing 160lbs. will suspend two tons. An important peculiarity of the NEW POWER is that may be accumulated easily, at any convenient time, and applied INSTANTLY under any circumstances required.
A peculiarity of this Patent is the application of A NEW METHOD OF FASTENING THE ENDS OF THE INDIA-RUBBER, the only perfect one by which it can enough ever can be effectually made available, and by which it can be stretched to SIX TIMES its normal length for working purposes, while it can be attached with the same facility as a rope to other bodies. The Accumulators are light, and are not affected by climatic temperature or water. They may either be applied to one extremity, or at d'appui or distributed among many pulleys, each bearing a mule, or it the of the strain may be desirable, and vice versâ, a body to be moved may have the lifting strain distributed over its parts in any proportion necessary. It will thus be found extensively useful in SHIPS, in MACHINES for MECHANICAL purposes in WORKSHOPS, &c being capable of doing much new done by METAL SPRINGS, an infinite variety of other work which has NOT HITHERTO BEEN ATTEMPTED.
The Accumulators will be found to be of great use for—
Moving heavy Bodies, especially those which are fragile.
Driving Machinery, Screw Propellers, &c.
Erecting and Fitting Machinery, &c.
Setting Stone-work.
Refers in Railway Tunning.
Hauling-off Stranded Ships.
Raising sunken Vessels, and other property.
Easing strain in Ships' Cables, Standing Rigging, and Tow lines.
Ditto on Boats towed astern or alongside.
Docking, Undocking, and Warping.
Cut me in the Whale.
And for the working of Craft which are short-handed.
Throwing Ropes from Ship to Shore.
Assisting the Emigrant.
Deep Sea and other Fishing.
Slinging Horses and other valuable animals, especially in cases of fractured limbs; also for shipping and landing them safely.
Preventing jolt, jar, shock, and vibration in most all cases in which Springs are now applied.
Applications to MECHANICAL and PROJECTILE purposes may be seen at the Warehouse of the Patentee, RICHARD EDWARD HODGES, 44, Southampton-row, Russell-square.

R. E. HODGES'S PATENT ACCUMULATORS applied as SPRINGS TO DOORS.
Size A, for half doors, and light doors. 1s. 2d. each.
" B, for ordinary sized doors, 1s. 6d. do.
The price includes hook, screw, and directions how to fix. Extra sizes at higher prices.
N.B. An allowance to Merchants and Traders.
See ADDRESS in the preceding advertisement.

W. TAYLOR and SON, PLASTERERS and MODELLERS, No. 47, Whittlebury-street, Euston-square, beg to inform all those who require sound and well finished PLASTERING and effective MODELLING that they are now ready to execute the same at very low prices, in town or country. ORNAMENT only executed with any material on the shortest notice.
N.B. A large collection on view.

CAUTION.—BEART'S PATENT PERFORATED BRICKS.—Mr. ROBERT BEART, the patentee, to prevent complaints of proceedings being taken to stop the making of Perforated or Hollow Bricks with a series of holes, without his license, hereby declares his intention to proceed against all parties infringing his patent without further notice.—Applications for licenses to be made to, and information obtained of W. J. and G. BOULTON, Solicitors, Northampton-square, London.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 931, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS.
MAW and CO. send free, per post, their NEW BOOK OF DESIGNS,
with prices, adapting this most durable, economical, and decorative production of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient building.
BENTHALL WORKS, near Broseley, Shropshire.
Specimens at 11, Aldersgate-street.

200,000 PLAIN TILES for SALE, very dense, thick, and well-burnt, made by machinery suitable for flat or other roofs; also a quantity of Stoneware Pipes from 4 to 12 inches in diameter, equal to any made in London, at less prices. Apply to JOHN ROBERTS, Upnor Pottery, near Rochester, Kent.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
YELLOW and PALE MALM SECONDS, CUTTERS, PAVIORS, SHIPPERS, &c. &c.
KENTISH RAG-STONE at a considerable reduction in price.
Apply to Mr BENJ. GOUGH, 67, Newington-crescent, Newington Butts.

GREAT EXHIBITION 1851, Class 27, No. 111.—JAMES LUFF, Manufacturer of all kinds of Ornamental Bricks and Tiles, Red and White, of the best quality, suitable for chimney-shafts, ridge-crests, cornices, and mouldings of every description, TUDDENHAM, IPSWICH.
N.B. Builders furnishing detail drawings can have all sorts of ornamental designs executed; a small additional charge made for the moulds.

BRICKS! BRICKS! BRICKS!—PARK ESTATE BRICKFIELDS, near the Royal Arsenal, Woolwich.—Price for the present Month, and until further notice:—Stocks, 30s.; Place, 20s. per thousand. Ready money on the field.
February 20, 1854. L. DAVIS, Proprietor.

BRICKS from COWLEY and KENT. Also WHITE, YELLOW, and RED FACING BRICKS.
BLUE VITRIFIED BRICKS;
Fire Bricks, Lumps, and Tiles.
CHARLES RICHARDSON, 8, SOUTH WHARF, PADDINGTON.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects, a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Countinghouse, Hoxton Brickfields, near Kingsland-road, near the Rosemary Branch, Hoxton.
N.B. Lighter-laired Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—300,000 good Kiln and Clamp BRICKS TO BE SOLD, to be delivered on trucks at the Brick-kilns or wharf of either station on the Eastern Counties or Eastern Union lines. For samples and price apply to Messrs. BULLARD, 89, Great Tower-street, London.

ROBERT'S PATENT BONDED HOLLOW BRICKS, MOON'S PATENT CHIMNEY BRICKS (for circular flues) can now be had, by application to GEO. MORRIS, Falcon Brickfields, Battersea, Surrey.

ASHES and BREEZE FOR SALE, in large or small quantities, by the undersigned contractors, POLAND and HUDSON, High-street, Bow, Middlesex.

DUTCH CLINKERS can be had in REGULAR SUPPLY, of P. VAN KEMPEN, Importer, West Ham, Essex.

TO BRICKMAKERS
FOR SALE, 2,000 CHALDRONS HOUSE ASHES and BREEZE, and 1,000 GAS BREEZE. The house ashes sifted from Newington, Lambeth, Kentish-town, and Pentonville, and is screened stuff. Also, 1,000 LOADS of STRAW. Apply to J. A SMITH, Contractor, Newport street, Lambeth-walk. J. A. S. has Three One-thousand Brick Carts to Sell, a bargain.

J. EASTWOOD and SONS take this opportunity of informing their customers that they have purchased of Mr. Isaac Parry his well-known Brickfields, in Queen's-road, Peckham, where they will be happy to execute orders for Bricks to any part of London early in June next.
Bricklayers road, Lambeth, March, 1854.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.
H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.
These Pencils are prepared in various degrees of hardness and shades.

H H H for drawing on wood.	F F light and shading.
H H for architectural use.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
M medium.	B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852.—In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker."
N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

Now ready, 4to. cloth, gilt edges, 25s.

ILLUSTRATIONS OF ANCIENT ART,

The Builder.

SATURDAY, APRIL 1, 1854.

WE would say a few words about steam naval architecture. In the year of our Lord 1663, Sir William Petty "invented his double ship, against the judgment and resolution of all mankind." It was built on two keels, its burden was thirty tons, and it carried thirty men, with as good accommodation, or rather a great deal better, than any other ship of her burden. The wiseacres of the second half of the seventeenth century boded no good of the enterprise. When the *Experiment*, as she was named, put to sea for a trip, from which she did not speedily return, owing to bad weather, their comments were somewhat in the ordinary style of noodledom, viz. — "that nothing better could be expected." But the *Experiment* returned. Some thought so highly of her capabilities, that they called her *The Pad of the Sea*. And although she was eventually lost in a great gale, it was in company with some seventy other sail. There was nothing in this to boast against her. Still because she was lost, and the king thought her model unsafe, the adventurous knight who p'anned the craft was obliged to content himself with offering to wager against any ship in the world, and flinging down this challenge,—"I only affirme that the perfection of sayling lies in my principle, finde it out who can."

We have referred to this little episode in the ancient annals of marine enterprise chiefly for one purpose. Many of those most ingenious deductions of science and combinations of mechanism now in every-day use in our naval power have been brought into operation "against the judgment and resolution of all mankind."

We sometimes laugh at our German brethren for their prosy attention to "the unities." Two of them, at all events, we shall not violate in the following remarks. After the late great demonstrations at Spithead and elsewhere, the time is appropriate, and our columns a fitting place, for a rapid glance at the works and workshops of two firms, whose talent and enterprise have matured, and brought to the highest pitch of perfection in execution, the motive power in marine mechanism reflecting even a fresh lustre on our national repute. "Engined by Maudslay,"—"Wm. Penn and Sons, Engineers, Greenwich,"—are now words so European in celebrity that they are the emblems of that solidity, precision, and elegance of workmanship which are at once the desiderata and characteristics in first-class naval architecture. In looking over the establishments, and glancing at the operations of these two great metropolitan houses, we neither ignore nor undervalue the fame and labours of the eminent engineers of the Clyde and other ports. We rather take these we have named as "representative men" in the front rank of a class the most energetic and scientific of any in our busy island.

And first let us glance, somewhat in catalogue-fashion, for our space forbids anything more detailed, at the early days and rapid growth of steam navigation. We shall quote some remarks and statistics, both on that and other points, from Mr. Dodd's brief but accurate and interesting paper, "A Ship in the Nineteenth Century."*

"What a scene has half a century witnessed in this matter! It was about 1784 that two Americans, Fitch and Rumsey, exhibited two boats, which were slowly propelled in the water by steam power—a humble beginning of a great system. It was in 1788 that Symington, and Miller, and Taylor applied steam-power to work a paddle-wheel; while in the following year they were the first to attain a steam-boat speed of seven miles an hour on the Forth and Clyde Canal. It was in 1802 that Symington first drew a heavy load along a canal by steam-power. It was in 1807 that a steam-boat first plied for traffic from Albany to New York, on the Hudson river. This boat, the *Clermont*, was constructed by Fulton, and was of so great burden as 160 tons. It was in 1808 that a steamer first ventured on a coasting voyage, which Stevens made from New York to the Delaware. It was in 1812 that the first passenger steamer plied in Britain: this was Henry Bell's little boat, the *Comet*, of only 25 tons burden, and 3-horse power: it carried passengers up and down the Clyde. It was in 1813 that a steamer first made its appearance on the Thames, as a passenger-boat between London and Gravesend; and it was in the same year that a steamer first braved the rough seas of our coast in a voyage from Glasgow to London. By the year 1818 there were forty-six steamers plying in the twelve rivers—Clyde, Forth, Tay, Treat, Tyne, Humber, Mersey, Yare, Avon, Severn, Orwell, and Thames; and about the same time the steamers in the United States exceeded this number. It was in 1818, too, that the first regular trading over-sea steam navigation commenced, by the placing of the *Rob Roy* on the Greenock and Belfast route; although the English Channel, the Irish Sea, and the German Ocean, had all been crossed by steam before this date. It was David Napier, of Glasgow, who took the lead in steam navigation between 1818 and 1830, and his cousin Robert, who has since taken up this honourable position. It was in 1838 that the problem of Transatlantic steaming was effectually solved by the safe voyages of the *Great Western* and the *Sirius*; and in the fourteen years which have subsequently elapsed, the progress of steam navigation has been truly astonishing—little less so than that of its sister-system, the railways."

Just forty years ago, therefore, when we concluded that great pacification which is now threatened with rupture, our navy was in a very different state as compared with the magnificent aspect which it presents at the present moment. Then (1814) there were only three small boats in the whole kingdom with the appliance of steam. When the peace was concluded, there was, fortunately, an active and shrewd surveyor of the navy. Sir R. Seppings commenced that radical practical reform which has led to so many excellent results; and in 1832 he was worthily followed by Sir W. Symonds. From 1818 we must date the new era in naval matters. It was then that the *Savannah*, with an American captain, ploughed the Atlantic by the help of steam, having first made for England, and thence up the Baltic to St. Petersburg. Seven years more and railway travelling had gained ground, and shortly afterwards steam was applied both in our mercantile and war marine. The new power materially affected the shape of the ships. The old tub principle did not suit, and we went back to the old model of the ancient galleys, which were propelled by oars. The mechanical force we apply, whether by the paddles of a wheel, or the feathers of a screw propeller, acts in the same direction as the oar, that is, longitudinally.

The manufactory of Messrs. Maudslay, Sons, and Field is situated in the Westminster-road, near Lambeth. The ranges of shops cover an area of about five acres, and the firm are now employing about 1,000 men, at an average range of 30s. per week. Without looking at the amount of materials consumed, a weekly expenditure of this nature is of itself an evidence of the magnitude of the operations carried on. Within doors the display is equally great of the capital lying around in the shape of tools. The works may be roughly divided into six compartments:—1. The carpenters' or pattern shop; 2. The foundry; 3. The smiths' and vice shops; 4. The turnery; 5. The fitting-room; 6. The boiler-shop. In each you behold the most refined appliances of art in the shape of mechanism. Here the uninitiated may see the building of one of those triumphs of modern industry,—a pair of 500 horse-power marine engines.

The gigantic size and enormous height of some portions, the unwieldy, and apparently unworkable, fragments of others, the multitude even of the component portions, all so exquisite in fit and finish, strike the spectator with the liveliest impressions of admiration and even of wonder. Omitting here the carpenters' shop devoted to the preparations of wooden patterns, and the compartment where an incessant din proclaims the manufacture of the tubular boilers, we may begin with the foundry. Scattered around are the furnaces for the preparation of the metal: in the midst are all the requisites for the moulder; and the artisans, single and in gangs, are engaged in their separate tasks. Down in a square pit one clay architect is busy with a mould for one of the huge cylinders, perhaps from 3 to 4 feet in diameter. The outer shell or fortalice is of brick: inside it is most elaborately formed of fine loam. Slowly and carefully this process goes on. The mould is a most important thing: much depends on the skill with which it is formed, and on its being properly dried, and after all it is useless when it has once performed its duty: hence a large casting is a proceeding demanding the utmost care and all the skill which experience can afford. Sometimes, although not often, a trifling or unforeseen circumstance will vitiate an important casting, and thus cause a double loss. There is much waste of valuable labour, and matters are retarded by a loss of time from the necessity of beginning again at the beginning. As we cannot wait on a casting, let us follow such a huge bulk as a cylinder weighing perhaps 5 tons, which has already been removed to its delivering-room: by this we mean the turnery; and from this point we shall refer to the contents of it and the other shops indiscriminately.

Of course a casting, when free from the mould, is only in the rough; it wants smoothness and precision. Now the inside of a cylinder, considering, as it does, the steam, and having a piston in it, which must be steam-tight, demands great accuracy. In the turnery you notice lathes of every size and power, fit to scrape anything from the most Lilliputian nut up to the cylinder which we have especially under review. It now stands on a low pedestal, between the jaws of a massive lathe, the very mandril of which is as thick as the waist of a modern dandy. Here a series of cutters are introduced into the interior of the cylinder. The machinery revolves, and with a slow, steady, remorseless progress, the cutters go round, shaving off a certain thickness of the rough internal surface of the metal. The next cut is much finer; that is, the tool takes less grip, and leaves the surface smooth and accurate from top to bottom. All around is the whirring of the gear of the machinery, varied only by the dull groaning of the sharp tool tearing away portions of the metal upon which it is set. Iron undergoes the process without emitting any very disagreeable sound. Gun-metal (hard brass), on the contrary, may always be recognised by the peculiar rasping noise with which it is removed. In this department also may be seen the ponderous connecting-rods and the large brass air-pumps undergoing the several processes of dressing which are necessary to fit them for their place.

There are several prominent characteristics which distinguish all large engineering work-

* London: Geo. Routledge and Co.

shops, but which are in none more apparent than in those now under consideration. Even those least interested and informed concerning the processes and manipulations of iron manufacture cannot inspect these without acknowledging the perfection of the arrangements, by which large masses of metal are swung, and made to spin about in the jaws of the large instruments, which shave and polish them so ruthlessly. To those who appreciate the persevering, scientific skill, which has brought such powers to their present excellence, there is something to admire at every step.

In every department the *best* machinery is to be seen. An indifferent tool is not tolerated. For forging purposes there is the Nasmyth steam-hammer, which will thump one of those enormous cranks into a homogeneous mass, or gently break an egg-shell. For drilling, screwing, planing, shaping, slotting, punching, and shearing there are all sorts of machines, large and small, acting in all directions, horizontal, vertical, and angular. One is specially struck with the multiform applications of that remarkable tool—the planing machine. The introduction of this single piece of mechanism may be said to have revolutionised the whole of our manufacturing processes. How poorly the file would now compete with this all-pervading instrument. The former generation of workmen were taught (of necessity) to use it with much greater skill than the present, but the want is not felt, for the most herculean and carefully-executed hand labour is utterly incompetent to approach, in rapidity or precision, the effects of the planing-machine. In Messrs. Maudslay's workshops it is seen employed reducing and levelling the surfaces of large and small castings of every description, and producing beautiful work in all.

We will look in at Messrs. Penn's on another day.

A NEW INN IN LEEDS.

A TAVERN has been lately erected in Leeds which shows a certain departure from routine. On the opposite page is a view of it, and the plan of the ground-floor.

On the site stood, until pulled down in 1852, a house of two very low stories, probably more than 200 years old. It was let to a new tenant in that year on a building-lease of *thirty-one years* only, and the present substantial erection of brick with stone dressings is the result. The doorways, it will be seen, are recessed, in order to give room in a street of great traffic, and not very wide. Special reasons induced the tenant to separate the kitchen from the house.

Mr. W. Reid Corson was the architect.

ON THE DRAINAGE OF BUILDINGS AND STREETS IN THE METROPOLIS.

THE PIPE QUESTION

THE following paper was read at the ordinary general meeting of the Royal Institute of British Architects, March 20th, by Mr. W. A. Boulnois, Associate. We offer no opinion upon it:—

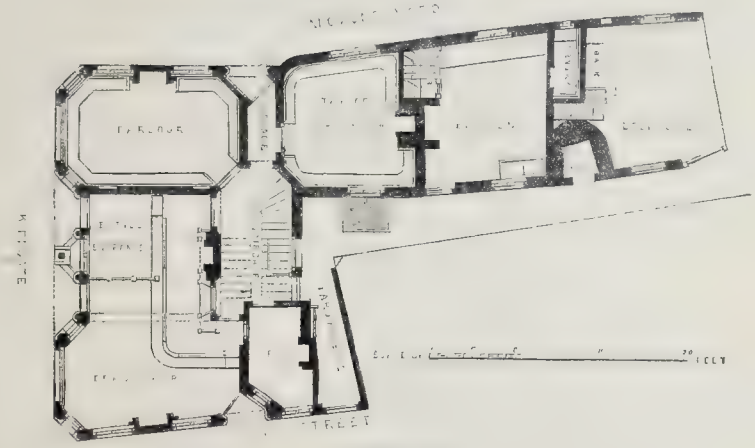
In venturing to offer a paper on this subject to the Institute I have not been influenced by a desire to communicate any special experience or information of my own, but simply by a wish to induce a discussion upon the controversy which, as we all know, has long existed, upon the methods and schemes of house drainage. The question lately received a great deal of attention at the Institution of Civil Engineers, and complaints have been loudly made by some of the disputants that their opinions did not receive sufficient notice in those digests or summaries of the proceedings in which the Institution is wont to condense the information derived from a debate. Here they will be able to express their opinions without reservation, none of our principal members being, as far as I am aware, pledged, as they contend the principal members of the other house were, to one side of the question; and they will be reported precisely in proportion to the clearness and accuracy of their remarks.

Every member of the Institute is, I am sure, anxious that the subject of drains should be well ventilated, however doubtful he may be as to the manner in which the drains themselves can best be so.

It would really appear strange to any man unacquainted with the deep-rooted prejudices, and the hot-headed partisanship of Englishmen, that a matter involving their most important interest, their health, their money, and their pride, should not ere this have been fixed upon such principles, that though there might remain a disappointed opposing few, the vast majority would have been entirely of one mind. When we consider the composition and character of the respective Boards of Metropolitan Commissioners of Sewers, since the public has been roused to the need of efficient servants in that capacity, the talent and ability of almost all their officers, we are fairly surprised that a controversy should be still raging as well on the things to be done as the manner of doing them. It is not too much to say, that the ablest men of the kingdom have occupied themselves generally with the sewer question. It has been the disagreement of professional men upon details, which has alone prevented their labour from bearing fruit. And now that we are nearer to a settlement of the question, we find that the finances necessary to carry out the measure have not been considered or provided for, as it was not worth while to prepare the way for expenditure whilst the manner in which the money should be spent was undetermined. Surely it should be the earnest wish of all right-minded men, without prejudice against new-fangled notions, as they are termed, on the one hand, or an absurd retention of theories unsupported by practice on the other, to arrive at such a conclusion on this subject as shall obviate the evils complained of. This is not to be done by avoiding controversy within such walls as these, or in papers and pamphlets, in which facts and opinions can be stated and refuted, but by abstaining from abuse of all parts of a given system of drainage because one's own nostrum is not in it; by abstaining from false and overstrained statements of wasteful expenditure, as it is termed, because our own nostrum is not experimented upon; and especially from a system of hand-grenade penny-a-line warfare, which has been the destruction of all the respect usually felt by the public for bodies of scientific men who are desirous to serve it with honour.

It is a custom with architects now, I think, much more honoured in the observance than in the breach, to begin all descriptions of practice with a reference to the ancient methods. I cannot do the justice to this part of the subject which it deserves, and which many here present could; but in confirmation of what was said the other night as to the antiquity of the claims which most modern inventors set up, I may refer to some portions of tubular drains brought from Ephesus and Miletus by my friend Mr. Falkener. I learn from him that there is ocular demonstration of the use of similar drains at Pompeii: in one case the hollow in which the pan was bedded in the wall clearly indicates its shape: it was on the first-floor; and, from the curious arrangement of the syphons, which are described as existing in the ornamental arches of the city, we may fairly conclude that the Pompeians had water-closets. As the drains were laid under the ornamental pavements through the principal portions of the house, and centred in the impluvium passing away in one channel through the prothyrum or passage, we may conclude that probably, from a greater fall, better workmanship, and the constant running of water which took place from the fountain in each house, they did not require to be so frequently laid open as ours do. No excavations have been made which show the size of the sewers in the streets at Pompeii; and it is greatly to be wished that some one competent would investigate this subject: permission would readily be granted for the purpose by the authorities at Naples to any one so well recommended, as an advocate of the pipe system would now probably be, by the Secretary of State for the Home Department.

At Pompeii there are indications that the same construction of the street water-courses under the pavement or trottoir, which exists now in the Corso, at Rome, was practised. The water-course is entirely under the pavement, which is of travertine, hollowed to form a series of long arches over it. There are some advantages connected with this method which might warrant its adoption in our streets: a much greater fall could be given to the water-course so as to obviate those elongated puddles which after heavy rains are not uncommon near the gully heads in our streets: the curbs would not be so much worn as they are at present from the custom of using them as trams by weighty carts, and the horses would be relieved from the strains—necessary to remove heavily laden vehicles from them. I have been informed that this is the most fruitful cause of jibbing in horses, and that in some parts of London it is a serious injury to the omnibus proprietors.



The pipe-drainage advocates having antiquity on their side as regards house-drains, it is satisfactory, on the score of an even debate, to find for the large sewer advocates the *cloaca maxima* at Rome. We are, however, indebted for more than would first appear of our present system to the Romans. Our system of sewers originated in the covering in of open water-courses, and at the Fleet-ditch and the Walbrook sewers, old Roman brickwork is intermingled with modern work, or was until quite recently. The present adaptation of the sewers has been the growth of a long and very costly rule-of-thumb system. All the men who have since Wren's time been consulted about sewers, and they are not few, were probably unable to apply, even if they were acquainted with, the principles of hydrodynamics. They were employed on piecemeal improvements; and it is fortunate for us that the earliest of them did their work so well as to set tolerable examples before the ignorant parish authorities and inefficient surveyors, who, until comparatively modern times, have managed the drainage of London. It is a subject of great congratulation, as it seems to me, that of the 1,000 miles of sewers constructed under the Commissioners, and the 50 miles of City sewers, there should be such a large proportion which is useful, when we consider its progressive development, the divided interests which have worked it out, and the uncertain and haphazard way in which the extensions to this great town have been made. It is quite certain, moreover, that we have derived all our present knowledge of the subject from the imperfections of the previous works, so that we have in that way largely benefited by the mistakes of our forefathers.

The division of the subject of the removal of refuse from the buildings and streets of the metropolis which is most simple, and admits of the readiest discussion, is into drainage, sewerage, and outfall. Drainage has to be considered under the head of *subsoil drainage*, *surface drainage*, and *house drainage*. The necessity of subsoil drainage in a locality entirely sublaid by an impermeable stratum, such as the London clay, needs no argument; and though it has been, and is ignored by many sanitary reformers, it is in fact almost as important as the house drainage. Damp soils and damp basements to houses are as constant and as deadly destroyers of human life as all the foul emanations of undrained refuse. The economy of effecting this subsoil drainage by the same sewer which is to convey the house drainage admits of no question, as it seems to me; and it is very efficiently provided for by the construction now adopted in the sewers of the Metropolitan Commission, which are built in cement to the height of the internal flow, and in mortar over this, which admits of the percolation of the water in the soil above and around them. The City has long been pre-eminent in respect of its subsoil drainage over almost all towns in the world.

One of the places most insisted upon as an experimental proof of the efficacy of the pipe-drainage is Tottenham. Now there is a portion of Tottenham, lately called Marsh-lane, but now Northumberland-park, where the system of the Board of Health has been most efficiently carried out by Mr. Pilbrow: the houses are well drained, but the subsoil drainage not being provided for, the basements after heavy rains, stand in water: the year before last the water rose in

NEW TAVERN IN LEEDS.—MR. W. R. CORSON, ARCHITECT.

GROUND PLAN.

the basements of some, which I had occasion to visit, 18 inches, and had so saturated the walls as to injure them permanently. Had the drainage been according to the system of the Metropolitan Commissioners of Sewers, this most serious evil would have been avoided, and the house drainage equally good. I am aware that a sufficient fall could only have been obtained at a great distance, and that the present system is the only one the place could yet pay for; but it affords a strong proof of the great gain which, when there is opportunity, arises from the combining the subsoil and house drainage.

The surface drainage, by which is meant the removal of the rain-water, is that branch of the subject which opens up the question of small or large sewers. The rain-water which falls on a given area, would seem to be specially intended for the cleansing of the refuse which may be on the surface, and very good reasons should be given why this is objectionable as applied through the sewers before we depart from so natural and obvious a use of them. The chief reason given by those who seek to separate surface and house drainage is an economical one: the cost of the sewers, they say, may be reduced to such an extent that you can have two systems, one for house and the other for surface drains, at a less expenditure than you can construct your sewer large enough for both. Now, granting for the moment that the systems of small sewers will do for *house drainage*—as, perhaps, it will in some special and favourable cases,—it is unquestionable that sewers large enough for the passage of a man to clean them would be required for the rain-water or surface drainage in this metropolis: the detritus from Macadamized roads forms a concrete much more difficult to remove than all obstructions in sullage, and no gulleys are able to prevent this deposit from accumulating in our sewers.

We in this metropolis, with our levels, if we desire to be able to cross our streets without boats, and occupy the basements of our houses for more than two hundred and fifty out of the three hundred and sixty-five days in the year, must have sewers on the lowest line of the lowest and size requisite to carry off a given rainfall, but of size sufficient to admit of these sewers being approached for cleaning.

The economical reasoning therefore fails.

The theory so carefully elaborated, in some of the treatises on drainage, of forming surface drains literally at the surface, and only covered by the thickness of stone or other material to protect them from the passage of traffic, and a habit of their being easily cleansed of the road-dirt, forgets that the front areas and rear portions of London houses, the gardens, and the basement areas, are usually 12 or 14 feet below the street level, and totally neglects them.

Having then the necessity for large sewers for the *surface drainage*, and of deep sewers for the *subsoil drainage*, we are next to inquire into their approximate to *house drainage*, or the substitution of other methods. Great improvements have within the last half century taken place in the *house drainage* of the metropolis, independent of the question of the size of the drains. Cesspools are, I believe, no longer contended for. Water-closets are considered essentials by a class of people, whose fathers would have as soon expected to ride in their own coaches as use them; and that periodical and dreadful infliction upon Mr. Paterfamilias of "something wrong with the drains" is, with the increased knowledge, less frequent than formerly. This last evil is doubtless attributable to the general use of the trap, pottery drain, not that all the improvements have been made with it, but because the builders and architects who would not use it were compelled in support of their prejudice in favour of the old barrel drain, and for the honour of the craft, to build their brick drains somewhat more smoothly than they had been in the habit of doing. The main cause of improvement, however, is the information which we have to proceed [illegible] the necessity of an uniform inclination in place of the flat incline and sudden fall near the sewer, which [illegible] and the [illegible] housemaids and footmen, that a good scour of water [illegible] by a plug under the lifted water-closet handle during the coming in of the water supply [illegible] pouring pailful by pailful down the grating in the [illegible].

Greatly indebted we are to the sanitary reformers on this subject, and we may offer ourselves the same congratulations upon their [illegible] on the practices of our [illegible] we know now what to avoid. Their 2-inch pipes from sinks, 3-inch house drains, and 4-inch combined drains, are now as much things of the past amongst practical men as a cesspool under the centre of the front kitchens: [illegible] closets, are the smallest which practice has warranted us in adopting. Theory proves, and practice [illegible] orily, that a 3-inch pipe with the inclination ordinarily obtainable in London, would be enough to carry off the refuse from a first-class house, but practice has discovered such frequent stoppages even of 4-inch pipes, that they are now scarcely ever used.

I could give the history of numerous and various individual failures which have arisen, but others will occur to all the members. We are sometimes told that these are *preventible stoppages*, and that the small drain gives increased cleansing power to the water in the contents, and is so much better as to warrant [illegible] of the means to prevent the insertion of improper substances at greater cost than we are now accustomed to do; in other words, that the trap should be [illegible] and altered. How often would even the 3-inch drain be quite full of water so as to [illegible] before it? This great and inherent evil of *stoppages* is sometimes met by saying that you must teach the people not to put matters down the drain which will cause stoppage, and that a population must be thoroughly imbued with the belief that the omission and commission of sins against the drains will cause a recoil upon themselves in disease and death; but we must change the character of the human mind before this desirable period will arrive: do not men commit sins of omission and commission upon the ducts and sewers in their own bodies, knowing that they will recoil in the shape of disease and death?

The most fruitful causes of the failure of pipes have been the joints: butt joints are specially liable to this observation: when laid in ground which is not very solid and consistent, the lengths are liable to shift, and an irregularity causes a lodgment of a small portion of the matters floating down: once begun, the evil speedily accumulates, the obstruction gathers from each passing substance which is not of sufficient tenacity to resist it, and eventually entirely chokes the pipe.

With reference to whole socket-pipes, practical men are divided in their opinion as to whether they are best set in clay or cement: for my own part, I think it essential to pipe-drainage that no extraneous matter should possibly get into the pipe from the outside, and I think they are best set in cement. All house drains are best watertight: a stoppage may, if this is not the case, exist for a long time in a drain without detection, as the fluid sewage oozes through the joints and saturates the surrounding ground. In a gravelly or sandy soil this evil may have been proceeding for months without notice. Half-socket pipes, I think, are the best, as they offer the opportunity of removal without breaking them upon the occurrence of stoppages, and it is more easy to determine when they are accurately laid, the upper semicircles of the two pipes abutting against one another affording a good test of this. The thicknesses of the pipes have, with very sound judgment, as it seems to me, been increased by the resolution of the Metropolitan Commissioners of Sewers; they must now be ½-inch for 4-inch, ⅝ for 6 inch, 1-inch for 9-inch, and 1¼-inch for 12-inch. Beyond this size the Commissioners do not permit pipe drains within their jurisdiction, as they have been found to break and cause great damage and expense.

The glazing of the tubes inside, though very desirable for [illegible] utility in causing a better pipe to be burnt than would otherwise be is not of any material assistance to the flow of the sewage matter through them. There forms in all sewers a sort of slime against the sides and bottom, which is, after a very short period, as efficacious in giving a smoothness of bore as the most expensive glaze would be. Too much attention cannot be paid to the bedding of the tubes at a true inclination, a very small error in the levels being of much more importance than in a large drain, where there is opportunity for adjustment of an even inclination in the current: it is obvious that 3 inches wrong with a 6-inch tube on a very flat incline, will be equivalent to the stopping up of half the tube.

With reference to the question of using *back combined drainage*, or *a separate drain* from each house to the sewer in the street, there are many considerations which are not usually taken into account by those who advocate the first of these systems. We have seen that street sewers are necessary on account of the necessity for *surface drains*, and that they must be so large for this special purpose as to admit of their being applied also to receive the *house drainage* (I do not apprehend that the most earnest advocate of back drainage ever proposed that the surface drainage of the street should be at the rear of the houses). We have then to consider whether it is better that the block of houses should be drained at the rear in the back courts or gardens by a combined drain which is turned into this sewer at one point, or that each house in the block should have its separate opening into this sewer. I pass by the considerations of invasion of private property involved in the combined back system, and the more serious danger of intentional stoppage and cutting off the drains, of which, perhaps, nearly all of us here have seen instances, as they are by no means uncommon. I pass by the necessity which in almost all cases there would be, that the combined drainage of the whole block should flow under the end return house, and the much greater liability there would be that a stoppage should occur in a small drain, say of 12 inches diameter, than in the sewer in the front, and that all the inmates of houses in the block would be the sufferers for the neglect of one. I pass by these considerations, though they are enough to prevent the adoption of back drainage without strong local reasons in its favour, and I come to the main point at issue between the advocates of one system and the other, viz the economy. Now, first we must have a drain from the front area in all streets, so that we have the length of the drain from the front area to the water-closets and sink in the basements and the back area, if there is one, to set against the length of the drain from the water-closet and sink to the back combined drain, and the frontage of this combined drain along the house. Almost invariably with modern houses in blocks, there are rear projections, which are quite as wide as the front area: generally they are wider: we have therefore to set the extra length of the pipe in the house (on the supposition that the sink and water-closets are at the rear as they usually are) against the frontage, and we have in this to set 12 in. pipe frontage, and one 12 in. T piece, diminishing to 6 in. against a straight 6 in. pipe through the house. It is clear that in nineteen cases out of twenty, back combined drainage would be more expensive than separate front drainage, provided they were both equally well done. It suits well perhaps with the views of speculative builders in outlying parts of the town, where there are no basements to the houses, and surface drainage is not yet provided for; the parishes not having had the roads and pathways handed over to them; to obtain permission to insert all along the rear of their blocks before their garden or back court fence walls are up, a cheap 15 in. drain instead of an efficient sewer in the street; but it is of immense importance that their views should not be complied with to the prejudice of the health of the inhabitants of their houses, and the property of the persons who purchase their interest in the houses where they have let them.

Were each man who builds in this country his own freeholder, there would be no question as to the combined back drainage: it would not be tolerated; and because we have a vicious system of leaseholds which enables such propositions to be entertained and to be hailed by some of the small builders, are we to be told that the Commissioners of Metropolitan Sewers, who have wisely permitted the system only under such local circumstances as make it obviously desirable, are neglecting the objects of their appointment and stifling the truth?

We now come to the second division of the subject—Sewerage, by which is meant the arterial drainage from the house-drains to the out-fall.

We have arrived, in considering subsoil and surface drainage, at the fact, that a sewer larger than the theoretical size is necessary, and after making due allowance on that account, we can with tolerable accuracy determine what should be the sizes of the sewers. As they gradually approach their outfalls they receive increased amounts of drainage from the increased area they traverse: the average of the make of sewage over a given area of inhabited houses in London has been tolerably accurately obtained by experiment.

It is found that in six hours in each day, as much sewage comes down as during the remaining eighteen hours: the rainfall is taken by the engineers to the Metropolitan and City Commissioners at 2½ in. over the entire area, after making proper deductions for the effect of evaporation and absorption in dry ground, and upon the formula of the square root of the hydraulic mean depth, multiplied by twice the fall in feet per mile, minus one-tenth for friction, equalling the velocity in feet per second, the capacity of the sewer can be calculated. It is a fact seldom admitted by pipe sewer advocates, but nevertheless true, that many of the old London sewers are too small, as well as many too large, upon this principle.

It is sometimes forgotten in the controversy on the part of the pipe advocates, that upon true hydraulic principles, the sizes of the sewers, as calculated for their drainage capability only, soon reach such dimensions as that pipes are no longer available, even if they answered their ends. Besides, were they laid with reference only to the immediate requirement in places where they would be sufficiently large for it, they do not admit of extension to embrace the drainage of an increased number of houses, a point very necessary to be considered on all grounds.

Pipe sewerage may be said to have been well tried in the metropolis, and to have failed. On the wall are instances, by no means the worst, of the condition of pipe sewers, as ascertained by Mr. Bazalgette, the engineer to the Metropolitan Commissioners, by their order. Many of these, it appears, were habitually flushed, and the investigations were made by the officer to the Commission, solely with a view to ascertain the applicability of pipe sewers in the future operations of the Commission. The present shape adopted by the Commission answers, as far as its bottom goes, all the ends of a circular sewer in diminished friction; and as the perimeter widens, it must (by the well-known principle of hydraulics that the resistance of every particle of the fluid is in direct ratio to the perimeter of the section, and inversely as the area of its section) give beyond the semicircle a greater velocity in feet per second.

The sewers now built under both Commissions are constructed upon sound hydraulic principles, and we may hope that there is no waste of public money for want of an ample scientific knowledge, both of the requirements, and the best method of answering them.

There are details connected with the sewerage which it is worth while to allude to, as many differences of opinion exist upon them: the ventilation of the sewers is one of these. It is admitted on all hands, I believe, that till we have a perfect water supply, and our sewers are scoured as those of Paris now are, by strong streams of water, provision must be made for the occasional passage of labourers in them to cleanse them. And even when this much to be longed-for time arrives, entrance will be necessary for the repairs, which will be rendered more frequently requisite by the scouring. If the sewers are to have labourers in them they must be ventilated, and it is a question which is the best method of effecting this: many schemes have been proposed.

A direct air shaft leading to the centre of the street is adopted by the Metropolitan and City Commissioners, though they admit that it is open to great objection. A plan which has been used with success in many places, is to connect the rain-water stack-pipes with the sewer. Mr. Varley, the water-colour painter, read a paper at this Institute, in 1846, descriptive of this method. Shafts and furnaces for draft have been proposed, but would entail enormous cost. It has been proposed to compel all persons having steam boilers for manufacturing purposes, as brewers, mechanical engineers, and the like, to admit the foul air from sewers to their chimney shafts, but it is doubtful whether this would answer. The chimney shafts would hardly always be in the highest levels, and very long adits would have in most cases to be run to the nearest sewer. Dr. Buckland came down here one day to propose that the gas-lamps, in certain requisite numbers, should be connected with the sewers by shafts, and that iron cylinders should convey the foul air outside the stalk of the lamp to the flame, which would consume it, or destroy its noxious qualities.

Some have proposed that every house to be built or rebuilt should be compelled to have a flue in the party wall for the use of the Commissioners of Sewers, should they need it, to ventilate the sewer at that part: this does not seem an impracticable plan, and perhaps it will be considered in the New Buildings Act, which, we have been informed, is now in the hands of the Board of Health. At any rate, ventilation in the sewers must be provided.

Flushing is a point to be noticed in the consideration of sewers. Great improvement has been made in this method of cleansing the sewers, and, with a perfect water supply, there is no reason why it should not be extended to such a degree, as to almost entirely obviate other methods, except in flat situations, where raking will probably always be requisite

A system of flushing has been proposed by Mr. Jennings (whose clever contrivances in connection with drainage details, entitle him to the thanks of all architects and sanitary reformers), in which the accumulated refuse of each day is released at a given moment from a receptacle constructed under each house—any number, say 100—such receptacles being opened at once by the aid of wires and cranks, or electricity, it is supposed a rush would take place down the sewers which would clear everything away with it. Another invention by Mr. Salter, to which my attention has been brought by Mr. Jennings, is the self-acting flushing gate, in which by an outflow pipe from the upper level, communicating with a tilted box on the lower level, or in the side entrance, the sewer itself, when full, forces up a catch lever and releases the gate. It is very ingenious, and is recommended from experience by the authorities at Leeds.

Time will not permit me to treat of the many other matters connected with the sewers, which will, I hope, come out in discussion, but we must pass to the outfall, on which I can say but very little, except that having read digests of all the schemes submitted in competition to the Commissioners of Sewers, I do not believe there is one except that of Mr. McLean, for intercepting the higher levels, and taking the lower under the Thames at Vauxhall, which is practicable, without such an enormous outlay of money as to quite preclude it from consideration. The engineer who devoted so much time to the question, and whose health failed him in the attempt to conduct the multiplicity of detail connected with his office simultaneously with the designing of a great scheme, died before he could mature it, and it remained for Messrs. Bazalgette and Haywood to work out plans for the main drainage of the metropolis. It may be shortly said of this scheme, that the new sewers proposed intercept the present at various levels, and form of themselves the sewers of the districts through which they pass. The schemes have met the approval of Sir William Cubitt and Mr. Robert Stephenson, both eminently practical men, and it is satisfactory to find that Lord Palmerston does not include them in his condemnation of the Metropolitan Commissioners' plans.

Were Lord Palmerston for one week at the Sewers' Office, or even had he to make application there so frequently as we all have, he would have long considered before he took such a violent course as to declare the whole of the proceedings of the Metropolitan Commissioners, since they have been in office, erroneous.

* * * * * * *

I have been this evening informed, on undoubted authority, that an epidemic caused by malaria or the leakage of the drains, has again broken out at Croydon: these warnings require the earnest attention of us all, and they are additional reasons why, when no such complaints as are made about the Croydon drainage can be made of the present well-tried system of the Metropolitan Commission, such a sanitary *coup d'état*, as it has been described to be, as the abolition of the present commission, upon a presumption that a new and untried system is the best, is particularly to be reprehended.

Some other gentlemen followed on the same side, to be mentioned hereafter, and the discussion was ultimately adjourned till the 3rd inst.

THE PANOPTICON.—We are requested by Mr. Lewis to state that he was associated as architect to the Panopticon with Mr. Finden; although from the latter gentlemen having attended to a different department of the business, the labour of the Panopticon was undertaken by himself.——The number of visitors has reached 1,000 a day.

MODEL LODGING HOUSES IN NEWCASTLE.—The company recently formed for the purpose of erecting model lodging-houses, have approved of the plans submitted to them by Messrs. Johnston and Knowles, architects, of this town; and as the council last week leased a piece of ground to the company at Garth-heads, the erection of these buildings will commence forthwith.

PROGRESS OF THE MANUFACTURE OF TUBULAR DRAIN PIPES.

IT is estimated that in the year 1848 there were manufactured of tubular pipes about 104 miles; in 1849, 446 miles; in 1850, 1,040 miles; in 1851, 1,820 miles; in 1852, 2,080 miles; in 1853, 2,600 miles; in all, as near as can be ascertained, about 8,000 miles. It is estimated that nearly one-third of the whole quantity was of the larger sizes required for sewers. On an average, two miles of sewers in provincial towns serve for the sewage of the habitations of about 1,000 of the population.

It is estimated that in the metropolis about 15,000 houses have been drained with 4-inch tubular drains, and about half as many with 6-inch drains, while upwards of 250 miles of pipe sewers have been laid down in streets.

THE NEW METROPOLITAN CATTLE MARKET.

ON Friday in last week the first stone was laid of the clock-tower and banking houses, which will be the central object in the new Cattle Market, Copenhagen-fields. The banking houses are ranged around the base of the clock-tower, and will form a figure of twelve sides. Mr. H. L. Taylor, the chairman of the committee, officiated, assisted by Mr. Bunning, the architect, and Mr. Wilson, the builder. An electrotyped plate, bearing the names of the committee, and a pretty vase of Parian, containing the current coins of the realm, were placed on a solid base, and the "first stone," hollowed out to cover them, was then let down over them. The trowel was appropriately inscribed, and had on it a view of the clock-tower with the banking houses around it. The works here are of great extent, and are being proceeded with vigorously. The plot contains 75 acres. "In form it is exceedingly irregular, and on the northern side it runs out to a triangular point. The ground is bounded on the east by the Caledonian-road, along which it extends over the Great Northern Railway to the Camden-road, which it abruptly leaves, striking directly westward about 600 feet, and then northward about the same distance to the point referred to. The boundary-wall then runs along in a south-westerly direction towards Maiden-lane, leaving the Barnsbury-road to the right about 160 yards. From this point Maiden-lane is the boundary on the western side of the plot, the south side forming a curve inwards, now forming a spacious sweep as an approach to the main entrance gates on that side. The road along this portion is already made. It is about 2,100 feet in length, 30 feet wide in the carriage-way, and 10 feet wide on each side for a foot-way, making the whole width 50 feet. This road and pavement are completed."

Abattoirs, lairs, covered pig and calf market, public-houses, &c. form part of the design, which the committee hope, Mr Taylor said, to make, as a cattle market, a "pattern for the whole world."

Houses are springing up in all directions around the site.

CITY OF LONDON FREEMEN'S ORPHAN SCHOOL, BRIXTON.

ON the 28th of March this building, a work of the Corporation of London, was opened by the Lord Mayor and the chairman of the committee, Mr. Deputy Hale, to whom belongs the rare merit of having brought about the establishment of two important educational institutions, namely, this and the "City of London School." The first step was taken by Mr. Hale so long ago as 1846; and in 1850 an act of Parliament was obtained, with some opposition, for the erection, maintenance, and endowment of a school at Brixton. The first stone was laid on the 27th April, 1852, by the Lord Mayor (Mr. Alderman Hunter), assisted by the chairman of the committee. It is situated in Shepherd's Lane, Brixton, adjoining the London Almshouses, and was designed by, and erected under the supervision of Mr. J. B. Bunning, the city architect. The contractors for the building were Messrs. Piper and Son, who, we may say in parenthesis, have done their work well.

In order that the edifice might be every way

suited to the purpose, and be worthy of the body to whom it belongs, the Corporation have authorised a much larger outlay upon it than was originally proposed, about 20,000*l.* we believe. It is intended for the present accommodation of one hundred children (viz. seventy boys and thirty girls), but could readily be adapted for the reception of a larger number, if means should be hereafter available for their education and support.

As we propose giving a plan and view of the building, we will only say that the entrance hall is large and spacious, so as to admit of a library in the gallery, as well as to provide spaces for paintings, which from time to time may be presented. There are excellent committee-rooms, girls' school, and work-rooms, boys' school, rooms for the officials, bath-rooms, and large play-grounds both for boys and girls. The building contains provision for ventilation, and every desirable convenience. On the staircase leading to the girls' wing of the building is a charming statue of "Helen Walker," the original of Scott's "Jeanie Deans," by W. Calder Marshall, R.A.; and on a similar landing-place in the boys' staircase there is a statue of Whittington, by the same sculptor.

Each end of the dining-hall is filled in with a large semicircular-headed glazed partition, so that the staircases are seen from the room. The dining-hall itself is a very handsome and lofty apartment, with a skylight at the apex of the roof glazed with rough plate, which does not leave a dark corner for a mouse; indeed, as the Lord Mayor happily observed, the building throughout possesses the peculiarity of lightness; and he hoped this abundance of light which it afforded would be typical of the instruction which would be communicated within the walls, and which, he hoped, would tend to the removal of ignorance, as the introduction of physical light caused the dispersion of darkness. The sides of the hall are adorned by subjects in *alto relievo*, after Hogarth, by Mr. John Henning and his son, illustrating the idle and industrious apprentices. Four of these are finished, with the quotations, in shields, appended by Hogarth. The fifth, the installation dinner of the good apprentice as sheriff, is shown by a cartoon only: if not advanced, we should be half disposed to advise the adoption of another subject.

We have before now offered our commendation to Mr. Bunning for his endeavours to make artistic decoration general, and to induce the employment of sculpture in our buildings; and we hope his excellent example will be followed. On another occasion, in the same position, the architect would probably adopt *basso relievo:* high relief in such a position, immediately over the heads of sitters, has inconveniences. We have no hesitation in saying that this dining-hall is a fine apartment, and that it will increase Mr. Bunning's reputation out of doors.

THE FALL OF TWO HOUSES AT HORNSEY.

We have received a number of angry letters on the unfortunate accident at the junction of the Allen and Cooper roads, Albert New Town, Hornsey, which led to the death of Richard Hall, a bricklayer in the employ of Mr. Edwards, the builder of the houses. They complain, amongst other things, of want of information; and this we will endeavour to supply, so far as the evidence at the inquest, which was held last week before Mr. Brent, the deputy-coroner for Middlesex, will enable us.

The houses in question (fourth-rate, with four stories) formed part of a block of five, which were intended for shops (the remaining three are ready for slating); and when inspected by the jury presented a mere heap of brick and mortar *débris*. Confining ourselves to those points in the evidence that relate to the structure,—

Joseph Dewsbury stated, in answer to the coroner, that the deceased and he worked together in the employ of Mr. Edwards at the houses which had fallen down. Witness was helping the carpenters, and the houses were so nearly finished, that there was not more than another half-day's work upon them so far as the building was concerned. On Saturday, the 18th inst. about a quarter to three o'clock, he was on the ground when he heard a loud crash, and on looking round he saw the place down. He had been on the scaffold about five minutes before, and everything seemed sound then, and the brickwork quite straight, without the least sign of "swaying."

John Jeffreys said that he was a labourer, and was working on the scaffolding in front of the house when it fell down. He could not tell how it happened, but he thought the end gave way first, and all the rest went with it.

Wm. Wilkins, a bricklayer, thought that the fall in of the walls was occasioned by the work being run up too quickly, and before it had time to set, and which with shop-fronted houses was more dangerous than with private houses. On account of the work being soft and green, and the continual swaying of the ladder, with the men taking stuff up and down, the front wall went in and took the rest with it. The deceased was raising the quoin at the time of the occurrence, and witness was working on the scaffold, when all in a minute he heard a crash, and had just time to seize hold of a pole of the scaffold, when all went down together.

In answer to the coroner, he said that he did not consider any one to blame, nor could he recommend anything for the future. He considered that five labourers going in a hurry up and down the ladder carrying heavy stuff, with the ladder resting against the front wall, was quite sufficient to cause the accident by the "swaying" to and fro.

Mr. Rawlinson Parkinson said that he was the District Surveyor under the Metropolitan Buildings Act, and had frequently seen the houses in question. He saw them at eleven o'clock, and at two o'clock on the day that they fell. He considered them as fairly built as most other houses in the neighbourhood. When he saw them they appeared sound enough. He thought that they were carried up very quickly, and further, he noticed the ladder swaying against the front wall, and he thought it was not right.

Coroner.—Did you make no remark about it?—No, he did not, because it was a very common occurrence, and he did not think that any remark which he might have made would have been attended to. Did not blame any person, for it appeared as if the accident occurred from the swaying of the front wall.

Coroner.—Have you no power to prevent these things?—Witness had not, so long as the parties complied with the Act. The work ought to be allowed to dry. The bricks appeared to be good enough. Some of them were sound "place" bricks, which were sufficient for an inside party-wall, where there was no exposure to the weather.

Coroner.—I consider that common justice to the men engaged in building operations requires that the district surveyor should be empowered by the Buildings Act to interfere in cases like the present. Am I to understand, Mr Parkinson, that with your recommendation to let the work dry you acquit the builder of any culpability?—I certainly do.

W. H. Barnes, of Islington, stated that on the morning of the accident he passed the houses, and considered them as safe-built houses as any in the neighbourhood. He could only account for the accident by the fact of the houses having been run up rather quickly, and the swaying of four or five men up and down the ladder, the top of which resting against the front wall, worked it loose until it fell in, taking the rest with it. Witness did not see any blame anywhere, as both mortar and bricks appeared of the best quality, and were well put together.

In answer to the coroner, Mr. Barnes replied, that Mr. Edwards was a friend of his, and that he himself was also engaged in the building trade.

A gentleman present suggested to the Coroner the propriety of having a disinterested surveyor from town to examine the fallen buildings,—as a proceeding which would be satisfactory to every one.

The Coroner said that nothing would give him greater pleasure, if he could afford it, as he must pay the gentleman out of his own pocket. Upon a similar occasion, some time ago, an independent surveyor had been summoned by him to give evidence, and when the account went before the Middlesex County Magistrates they disallowed it, and he was obliged to be at the loss of the professional gentleman's fee himself. In the present case there was no evidence alleging blame against any one, and he must, therefore, call upon the jury to decide upon it as it stood before them, reminding them at the same time that whatever verdict they returned, it would be no bar to an action for damages by the friends of the deceased in a civil court. He must now leave the case for their consideration, as he understood many of them were practical men, and, therefore, could form a better opinion about such matters than he could for them. It was to be regretted that men working at such dangerous occupations were not more careful of their lives.

After about twenty minutes' consultation, the jury returned a verdict of "Accidental death," with an addendum that greater care should be taken in future.

We saw the premises a short time after the accident, and are bound to say that the materials which had been used seemed better than those in some other instances around. The work, however, if we may judge from parts of the houses remaining, had been carried up in a great hurry; and if the outer wall was a party-wall, like that which stands at the other extremity of the block of houses, the accident is not at all surprising. The latter ought itself to be immediately shored up. The Buildings Act permits a 9-in. party-wall above the basement for fourth rates, and here (as in hundreds of other cases) we have a wall of this thickness, say 30 or 40 feet in height, without any bond in it, or anything against it, to keep it upright. The *accident* is, that a wall hastily carried up under such circumstances should *stand*.

ST. MARK'S, ROSHERVILLE.

A new church, dedicated to St. Mark, has been recently erected at Rosherville, near Northfleet, Kent, from the designs of Messrs. H. and E. Rose, architects. It is Early English in style, and stands on a terrace, the sloping face of which is turfed. We have engraved a view of it from a calotype. It was built at the sole cost of the family of the Roshers (six brothers and a sister), who are the freeholders of the property in the neighbourhood. It consists, as may be seen, of nave, north and south aisles, chancel, and vestry, with tower and spire, and has 500 sittings (150 of which are free). There is a parsonage-house erected on the ground, adjoining the church, in the same style. This has been done at the cost of Mr. George Rosher, who, in consideration of the gift has the patronage of the church. The church is built of Kentish Rag stone, with Caen stone quoins, &c. The walls, internally, are rendered with blue lias, not jointed; the corbels, carvings, pulpit, and font, are of Caen stone. The roof is of fir, stained, and the pewing is partly the same and partly real oak. The reading-desk is oak. The altar paving is of Minton's encaustic tiles, and in the east window is stained glass by Wailes. Messrs. R. and E. Curtis, of Stratford, were the builders. The finishings were by Wood, of Gravesend. The carvings were executed by Hart, Swales, Seale, and others, in Boulton's employ, and a portion by Purdy. The building is warmed with gas stoves, by Stevens and Son, and has an organ by Walker. The cost of the buildings, including fittings, has been about 7,000*l.* we are told.

THE MOUSTACHE MOVEMENT.

The movement in favour of wearing the beard and moustache, to which, on sanitary grounds, we gave the first real impulse in this country, will be very materially aided by a lecture on the subject which was delivered by Mr. Thomas Shave Gowing, at the Ipswich Mechanics' Institute, last week. Mr. Gowing has bestowed a large amount of time and research on the subject, and has brought much learning and ingenuity to bear upon it. The structure, intention, and uses of the beard were examined, and its artistic relations indicated: its history was next traced, and a reply given to some objections against wearing the beard not embraced in the preceding matter.

In closing his view of the uses of the beard, the lecturer said,—

"I have reserved to the last the curious fact, which in itself is perfectly conclusive as to the protecting office of the beard, and explains why its hair has additional provision for its nourishment,—and this fact is, that while the hair of the head usually falls off with the approach of age, that of the beard, on the contrary, continues to *grow and thicken* to the latest period of life. He must be indeed insensible to all evidence of design who does not acknowledge in this a wise and beneficent provision, especially when he connects it with the other well-known fact that the skull becomes denser and the brain less sensitive, while the parts shielded by the beard are more susceptible than ever, and have less vitality to contend with prejudicial influences."

Numerous drawings illustrated the artistic view of the question. In his historical survey he said, speaking of the Jews,—

ST. MARK'S, ROSHERVILLE, KENT.—MESSRS. H. AND E. T. A. ARCHITECTS.

"It is now generally believed that most of the usages established by Moses had more or less reference to Egyptian customs, from which he was desirous of weaning them. As might be expected from the inspired lawgiver, whose inspired Books start with the grand assertion, that man was made 'in the express image of God,' any attempt to alter the natural features of the 'human face divine' was denounced and emphatically interdicted. Twice is the commandment issued, first to the whole people, 'thou shalt not mar the corners of thy beard,' in other words, thou shalt not alter the form thereof which I thy God have appointed! Then to the priests, with the addition, that they should not make baldness upon their heads. It is of the utmost consequence to recall the superstitious practice of the Egyptian priests, and to remember that Moses issued this command to the Aaronites, fresh from Egypt, because it most convincingly shows that the practice of shaving, even when resorted to with the view of pleasing the Deity by an extreme degree of external purity in approaching his mysterious presence, was directly and most absolutely forbidden.

In our own country "William is said to have attempted to compel the sturdy Saxons to shave, but many of them left the kingdom rather than part with their beards. In this, as in other matters, Anglo-Saxon firmness ultimately conquered the conquerors, and the Norman sovereigns gave in to the national custom. As early as Henry I. that is, only forty-four years from William's landing, we learn that Bishop Serlo met that monarch on his arrival in Normandy, and made a long harangue on the enormities of the times, especially long hair and bushy beards, which, he said, they would not clip lest the stumps should wound the ladies' faces. Henry, with repentant obedience, submitted his hairy honours to the bishop, who, with pious zeal, trimmed king and nobles with his own hand. The stout King Stephen wore his beard, and a Saxon chronicler complains that, in the civil wars of his time, in order to extort the wealth of peaceable people, they were 'hung up by their beards'—a proof the latter were long and strong. Stephen's contemporary, Frederick I. of Germany, to prevent quarrelling, laid a heavy fine on any one who pulled another's beard. Henry's queen, Eleanor, had been previously the wife of Louis VII. of France, who, having been persuaded to shave off his beard by his priests, so disgusted Eleanor that she obtained a divorce. Richard the Lion-hearted was bearded like a lion, and though he was so absorbed in the crusades that he did not redress, yet he acknowledged the justice of, the complaints of the celebrated Long-beard, 'Earl of London and King of the Poor,' who did honour to his beard by resisting oppression, and perished after an heroic struggle, the victim of cowardice and treachery. Bishops wore the beard, and abbots and monks shaved in this reign. John had what was called a 'Judas beard,' of which his actions were every way worthy. Fortunately, the bold barons oat-bearded him, and Magna Charta was the result. His son, Henry III. had a moderate beard, and the longest reign till

George III. Edward I. showed the Scots what a long beard could do, with long shanks and a long head to back it. This king has been called the English Justinian, both he and the Roman emperor being noted for improving the laws and cherishing their beards. Edward II.'s beard, like his character, was more ornamental than strong, and his reign is chiefly memorable for the composition of that favourite old song, quoted by Shakspere—

"'Tis merry in hall, when beards wag all!"

Edward the Third's bold beard spread terror in Scotland and France, and his son the Black Prince, young as he died, was an apt type of his "prowess in the tented field." Richard the Second, with all his faults, was neither deficient in beard nor in courage—the latter shown in his meeting with Wat Tyler, and his defence against his assassins. Henry the Fourth, "the crafty Bolingbroke," had a chin cover in every curl of which lurked an intrigue, of which his son Henry the Fifth, who was made of other metal, was so ashamed, we presume, that he wore in penitence a shaven chin throughout his ten years' reign, as may be seen by his monument in Westminster Abbey, the remains of which still exist. Shaving continued partially in fashion in Henry the Sixth's reign, who himself in later life was bearded like a philosopher, accustomed to moralize over the ups and downs of life, of which he had no common share. Edward the Fourth shaved out of foppery; as did that smooth-faced rascal Richard the Third, who "could smile and smile and be a villian." Henry the Seventh shaved himself and fleeced his people. * * * *

"Under Charles the Second, the beard dwindled into the mere moustache, and then vanished. And when we consider the French apery of the an English court, it is no wonder that the beard appeared too bold and manly an ensign to be tolerated. It went out first among the upper classes in London, and by slow degrees the sturdy country squires and yeomen also yielded their free honours to the slavish effeminate fashion, which, by the force of example, descended even to the working classes, on whom it imposed new burdens and some bodily diseases, from which their hardy frames had been hitherto exempt. It is to be hoped that when any one for the future talks about the beard being a *foreign* fashion, he will be reminded that it is a good old English natural fashion—and that the present custom of shaving was borrowed from France, at a time when we had no credit to borrow anything else, seeing that king, courtiers, and patriots, were all the pensioned dependents of the French monarch! The sooner, therefore, we cease to shave, the sooner shall we wipe out the remembrance of a disgraceful period of our history!"

Having answered *seriatim* the objections to the beard which have been raised, the lecturer concluded by saying,—"Having now offered proofs that the beard is a natural feature of the male face, and designed by Providence for distinction, protection, and ornament, and shown you historically that while there was never any sufficient reason alleged for leaving it off, unless a heaven-condemned superstition, or the capricious dictates of fops and profligates, afford to any sound mind reasonable motives of action, need I ask you not to oppose the efforts of those who, reverencing the Creator's laws as above the dictates of man, conceive themselves justified in returning to the more natural course. On our part, we will, notwithstanding all that we have said, freely allow any one to continue the practice of shaving who will be content with the same plea as a certain Duke de Brissac, who was often overheard uttering the following soliloquy, while adjusting his razor to the proper angle, 'Timoleon de Cosse, God has made thee a gentleman, and the king hath made thee a duke; it is right and fit, however, that thou shouldst have something to do; therefore thou shalt shave thyself.'"

Those who christened Mr. Gowing "Shave," little thought how powerful an opponent to the operation he would prove.*

* Mr. Gowing has undertaken to repeat the lecture on the 30th instant, at the St. James's Library Institution, in London.

PROVINCIAL NEWS.

Colchester.—The foundation-stone of St. Michael's Church, Mylaud, was laid on Tuesday in last week, by Earl de Grey, the patron. The building was already in progress of erection. The inscription records various names, but nothing is said about an architect, unless he comes in with "many others" present. The preparers of the inscription, we think, might at least have done even the patron, if not the architect (perhaps there is no architect), the honour of making some allusion to the latter, as well as to the builder, considering that the Earl is president of the Institute of Architects. His lordship would have listened with more satisfaction to such an allusion than to "Mr. W. Cant and Mr. W. Wynnell, the church wardens," however respectable or interesting to a far posterity these worthy gentlemen may yet be. The stone is said by a local paper to have been deposited by the architect and builder.

Farlaugh.—The church here has been under repair or restoration, and was re-opened on 14th ult. The repairs have been executed by Messrs. Ryall and Ryley, of Louth, from the designs and under the superintendence of Messrs. Maughan and Fowler, of same place, architects. The outer walls have been almost entirely rebuilt, and new windows, of Perpendicular character, in keeping with the rest of the church, inserted. New roofs have been placed over the whole church, and covered with lead, "which," says the *Lincolnshire Chronicle*, "forms an exception to the system generally pursued in church affairs. It is, in many cases, thought not unbecoming to take the lead with which the piety of our forefathers enriched the building, and exchange it for the cheaper and viler material of slate or tile; but surely that which the liberality of one age thought it not unbecoming to offer for the decoration of the house of God, the parsimony of the present day ought not to be permitted to make a gain of." These repairs, as a whole, it adds, have been carried out in a liberal spirit. The seats have standards with poppy heads, carved by Mr. T. W. Wallis, of Louth; and the screen, which formerly stood between the chancel and the nave, has been repaired and removed to the tower arch. A heating apparatus has been introduced, supplied by Mr. Cartwright, of Louth.

Hitchin.—In consequence of the increasing importance of Hitchin market, the erection of the Corn Exchange, and the range of warehouses adjoining, a few of the inhabitants have resolved on making a vigorous effort to remove a block of houses which much impedes the appearance of the market square. To promote this object, a public meeting was held, when it was stated that the expense of removing the whole clump of buildings would be 1,700*l.* A subscription was commenced in the room, and the sum of 850*l.* at once announced, and on the following day an additional sum of 180*l.* was subscribed by persons not present at the meeting. There is some vigour and spirit in Hitchin. Had it been Birmingham, there would have been immense difficulty in raising such a sum, we suspect, for any public improvement.

Faringdon.—The ancient parish church of All Saints, Faringdon, is about to be further repaired. Much has recently been done, by the erection of a new transept, for the accommodation of the children of the National Schools, and by the removal from the walls of accumulated coats of plaster. It has been determined, however, to remove the present dilapidated and unsightly pews, and replace them with open benches of oak. Gas-light is also to be introduced, and the edifice heated by means of a warm-water apparatus. The contract has been taken by Mr. Woodroffe, of Reading.

Burnham.—Mr. Austin, of the General Board of Health, lately visited this place and inspected the progress of the drainage works. Mr. Whitehead, the surveyor of the Local Board, attended him. Mr. Austin reported to the Local Board that the treacherous nature of the subsoil—a soft slippery clay—had presented unusual difficulties in the execution of the contract; but the contractor had done his best to carry out the work efficiently, and the main drain from low-water mark to the manure tank was very nearly finished. The cause which specially called for Mr. Austin's presence was a difference between the surveyor and contractor with regard to the manure tank,—the former insisting that his original plan should be worked out, and the latter declaring that it could not, and would not succeed, the nature of the soil exerting a pressure upon the walls of the tank, which twisted and turned them so as to render them useless. Under the advice of the surveyor, the Local Board expended an additional sum of money to pile the earthwork: this had been expended in vain, and after the contractor had endeavoured, by a considerable expenditure of time and money, to carry out Mr. Whitehead's plan, he at last reported to the Board its impracticability, and Mr. Austin was called in to decide between the surveyor and the contractor. Mr. Austin reported that owing to the peculiar character of the soil, the plan must be abandoned, and advised that the Board should require another plan and specification, to be made the subject of a fresh contract. He regretted that the clerk of works persisted in compelling the contractor to pursue a plan which at an early period gave indications of insecurity, thus causing much useless expenditure; but possibly in the difference raised upon the matter, both parties were somewhat in fault. Mr. Austen's advice coincided in the main points with the opinion of the chairman of the Local Board. We are quoting the local papers.

Gloucester.—Coal has been discovered under this city, at a depth of 11 feet from the surface, by men at present engaged in working sewers.

Bilston.—At a monthly meeting of the Town Improvement Commissioners, the tender of Messrs. Burkitt and Nelson, of Wolverhampton, to erect the chapel and other necessary buildings, with a boundary wall, of the proposed cemetery, was accepted. Messrs. Burkitt and Nelson's offer was the lowest of three, and its amount was 2,125*l.* The shortness of the water supply was mentioned by the chairman, and members expressed their apprehension of the shocking effects of this state of things upon the re-appearance of cholera.

Newark.—The laying of the foundation-stone in the parish church chancel, of a new "reredos," took place on 16th ult. when a leaden case, containing a record of the event, written upon parchment, was deposited in a receptacle prepared for it, under the stone.

Manchester.—A circumstance, says the local *Courier*, occurred on Monday which, we trust, will have the effect of inducing the owners of some of the old and more dilapidated warehouse property in Manchester to take measures for its safety, as also that of the public. On that morning three or four squares of brickwork, just above the foundation, in a warehouse in Marsden-square, Market-street, suddenly gave way, and from the very decayed state of the property, there was every probability that the entire structure would fall to the ground. As soon as the discovery was made, the building was shored up, the traffic through the street cut off by a rope thrown across, and business suspended. In all probability the whole will have to be taken down and rebuilt.

Stockport.—At a meeting held on Thursday week, at Edgley, the formation of 803 yards of main sewer, for the proper draining of the several streets and public places within the division, was resolved on; application to be made to the corporation to make such sewer, and in the event of their doing so, the surveyors of highways to be authorised to defray one-half the expense.——In anticipation of another attack of cholera in summer, the sanitary committee of the town council are bestirring themselves to remove all predisposing causes of disease. Though the corporation has the power, however, to remove all nuisances within the borough, they have not the means to enforce that power. The guardians were desirous to aid the corporation in the matter, but there seemed to be some doubt as to the range of their jurisdiction also, and at last they determined that a guardians' committee be appointed to confer with the sanitary committee of the corporation on the subject.

Bradford.—A misunderstanding has arisen connected with the plans of the committee for the enlargement of the church. Several plans

had been laid before the parishioners for their approval, which would have increased the accommodation to the extent of about 400 free sittings, at the least possible expense; and the subscriptions were such as to warrant them in believing that the proposed enlargement would have been carried out. With this view the draft or a citation for a faculty was drawn out, giving particular attention to vested rights. Objection, however, was taken, on the ground that those who would be most affected by the faculty had not been *consulted*. The result was, that caveats were lodged against the application for a faculty; and if no arrangement can otherwise be made as to costs, which alone are now in the way of an arrangement, the matter must be decided in the Ecclesiastical Court. It has been determined to resist payment of costs got up in opposing the faculty; and thus money which might have been expended in substantial improvements, must go to fill the ever-craving never-glutted maw of the law. As a beacon light to warn other church-improvers these few particulars may be of use.

Preston.—A memorial window has been presented to Christ Church, Preston, by Mr. E. C. Lowndes. The compartment in the centre represents, on a deep purple ground, the scene described in the Gospel according to St. Mark, in the tenth chapter at the thirteenth verse. In the background there is a group consisting of four of the Apostles.

Gateshead-on-Tyne.—Extensive warehouses and modelling-rooms have been erected next the river by Messrs. Aspdin, Ord, and Co. Portland cement manufacturers. The works are situated a short distance below the Newcastle high-level bridge. They have been partially in operation for upwards of twelve months, but as yet the entire cement ornamentare has not been completed. The wash-mill, extensive drying-sheds and kilns, are located at the back of the main building. There are several pairs of stones in use, propelled by powerful engines; and it is computed that about 2,000 casks of cement weekly will shortly be turned out of this manufactory. Mr. Johnston, of Newcastle-on-Tyne, is the architect.

Eckford.—The Duke of Buccleuch, according to the *Scotsman*, is redeeming his pledge of more zealous attention to the interests and household comforts of the working classes on his estates. He is at present erecting a range of dwellings at Eckford, in Roxburghshire, to be occupied by the day labourers, foresters, and others on his estate of Eckford Barony. Each house contains five apartments of one kind and another, and is constructed on the most approved style of sanitary and household comforts.

Granton.—The temporary timber staging which has been recently run out from the Duke's Western Breakwater, at Granton, on the Forth, near Edinburgh, for the purpose of conveying materials for the formation of the outer arm of the eastern breakwater, has now been completed, and is found to answer the purpose of its construction. At high-water the first waggon-load of stones for this new undertaking was teamed over from the other end of the staging. The ceremony took place under a salute of guns, and a display of flags in the harbour, which will, it is said, now constitute a complete harbour of refuge, and a formidable rival we should think to Leith.

CONDITION OF LAMBETH.

The letter under heading "A Sanitary Contrast," in last week's number of your valuable paper, induces me to offer a few remarks upon the subject to which he principally refers, viz., the manufactories upon the right bank of the river, opposite the Penitentiary. Independent of the abominable and sickening accumulation of stenches which issue from the whole neighbourhood, to the obvious jeopardy of the lives of Her Majesty's lieges in their immediate vicinity, these misanthropic manufacturers, seemingly indifferent to all principle of good citizenship, by way of adding insult to injury, suffer their pestiferous abominations to issue from chimneys no higher than the ordinary level of house-stacks. Now what I wish to ask through the medium of the *Builder* is, why should this be suffered any longer, when the manufacturers of other large towns engaged in the same deadly occupations of bone-crushing, candle and soap making, &c. &c. are bound to carry up their chimneys to at least three times the height, and, as the phrase runs, "obligated to consume their own smoke?" Surely this matter of carrying up their chimneys might be made incumbent upon the Lambeth manufacturers, ere summer shall again usher in King Cholera and his attendant train of evils.

Legion.

OUR OPEN SPACES.

It is singular when so much outcry is made about sanitary measures, and for giving space and fresh air to the metropolis, and when indeed great expense has been incurred for that purpose, that, wheresoever there is an open space existing, or one has been made at great cost, there is always some plan or proposition for covering it with buildings.

For instance, look at Leicester-square where the erection of the "great globe" has been suffered; a piece of ground that, if attainable by the proprietor of the great globe, might have been obtained as open space for the public.

Look at the proposition for covering the open quadrangle of the British Museum; a space which might be decorated with a fountain and sculpture, and dedicated to the public as an agreeable promenade, after wandering through the galleries of the museum.

Look at the proposition for erecting the law-courts on the area of Lincoln's-inn-fields: one of the finest open spaces in the centre of the metropolis, where most wanted; and respecting which the only regret is, that the gardens are not open to the public under regulations, and that the approaches are not made thereto by streets connecting the Strand and Holborn; an improvement so long talked of and so much wanted.

Look at the open space lately made at the south-east corner of St. Paul's-churchyard, which, by the planning out of the pavement, it appears is again to be blocked up with buildings.

Look at many of the so-called improvements in the City,—I speak not in ill will, but with regret,—where after the expenditure of large sums, so little has been gained to the public; as in the instance of Gresham-street West, where the new tortuous and narrow thoroughfare is continually blocked up; as it is likewise in the connection of Tower-street and East-cheap, and will probably be in the approaches to the Blackwall-railway in Fenchurch street.

Look at the insidious attempts continually made for enclosing and building on Hampstead-heath, Blackheath, and almost every common round London; a subject that requires the careful watch of Government and the public to prevent.

The notice of these things in your valuable paper may be, and frequently is, of great service; and with this object in view they are submitted.

Respirator.

RUSHALL CHURCH COMPETITION.

A circular issued by Mr. Cowley, the churchwarden, gives some curious particulars of this competition.

Mr. Cowley had pledged his word, as a gentleman, to many of the competitors, that while he had anything to do with the committee, equal-handed justice should be done—confidence was thereby established, and for the "trifling outlay of 1,100*l.* no less than thirty-nine plans were sent in for consideration." How have they been rewarded? asks the writer, and he answers, not with justice.

"Two of the plans were laid aside for further consideration, viz. Mr. Johnson's, of Lichfield, and Mr. Robinson's, of Wolverhampton, and it was during this examination that the remaining portion of a fortieth plan arrived, which presented as we considered a beautiful church with nice architectural points, and in addition was offered at a cost of 100*l.* less than we had advertised for, besides containing a larger number of sittings.

We had, therefore, no alternative but to request an interview with this architect, when he pledged his word, from his knowledge of the cost (having built several churches upon this or similar plans), not only to guarantee its being done, but to find such a respectable builder as would be satisfactory to the committee, for the sum mentioned, namely, 1,000*l.* which was afterwards advanced to 1,300*l.* for alterations in the tower and enlarging the churchyard." Now bear in mind the estimated amount of cost, 1,300*l.* We advertised for builders, and the first tender we opened was *only* 2,670*l.*; the second, 2,300*l.*; the third, 2,054*l.*; the fourth, 2,275*l.*; the fifth, 2,346*l.*; (*now judge*) and when the architect was called upon, he not only declined to build the church, even with our adding 15 per cent. to the estimated cost, which would cover the additional increase of labour and material, but declines also to bring forward his promised builder."

The churchwarden has sought to get fresh consideration for the other competitors, but up to this time has not succeeded, and therefore publishes his protest, for which, as it seems to us, he deserves the thanks of all architects. One of the competitors, writing to us on the subject, asks if the transaction does not show "that it is ridiculous for committees to ask for estimates with competition drawings. They should say what accommodation they require, what money they wish to spend, and what materials are to be used, and then any one who knows anything about the matter (and who ought to be an architect called in for the occasion) would soon decide as to which were the best designs, and which would come nearest to the sum to be spent. As it is, if an architect sends in a very elaborate design, and says it can be executed for 2,000*l.* and another sends in a very simple design and says it cannot be done under 5,000*l.* the committee believe the former one, and so the honest have no chance at all."

MODELS AT MARLBOROUGH HOUSE.

A collection of models in clay and wax, said to be by Michelangelo, Raffaelle, Donatello, &c. and known as the "Gherardini Collection," is now being exhibited at the Museum of Ornamental Art, Marlborough House. The collection consists of sketches or studies, for the most part mere fragments. The whole collection, which consists of perhaps thirty examples, is offered by its present proprietor for 3,000*l.* Taking the most liberal view of the assumed authorship of the fragments, and admitting a certain amount of power and beauty in some of them, we cannot join those who would urge the Government to purchase them at such a price.

SOCIETY OF BRITISH ARTISTS.

The thirty-first annual exhibition by this society, now open in Suffolk-street, consists of 732 paintings and drawings, and seventeen pieces of sculpture, ten of which latter are by two artists, John Bailey and D. Hewlett. It is a very agreeable collection, and will be considered, we have no doubt, above the average in merit. Mr. Hurlestone, Mr. Baxter, Mr. W. Salter, Mr. Buckner, ("Portrait of Master Barkley," 73), Mr. Clint, Mr. Woolmer, Mr. J. J. Hill, ("Corn Flowers," 83), Mr Wilson, jun. "Off Folkestone," for example (28), and Mr. West, exhibit pictures as good as they have ever painted; and there is a fresh candidate for position amongst landscape painters, Mr. W. W. Gosling, whose works show remarkable power: we would especially mention No. 39, inscribed—

> When shaws be sheene and shrads full fayre,
> And leaves both large and longe,
> It is merrie to reste in ye fayre foreste,
> And heare ye small birds' songe."

Mr. Hurlestone's principal picture "The Last Sigh of the Moor," is full of beauty, and worthy of place in any collection. His "Portrait of Mrs. Andrew Cuthell and Daughter," will have attention from many of our readers because of its connection with one known to them. Mr. Baxter's "Portrait of a Lady," (149), is a charming work; to our minds even better than his "*La Pensée*" (48). In (92) "Scarborough," Mr. Clint has depicted a stormy sea with great force: a little alteration would make it one of the pictures on which he

might rest his reputation. No. 420 by the same is also excellent. We are glad to see Mr. Pyne again represented here. He contributes a large view of "Berne" (118), painted to carry out his own theory of light and colour. Mr. H. J. Boddington is "Amongst the Welsh Mountains" (135), and we all know how he treats them. The result is one of the best landscapes in the gallery. "A Quiet Pool on the River Mawddach" (428), by the same painter, is a worthy companion for it. "The Golden Image"—the dedication of the image that Nebuchadnezzar the king had set up—by Mr. J. P. Pettitt (227), is a large and remarkable work,—remarkable not for beauty, but for elaborate painstaking and extent. Cole's "Ebenberg" (10); Woolmer's "Well in the Wood" (72); Tennant's "Valley of the Usk" (173); the "Harvest Field" (174), by G. A. Williams; "On the Trent," by J. C. Ward (215); "The Toast," by J. Andrews (264); "Gayeté," by W. D. Kennedy; Duffield's "Fruit" (345); "Isabella," by Earles (415); and Bentley's "Fishing-Boats in the Seine" (450)—challenge attention, and well repay it.

THE THREATENED LONDON CHURCHES.

Our attention has been called to the fact that the Bill introduced by Lord Harrowby into the House of Lords, under the title of the "Church Buildings Act Amendment Bill," and announced for second reading on Thursday, 30th March, in fact contemplates the carrying out quietly the threatened measure against the City churches. We have not had an opportunity of seeing this Bill; but we need scarcely say how desirable it is that it should be watchfully looked to, and resisted by all interested in favour of the retention of the doomed City churches.

RAILWAY SIGNALS.

The subject of signals, self-acting and otherwise, is at present exciting more than even usual interest. The problem which we long since suggested for solution by men of mechanical ingenuity, how best to arrange self-acting apparatus whereby intimations could be given to passing trains as to the probable whereabouts of trains a-head, and other useful information, *in addition* to whatever the signal-men employed on the line might be called upon to do,—not by any means as a substitute for their watchfulness where employed,—appears to be very generally taken as a basis for the application of proposed or invented apparatus. Thus in the *Birmingham Journal* of last week, we observe Mr. William Simpson, an agricultural implement maker, proposes that a "self-acting alarm signal" invented by him, should be laid down at intervals of a mile along the whole extent of a line. The apparatus is intended to inform an engine-driver whether or not the previous train is sufficiently far a-head to enable him to proceed with safety; or if from any accident a train is brought to a stand-still on the line, both the up and down-trains can be made cognisant by it of the fact. "This," says the *Journal*, "is mainly effected by a system of jointed iron bars, placed a couple of inches outside the rails, and in length altogether some twenty or twenty-five feet. These are acted upon by a couple of small pendant iron rollers, attached to each side of the locomotive. The one to the right, as the train passes along, depresses a spring-bound iron bar, so connected by a strong tie-rod, with a jointed bar outside the rails on the left-hand side, that it is raised at almost the same moment. By an application of the pendulum movement, sustained by the weight of the bar, it does not resume its original position, that of being "flush" with the rails, until fifteen minutes have elapsed, but the time may be varied at will, according to the traffic requirements of the line. [This is precisely the *idea* we gave of what ought to be kept in view in the invention of such self-acting signals.] There are two rollers attached to the engine. The second, that on the left-hand side, is connected with a loud-sounding bell, enclosed in a box, which may be used by the driver or stoker as a seat, if sitting is permitted. While the bar on the left is elevated, a consequent pressure upon the roller on that side, as the engine passes along, tells the driver and his companion, if they are not quite deaf, that another train has preceded him within a certain time—and according to the intervening space, from one minute to fifteen, and with as many strokes of the hammer, the bell impresses upon him the necessity, with greater or lesser urgency, of bringing the train to a stand-still, or proceeding cautiously, as the case may be." Mr. Simpson applies the same invention to the announcement of the approach of a train to a station or terminus; and makes it available for the officials to stop a train at any given distance if there is another in the station, or if there is an obstruction at a crossing. We quite agree with the *Journal* that the cost of even such signals as these ought not to interfere with their introduction if otherwise eligible, since the cost of collisions to companies, keeping out of view all consideration of the public safety, far exceeds any cost ever likely to be required in the laying down of an efficient system of self-acting signals; but we must warn our contemporary against the proposal to substitute any system of self-acting signals instead of the employment of the signal-men, inasmuch as such a proposal has already afforded, and ever will afford, a plausible excuse for railway directors rejecting it contemptuously, were it even the invention of superhuman ingenuity and wisdom, under pretence of regard for the public safety—not to be trusted to mere self-acting signals,—but really out of a selfish regard to a short-sighted economy.

An apparatus has been patented by Mr. H. King, of Gilbert-street, Oxford-street, for enabling the guard of a train instantly to sound an alarm signal, when circumstances require it. "It consists of a small but powerful pair of bellows, fixed on the roof of the guard's brake-van, the nozzle of which is connected to a powerful whistle. The top plate of the bellows is continued in length considerably beyond the base, thus forming a powerful leverage, enabling the signal to be sounded exceedingly loud, and capable of being heard at a great distance. There are springs inside, which always keep the bellows extended for use. The apparatus is also applicable to omnibuses, enabling a passenger to call the guard's attention, without disturbing his fellow-passengers. A cord and ring attached to the apparatus outside is brought through the roof, and a passenger requiring to get out has only to pull it downwards, which sounds the signal. A code of peculiar signals may, by this apparatus, be arranged, depending on the number, rapidity, and duration of the several sounds." So far as regards railway trains, the misfortune is, that "guards" are but too seldom aware in time "when circumstances require it." It often happens that passengers are aware of the peril to a train, or to a carriage, as from its jumping out of the line, taking fire, breaking axle, &c. long ere a "guard" knows anything about it; and as we have often said, it is nevertheless a very questionable privilege to allow every nervous old woman of either sex to have the power of stopping a train at will, as even lurking youths or curious children might: there is, therefore, an absolute necessity for leaving this privilege or power in the hands of the guards alone: it is thus manifest that the passengers ought to have a direct means of communication with the guard; but how is a whistle, a flag, or a light, to convey the assurance to the guard that a passenger *has* serious reason for the alarm? It may do well enough for calling the guard to a carriage-door, but how is he with safety or propriety to get there: this, it seems to us, is the real and essential point to be settled: once let the guard have a safe or at least available means of passing along the train, and passengers may safely be entrusted with the use of whistles, &c.; but till then these *must* be confined to use between the guard and driver on the *comparatively few* occasions when the guard is awake to the peril while driver or passengers are not. Were there a guard ahead on the engine itself, as he ought to be, and ere long *must* be, a guard might indeed be a guard; but as it is, he is not so, except on occasions when he imperils his own life, as he has certainly repeatedly done, by scrambling along the tops of the carriages, in order to communicate both with passengers and drivers, or to reach engines flying along without any driver on duty, as has actually occurred.

An electric telegraph for communication between guards and drivers has been invented by Professor Glukmann. His apparatus modified has been attached to one of the express trains on the London and North-Western, and has been running between London and Birmingham. The apparatus is said to be simple and effective. The conducting wires are enclosed in gutta percha and attached to each carriage in a wooden case under the frame of the carriage. The bands enclosing the wires at each end of the carriage are elastic, and can be hooked and unhooked as occasion requires, thus continuing the communication from carriage to carriage. The battery is fixed in the guard's van and a bell on the engine. The guard can give the signal to the engine-driver by placing his finger on a button, which causes the bell to ring on the engine continuously or at intervals. The engine-driver gives the signal to the guard as heretofore by means of the whistle on the engine.

While speaking of the electric telegraph in connection with the railways, we may here note that its extension to Aberdeen is said to have been decided on in connection with the Great North of Scotland line of railway, and that its further extension to Huntly and Inverness is talked of. His Royal Highness Prince Albert, it is said, has given 200*l.* for furthering the extension of the telegraph to Aberdeen.

In working the telegraphs at the Liverpool, Manchester, and London stations, a contemporary says that young women are now engaged. Their agile fingers, we have no doubt, will rattle over the keys with more rapidity than any young men's.

Notices of Books.

The Tradesmen's Guide to Superficial Measurement. By James Hawkins. Second edition. 5, Albion-place, Blackfriars-bridge. 1854.

This is a useful collection of tables, calculating from 1 inch to 200 inches in length, by 1 inch to 108 inches in breadth, forming, in fact, a ready reckoner intended for the use of "architects, surveyors, engineers, timber merchants, builders, carpenters, upholsterers, coachmakers, looking and crown glass dealers, painters, stonemasons, &c.;" and the fact of a first edition being exhausted, and a second called for, may be taken as evidence of its general accuracy.

The Millwright and Engineer's Pocket Companion. By William Templeton. Corrected and improved by Samuel Maynard. Tenth edition, revised. Simpkin, Marshall, and Co. London, 1854.

When a book has reached its tenth edition, little need be said to secure its further extension. All we shall do will be merely to indicate its contents, which have reference to, or comprise, decimal arithmetic, tables of square and cube roots, practical geometry, mensuration, strength of materials, mechanical powers, water-wheels, pumps, and pumping-engines, steam-engines, tables of specific gravity, &c. &c. with an appendix of mathematical tables, containing the circumferences, squares, cubes, and areas of circles, superficies, and solidity of spheres, &c. a new table of fractional numbers, and lithographic and other illustrations of machinery, &c.

VARIORUM.

Look here, you young card-castle architects and dirt-pie builders,—here are a few literary lollypops for those among you who behave themselves well; good books for good children. "The Black Princess," by Mrs. Jane M. Besset (Routledge, publisher), is a sort of juvenilized Uncle Tom's Cabin, stripped of its more adolescent horrors, but inculcating the same sympathies, and teaching the young idea how to shoot that savage beast called slavery, with a deadly arrow: it is attractively illustrated, too, and forms a pretty little present for children; as also does "The Lost Child," by the same author, and issued by Westerton, of Hyde-park corner. Another little *bon-bon* we must specially recommend to those young ladies who are looking on card-castle's workmanship with admiring eyes and *quasi*-maternal armfuls: "Memoirs of a Doll, written by Herself:" think of that!—and a clever little work it is too, adapted from the French, by Mrs. Besset, and published by Routledge. There is a moral and instructive purpose in these little books, which is commendable. Our next in hand is for behoof of mamma herself, as well as of others among the households, at least, of our readers, if not amongst our readers themselves, especially upholsterers and others, "The Art of Cleaning, Dyeing, Scouring, and Finishing, on the most approved English and French Methods, being a perfect compendium of all that is essential to be known in dyeing silks, woollens, cottons, feathers, bonnets, &c.; to which is added instructions for cleaning and scouring carpets, hearth-rugs, ancient tapestry, bed and window curtains, &c." By Thomas Love, a working dyer and scourer, and issued by Messrs. Longman and Co. Having thus allowed Mr. Love to explain his own purpose, all we need say is that the book seems to be the *bonâ fide* production of one well and practically acquainted with his subject.

Authorized Reports by Messrs. Bazalgette and Haywood and by Sir William Cubitt, on the Sewage Interception and Main Drainage of the districts north of the Thames, have just been printed by Truscott, of Nelson-square. All we

need at present say is that this is part of the general scheme which the metropolitan commission were on the eve of commencing, when the Home Secretary's opinion led them to resign, and that the whole cost of it for both sides of the Thames, according to Sir W. Cubitt, would be 3,000,000*l.*

Miscellanea.

Holyhead New Harbour.—The men who were out on strike have all returned to their labour, and everything is being pushed forward with the greatest activity. The number of men now employed is about 1,500, with a dozen locomotive steam-engines, and about 4,000 tons of solid rock are deposited daily The length of the breakwater is 5,000 feet, and it runs out to the Platters-buoy. About 500 feet remain to be completed; and the contractors, Messrs. J. and C. Rigby, of London, are under contract to finish this by August next.

Statistical Society.—At the anniversary meeting of the Statistical Society, on the 15th ult. the Right Hon. the Earl Fitzwilliam, president, in the chair,—the report of the council on the progress of the society during the past year was a satisfactory one. The number of members continues to increase, notwithstanding the numerous deaths during the past year. All the sources of income exhibited an increase over the corresponding items of the previous year, and in the aggregate had increased 13 per cent. as compared with the preceding year (1852), and 33 per cent. as compared with 1851. Attention was called to the increased and increasing sale of the society's journal. This item in the account showed an increase of 30 per cent. as compared with the previous year (1852), and 80 per cent. as compared with 1851. The chairman addressed the meeting at some length on the subject of the report; and Lord Overstone, in moving a vote of thanks to the chairman, delivered an exposition of the principles of Statistical Science.

Sales by Public Auction.—At the Mart, recently, by Messrs. Shuttleworth and Sons, a freehold estate, comprising a commercial establishment, No. 65, Friday-street, Cheapside, let on repairing lease at 225*l.* per annum; sold for 4,760*l.*: a freehold house and shop, No. 9, Earl-street, Blackfriars, producing 40*l.* per annum; 905*l.*: a freehold house, No. 196, High Holborn, let on lease for a term, of which ten years will be unexpired at Midsummer, 1854, at a ground-rent of 11*l.* 11s. 6d. per annum; sold for 780*l.*: a freehold house, No. 20, Kirby-street, Hatton-garden, let at 30*l.* per annum; sold for 585*l.*: a freehold house, No. 21, Hatton-garden, let at 28*l.* per annum; sold for 375*l.* By Messrs. Gadsden and Winterflood.—A leasehold house, No. 57, Marchmont-street, Brunswick-square, let at 50*l.* per annum; held for forty-six years unexpired, at 13*l.* 13s.; sold for 375*l.* At Garraway's, by Messrs. Rushworth and Jarvis.—Two leasehold houses, Nos. 10 and 11, Darlington-place, Vauxhall, producing 60*l* per annum, held for eighty years and a quarter, from 1825, at 12*l.* 12s.; 420*l.*: a leasehold house and shop, No. 129, Tooley-street, let at 38*l.* per annum, held for sixty years from 1819, at 6*l.* 16s.; 200*l.*: a leasehold house, No. 7, Brunswick-street, Wells-street, Hackney, let at 14*l.* 6s held for ninety years from 1841, at 2*l.* 5s.; 80*l.*: a similar house, No. 8, Brunswick-street, let at 25*l.* held for ninety years from 1841, at 2*l.* 5s.; 140*l.*—*Morning Advertiser.*

Why should Labour be Drudgery?—Drudgery is one thing. True labour is another. No man has any right to be a drudge; no man was ever made for that. If true to himself, he cannot but be something more. The seeds of something more are in him. In his very nature there wait faculties to be unfolded, which he has no right whatever to neglect,—faculties religious, moral, intellectual,—in exercising which he lifts himself above the sense of want, above the power of fear, of fortune, or of death, feels his immortality, becomes himself what God intended him to be. In any kind of business or labour he can find sphere for the exercise of these his greatest faculties, if he cannot he is bound to labour somewhere else. No one has a right to live merely to "get a living." And this is what is meant by drudgery: drudgery is not confined to the labour of the hands, nor to any one class of occupations. There are intellectual and fashionable drudges; and there are hard-working, humble labourers, more free, more dignified, and manly in all they do, or look, or think, than any who look down upon them. Some soil their hands with the earth; others soil their minds indelibly by the pride and vanity which keep their hands so delicate. The true man "stoops to conquer." The vain man wears his head aloft, while the rock is wasting from under his feet, and the glow of disinterested activity, the beauty on which he prides himself, fades from his face.—*Ideals of Every-day Life*

Telegraphic Progress in America. — The length of the telegraph lines in the United States, according to the Exhibition-Report by Mr. Whitworth, exceeded 15,000 miles in 1852, and has since considerably increased. The most distant points so connected in North America are Quebec and New Orleans, 3,000 miles apart. When the contemplated lines, connecting California with the Atlantic, and Newfoundland with the main continent, are completed, San Francisco will be in communication with St. John's, Newfoundland, distant from Galway but five days' passage. It is, therefore, estimated, that intelligence may be conveyed from the Pacific to Europe, and *vice versa*, in about six days. The cost of erecting telegraphs does not average more than 35*l.* a mile throughout the States. The charge for messages from New York to Washington, 270 miles, is 50c. (2s. 1d.) for ten words, and 5c. (2½d.) for every additional word. The charge to the press is 1c. a word, under 200 miles, 2c. between 200 and 500; and the New York papers, bearing the expense jointly, publish every day as much matter received by telegraph as would fill two columns of a London newspaper. Commercial men use the telegraph to a very great extent, and it is used by all classes. Telegraph wires in towns are almost universally carried along the tops of houses, or on poles erected in the streets, instead of being conveyed in pipes underground. Lines are in some cases erected by private persons for their own particular use. A manufacturer in New York, for instance, has a telegraphic wire carried over the tops of the houses intervening between his office, in one quarter of the city, and his works in another, having obtained, without any trouble, the permission of their various owners.

The Well Controversy.—Visiting annually those readily-accessible watering-places, Margate and Ramsgate, I have been much struck with the extremely foul condition of the cesspools in these places: proper drains do not exist. In immediate proximity are the wells, acting, I believe, in many cases as drains; inasmuch as chalk itself is a fine natural drain, readily absorbing moisture, as may be seen in the case of heavy rains, half an hour afterwards little or no trace of water being visible. Many complain of diarrhœa in consequence of the water there being of so inferior a quality. To what extent, if any, this is attributable to the vicinity of cesspools, is an important matter for inquiry.—S.

A New Sort of "Parcels Delivery" Scheme. —Some few of our older readers, we dare say, may recollect that on one occasion,—if we mistake not, while announcing the invention of Mr. Whishaw's Telecomphanon, or gutta percha speaking-tube, at that time supposed by some to be capable of conveying verbal messages to an indefinitely great distance,—we started the question, in scarcely a very serious way, whether notes and letters, or at least written pellets or rolls of paper might not themselves be conveyed through an air-exhausted or otherwise actuated tube, as an occasional succedaneum even for the electric telegraph itself. This idea was afterwards seriously adopted by some of our contemporaries. It next turned up in France; and now we find it has reached America, where, it is said, "The project for an atmospheric conveyance tube between New York and Boston has advanced with a prospect of being carried out. It will be 200 miles in length; and small parcels are to be sent from one end to the other in 15 minutes." Of course we shall be gratified to find our idea carried out in earnest.

Derby Foundries.—On the 18th ult. a service of silver plate, with a set of dessert knives and forks, in a mahogany case, was presented to Mr. F. Wheeldon, by the workmen of the Phœnix and Derwent Foundries, Derby, as a testimonial of their esteem for his abilities and his kindness during the fourteen years he has had the management of the above establishment;—a mark of mutual good feeling creditable to all concerned.

The Reading Board of Health.—At a recent meeting, this board took into consideration a letter received from Mr. T. E. Blackwell, engineer, with reference to the resolution adopted at the meeting of 9th ult. on the subject of his employment to prepare a report on the drainage and sewerage of the borough. The board had modified the resolution to which Mr Blackwell had assented, by adding to his undertaking the proviso that the report, designs, and estimates, should receive the sanction of the General Board of Health. Mr. Blackwell declined undertaking to obtain the consent of the central board, unless specially employed by the local board to do so, irrespective of his own private judgment, or of the opinions of the local board, and under certain other conditions. A lengthened discussion ensued, the effect of which was to cancel the appointment of an engineer altogether; so that the Reading Board of Health are just where they were when they began with their sewerage and drainage scheme.

Inspectors of Nuisances.—There is a Bill in the House of Lords, which has just been printed (brought forward by Lord Lyttelton), to enable boards of guardians to appoint inspectors of nuisances, and to define their duties. By this Bill boards of guardians are to be empowered to appoint inspectors for a union, who are to assist the guardians under the 11th and 12th of Victoria. Authority is to be given to an inspector to enter premises where he believes a nuisance to exist; and, when admission is refused, an order of justice is to be obtained to compel admission. Protection is to be afforded to inspectors acting under the Act.

Exhibition in Boston.—An exhibition (in connection with the local Athenæum) of ancient and modern sculpture, paintings, specimens in geology, mineralogy, natural history, ancient coins, and other antiquities, &c. has been opened in this town. The charge for admission on the first day was 2s. 6d. The exhibition is one which reflects considerable credit on its originators. The walls are covered with paintings, several being works of considerable value. Among them may be mentioned a "Virgin and Child," by Leonardo da Vinci; "Dancing Boys," by Vandyke; "The Wood-Cutter's Rest," by Gainsborough, "Adoration of the Magi," by Rubens; "Charles the Second," by Godfrey Kneller; "An Old Man," by Wilkie, &c. &c. In bronzes, Mr. J. B. Stanhope, M.P. is the largest contributor. Mr. W. A. Dunn, of Louth, exhibits a number of models in Irish bog oak; the Rev. E. Trollope some valuable and curious specimens of ancient and modern china; Mrs. Joseph Smith a large assortment of Chinese curiosities; Sir H. Dymotte, Bart. and Sir Montague Cholmondeley, Bart. several suits of armour; Mr. Sayles, Mr. Peck, and Mr. Toynbee, of Lincoln, a selection of ancient New Zealand and Indian curiosities; Mr. Wallis, wood-carver, of Louth, several studies in his beautiful art; Lord Monson a beautiful piece of tapestry, worked in the sixteenth century for the Barberini Palace at Rome, and for many years deposited in the Bank of England, as security for a very large sum of money; and so on.

Genius and Labour.—I have known several men in my life who may be recognised in days to come as men of genius, and they were all plodders—hardworking, intent men. Genius is known by its works: genius without works is a blind faith, a dumb oracle. But meritorious works are the result of time and labour, and cannot be accomplished by intention or by a wish. The immortal thoughts that seem as if they flowed spontaneously from the soul of Shakspeare were nevertheless moulded in a die which doubtless required many years of unremitting attention to fashion it to his exquisite taste. His intellect, by constant study, had at length been trained to that perfect discipline which enabled it to move with a grace, spirit, and liberty incomprehensible to those minds that have not passed through the same severe ordeal. Every great work is the result of vast preparatory training. Facility comes by labour. Nothing seems easy, not even walking, that was not difficult at first. The orator, whose eye flashes instantaneous fire, and whose lips pour forth a flood of noble thoughts, startling by their unexpectedness, and elevating by their wisdom and their truth, has learned his secret by patient repetition, and after many bitter disappointments.—*Medical Circular's Address to the Students.*

Improvement of Labourers' Cottages.—We are glad to find that good use is already being made of the example offered by H.R.H. the Prince Consort at Windsor-park, and recently announced and illustrated in the *Builder*. The editor of the *Border Advertiser* has drawn the attention of its town and country readers to the subject in leading articles, based on our details, and very truthfully remarks, that if ornamental cottages of five rooms, &c. can be built in Windsor Great-park for 125*l.* each, then plain cottages of two and three rooms can be built in Selkirk for a sum that may be fairly covered by a rent within reach of the artisan. In our columns, moreover, numerous other instances occur in which improved labourers' dwellings have been erected at a less cost than these.

Cyclorama of Switzerland and Italy.—In the Baker-street Bazaar, where not long ago you found India, without its fevers, and could look at the buildings without having the sun in your eyes, the Tyrol, Switzerland, and Italy are now spread out for the delectation of travellers,—by 'bus or brougham,—the cyclorama of M. Reichardt. Ischel, Salzburg, Innspruck, Trent, Lausanne, Geneva, Milan, Leghorn, Florence, Rome, and Naples, are the salient points in the route, and form in the whole a very pleasant and interesting exhibition. The views were painted by Herr Heyl and Borgmann, in Berlin, and vary in degree of merit: the Chateau of the Tyrol, Geneva, Mount St. Bernard, and Florence, are amongst the most effective. Exception might be taken to the point of view selected in some cases—Milan, for example, is made especially uninteresting in consequence, but as a whole it is very satisfactory.

THE METROPOLITAN SEWERS COMMISSION.—In the Commons, last week, Sir B. Hall, in absence of the Home Secretary, put a question to the Under-Secretary with reference to the proceedings of the Commissioners of Sewers. It had been reported in the morning papers, he said, that the whole of the unpaid commissioners had tendered their resignation, leaving the business to be transacted by the paid commissioners and the officials, but that those gentlemen who had resigned, or intimated their intention of resigning, had met again and resolved to proceed with the drainage works, the estimated cost of which amounted to no less than 3,000,000*l.* sterling, and had ordered rates to be levied. He wished to ask whether the plans upon which these works were to be executed had received the sanction of the Home Secretary, and, if so, whether there would be any objection to lay such plans upon the table? Mr Fitzroy, in reply, said the sanction of the Secretary of State was not requisite for the commencement of any works undertaken by the Commissioners of Metropolitan Sewers, nor did the Metropolitan Sewers Act give him a control over the manner in which the Commissioners discharged their functions. The commission was under the Great Seal, and the only supervision exercised was like that over magistrates and other functionaries. The statement from the report as to public grounds did not appear to be quite correct: and he held in his hand a short memorandum furnished by the chairman, with respect to what took place, which he read to the House, and which nearly coincided in terms with our own report. The resolution, he said, did not refer to the commencement of the main drainage works; but it did not negative the commencement. The rates ordered to be advertised were partly to meet engagements already entered into, and partly to enable the commissioners to execute works now greatly needed. The amount of subordinate works alone urgently required far exceeded the resources which the commissioners could now command. Sir B. Hall then gave notice to move an address to her Majesty for copies of plans of the works proposed to be executed by the Commissioners of Sewers, with an estimate of the cost of such works.

BEDFORDSHIRE ARCHÆOLOGICAL SOCIETY.—The monthly meeting of this society was held on Tuesday in last week, Colonel Higgins in the chair. The Rev. W. Airy, honorary secretary, laid before the meeting a communication from the honorary secretary of the St. Alban's Society, announcing their anniversary meeting for 17th June, and inviting the Bedfordshire Society to join them. Some presentations were made. A letter from Mr. Thomas Abbott Green was then read, in reference to the proposed excursion and spring meeting of the society. It was resolved that the excursion be taken, at an early day in May, the society to meet at Clapham, proceed by Oakley, Stevington, and Pavenham, on to Felmersham and the Grange, after which, papers will probably be read by the Rev. J. Taddy, the Rev. W. Hartshorne, the Rev. W. Monkhouse, &c. An order was passed for the secretaries to procure a large blank-paper book, in order that members may insert all local prints of historical, topographical, and antiquarian interest, and scraps and cuttings relating to the county; the object being to preserve rough materials to aid in the compilation of local and county histories.

HAMBURG COMPETITION.—A programme of the competition for the new Town-hall at Hamburg, advertised in our columns, will be found at the *Builder* Office, or may be obtained of Williams and Norgate. A translation of it will be found at The Institute of Architects. The designs are to be sent in on or before the 15th of October, 1854, at two o'clock P.M. sealed and carriage paid, to the office of the Syndicate. The drawings are to be marked with a motto, and accompanied by a sealed letter, containing the name and address of the competitor. All designs sent in will be exhibited for a fortnight. A premium of 280*l.* is offered for the best design, and 200*l.* each for the two next best. The three chosen plans will remain the property of the state, which expressedly reserves to itself the right of making use of the whole or any part of each.

ARCHITECTURAL INSTITUTE OF SCOTLAND.—At the last meeting of the members of this institute, Mr. Cousins, city architect, in the chair, the subject for consideration was Ventilation, as illustrated by a paper read, and experiments performed, by Mr. Charles Watson, whose ventilation has been more than once described in our pages.

SEWER ACCIDENT.—A drain in New-court, George-yard, Whitechapel, having become choked with rubbish, Michael Kenney was employed to remove the obstruction. On Thursday he had opened the drain to the depth of eight feet from the surface, but not having taken the precaution of shoring up the sides, the earth gave way, and falling upon him, he was buried beneath a mass of nearly two tons weight. The inhabitants of the court in about half an hour succeeded in extricating him, but he was dead.

EMPTYING CESSPOOL UNDER NUISANCE REMOVAL ACT.—In the Whitechapel County Court, on Saturday in last week, a verdict for 11*l.* 3*s.* 4*d.* with full costs, was given against the lessee of premises in the parish of Whitechapel, incurred by the Poplar-law guardians, in emptying a cesspool which defendant had refused or delayed to cleanse at the order of the Thames police magistrates. A witness for plaintiffs, who emptied the cesspool, stated that he had to carry away the contents fifty miles out of town, and that he had charged as much as 20*l.* for emptying a cesspool. For defendant it was alleged that the charge was monstrous, and that the cesspool was an old one that had been filled up with brick rubbish. The Judge said he could not consider whether the charge was excessive or not: the guardians had been compelled to incur the expense while the defendant had had it in his power to make his own bargain, but had failed to do so.

SMOKE NUISANCE IN LONDON.—In the House of Lords the other day, Lord Redesdale said he thought it important that public notice should be given to persons who infringed upon the provisions of the Smoke Act of last session that the penalties imposed by that Act would be sued for against those persons who were taking no measures to consume the smoke made by their furnaces. These persons had had plenty of time given them by the Act to take measures for removing the nuisance, and he wished to ask the First Lord of the Treasury whether any steps had been taken to give notice to the occupiers of premises in this metropolis in which there were any furnaces which were required under the Act of last session, to consume the smoke arising from the same, from and after the 1st day of August next, and to the owners of all steamboats on the river above London-bridge, that information would be laid for the recovery of penalties against all such as should not, from and after the day appointed, comply with the requirements of the said Act? The Earl of Aberdeen said that the Commissioners of Police had ordered a return to be made of all the furnaces at work in the metropolis, the nature of the business carried on, and the name of the owner or occupier. No doubt notice would be given to those parties to comply with the Act previously to its coming into operation.

WHAT LEGISLATION SHOULD DO FOR THE HOMES AND HAUNTS OF THE POOR.—Legislation, in our humble judgment, would not go a hair's breadth beyond what the most urgent necessity demands, if, in addition to fixing such a proportion between the breadth of streets and the height of the houses which line them as would secure a sufficiency of light and air, it should also insist on various other things such as that to every tenement designed for the occupation of a certain number of families, a washing-house should be attached, and a certain space for drying clothes. In the case of the working classes, both the washing and drying of clothes have, in almost all cases, to be carried on in their own dwellings, thereby aggravating the discomfort and confusion of the small apartments in which they live, and tempting, perhaps, husbands and fathers to prefer the fatal attractions of the tavern to their own fireside. Legislation ought further to provide, by stringent and peremptory rules, for the frequent periodical removal of all those impurities which, as things now stand, it seems to be no one's business in particular to take away. Instead of leaving the obligation to see this done to be handled from one to another, as it is at the present moment, so that the police know not whom to charge with it, the owner of every tenement to which receptacles for such impurities are attached should be made responsible for his tenants, and recognised as the only party with whom the law has in this matter to deal.—"*Our Great Cities,*" *by Dr. Buchanan.*

PROVIDENT INSTITUTION OF BUILDERS' FOREMEN AND CLERKS OF WORKS.—We are desirous of enlisting support for the anniversary dinner of this very praiseworthy institution. It is fixed to take place at the London Tavern on Wednesday, April 19th, and Mr. George Baker, well known to numbers of our readers, will take the chair. The institution has been gradually making progress, each year augmenting the funds, and we shall hope to find the members leading their aid on the coming occasion, so as still further to increase its means.

NO CURE, NO PAY.—A curer of smoky chimneys brought an action on Saturday, in the Westminster County Court, against the Marquis of Breadalbane. The plaintiff had undertaken to cure some chimneys in the Marquis's house on the principle of no cure no pay. Verdict for the defendant, the judge considering that the plaintiff had not performed his agreement.

FALL OF A RAILWAY STATION.—A few days since, according to local papers, as the midday goods train was proceeding on the South Devon Railway from Plymouth to Exeter, a frightful accident occurred at the Newton Abbot station which is about half way between the two places. One of the trucks came in contact with one of the supporters of the roof of the up-station. Unfortunately, the supporter gave way, and the roof fell in with a tremendous crash. Fortunately, however, no person was injured, with the exception of the guard, and he escaped with only a few bruises.

[ADVERTISEMENT]

Destruction of Warehouses at Manchester by Fire:—Messrs. RYLANDS and SONS' Books, Papers, and Bank-notes preserved in one of CHUBBS' Safes, after fourteen hours' exposure to intense heat.

Copy of Messrs. RYLANDS and SONS' Testimonial.

"24, High-street, Manchester.
"Mar. 6, 1854.

"Messrs Chubb and Son,—

"Gentlemen, we have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you twelve years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the Evening of the First of March, when our entire premises were destroyed by fire. The Safe, after being subject to fourteen hours' intense heat, was unlocked on the Morning of the 3rd of March, the locks all answering to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper

"We are, Gentlemen, yours respectfully,
RYLANDS and SONS."

CHUBBS' LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fire-proof Safes and Chests; Iron Doors and Frames for Strong-rooms: all fitted with the Detector Lock. Complete illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's-churchyard, London: 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

TENDERS

For building two third-rate houses, and making additions, &c. to others, at High street, Hoxton. Mr. Manfred, surveyor.

Parry and Son	£1,484 0 0
Messrs. Tolley	1,450 0 0
Hawkins	1,288 0 0
Merrc (Hackney)	975 0 0

For works in Mitre-chambers, Fenchurch-street, for Mr. James Purasell. Mr. J. Mullens, architect

Lawrence	£1,855 0 0
Haines and Eyre	1,790 0 0
Ashby and Horner	1,775 0 0

Plumber's work:—

Taylor	149 0 0

For the erection of dwellings at Hounslow, for the residence of the non-commissioned officers of the 4th regiment of Middlesex Militia. (Reduced plan.) Mr. F. H. Pownall, architect. The quantities supplied.

Wilson and Rayham	£3 083 10 10
Hopkins and Roberts	2,985 0 0
Goddard and Gilbert	2,939 0 0
Biggs	2,887 0 0
Hurst	2,822 0 0
Nye (accepted)	2,783 3 6

For house in Fenchurch-street, for Mr. L. Nathan.

Haynes and Eyre	£3,007 0 0
Wood	2,582 0 0
King	2,480 0 0
Wilson	2,344 0 0
Rivett	2,326 0 0

GEORGE ROUTLEDGE and CO. FARRINGDON-STREET; the "Builder" Office, 1, York-street.

ADVERTISEMENTS.

TO JOURNEYMEN PAINTERS.

A SOBER MAN, who thoroughly understands his trade, may hear of EMPLOYMENT by applying at 91, Fleet-street, on Monday next, between the hours of Nine and Ten a.m. Wages, 24s. per week.

AN Architect in the country requires an ASSISTANT: he must have some knowledge of perspective, and be able to make out working drawings. To a genuine desire of improving in the profession, and a good point of his practice, this will prove a good opportunity. A moderate salary will be given.—Apply, in the first instance, stating all particulars, to Mr. FLOWER, 37, Great Ormond-street, Queen-square.

WANTED, by a respectable young man, a SITUATION as Improver, in the office of a Surveyor, Builder, or Timber Merchant. Has been accustomed to the measurement of timber, and also to measuring and valuing Work. Can be well recommended.—Address, ALPHA, 2, Eglinton-road, Kennington-park, Bayswater.

WANTED, by a respectable married Man, aged 39 years, a SITUATION as TIME KEEPER, YARD or ENTERING CLERK; is also willing to make himself generally useful. Address, J. Hodge, 21, Upper-place, Hampstead-road.

WANTED, by a steady, industrious Man, of business habits, a SITUATION with a Builder, at which trade he has had a long experience. Is well acquainted with every description of work and materials; can measure and value, and has taken the charge of extensive works. Has left because the charge of a job where there were 200 employed, whose time he kept and paid, and could for the materials, measured up and report daily on the work. Can well recommended. Address, ALPHA, 2 Eglinton-road, Kennington-park, Bayswater.

WANTED, by a respectable married Man, aged 39 years, a SITUATION as TIME KEEPER, YARD or ENTERING CLERK; is also willing to make himself generally useful. Address, J. Hodge, 21, Upper-place, Hampstead-road.

WANTED, a SITUATION as TIME-KEEPER, WATCHMAN, or PORTER by a man who has been from 14 years of age in good business, is well acquainted with accounts, &c. and understands the care of horses. A very good character from the present. Address, T. B. Vine Cottage, Brook-road Lines, Kensington.

WANTED, by a respectable YOUNG MAN, a SITUATION in a Builder's or Surveyor's office; is well acquainted with the duties of either. Good References given. Address to K. 69, care of "The Builder."

TO MASTER PAINTERS, BUILDERS, &c.

WANTED, by a steady Man, EMPLOYMENT in the PAINTING LINE. The country preferred. Address, personally, Mr. Pitcher, 1, Jacob-street, Mile-end-road, E.

WANTED, by a respectable, active, middle-aged man, a SITUATION as ENTRY CLERK, Timekeeper, or Foreman; where a confidential person is required. Can be seen at 9, Prince's-street, Hampstead-road.

TO CARPENTERS AND BUILDERS

WANTED to place an active and well-conducted Youth as TO BE PRENTICE, to a carpenter and builder, where he will be taught some of the duties of a Draughtsman. Address, with full particulars, to W. C. S. care of Mr. Cox, 10, Bedford-street, Strand.

WANTED, by the Advertiser, a RE-ENGAGEMENT in an Architect's Office. He can make fair and legible working and presentation drawings of construction. Refer to and from whom he has been engaged. Can be seen. Address A. B. C. Office of "The Builder."

TO ARCHITECTS &c.

A GOOD ARTISTIC COLORIST, OFFERS his SERVICES to Architects, for preparing Views for Competitions, and the introduction of landscape; also in general drawing and tinting. Terms very moderate.—Specimens of his Colouring may be seen by addressing A. Z. 24, Iron-shop-place, Hackney.

A GOOD PLUMBER wants a JOB. Reference if required. Direct to P. D. Office of "The Builder."

TO BUILDERS AND OTHERS

A RESPECTABLE Married Young Man, engaged in the City, would be glad to devote the remainder of his time as Bookkeeper or Copyist; is a thorough good accountant and extremely fond of figures; has no objection to take work home.—Address, CALCULATOR, Post-office, King William-street, City.

AS CLERK of WORKS, or General Foreman. One well experienced in Gothic and Elizabethan construction.—Address, X. P. PEARCE, Mr. Harris, Newsvendor, Gracechurch-street, East.

TO ARCHITECTS, &c.

A YOUNG MAN is desirous of an ENGAGEMENT in London; he is a good draughtsman, has plans and sections out, and has taken charge of specifications and quantities; perspective drawing, tinting, &c. Address, A. J. W. Mr. Morgan's, 11, York-street, Covent-garden.

TO ARCHITECTS AND SURVEYORS

A NEAT and clean DRAUGHTSMAN is desirous of a SITUATION, at a moderate salary.—Address, ALPHA, Mrs. Bradshaw's, 34, South-front, Southampton.

TO PARENTS AND GUARDIANS.

AN Artist of high talent and established reputation is desirous of receiving into his house a Young Gentleman whose views are professional as an ARTIST or PUPIL, where he will have the pleasure of studying in every branch, drawing and painting connected with the Fine Arts. A premium required proportioned to the time of engagement. Private references will be given and required. Letters addressed to R. W. Mills's Library, 1, York-place, Islington, will meet attention.

A GENTLEMAN, aged 32, who thoroughly understands heating, ventilating, accounts, drawing, and has an extensive practical knowledge of the business, wishes for a RE-ENGAGEMENT. Unexceptionable references can be given.—Address, E. B. Office of "The Builder."

TO ARCHITECTS

A GENTLEMAN, well acquainted with Gothic and Ecclesiastical Architecture, is desirous of an ENGAGEMENT. References unexceptionable.—Address, ALPHA, Post-office, Norwich.

EVENING EMPLOYMENT WANTED, by an ARCHITECTURAL DRAUGHTSMAN and SURVEYOR, disengaged after four p.m. either to prepare finished working drawings, or to take out quantities. Terms moderate. Apply by letter to F. C. No. 13, Manor-terrace, Carter-terrace, Walworth.

TO ENGINEERS AND MILLWRIGHTS

THE Friends of a strong active Youth, age 14, are desirous of placing him as an APPRENTICE; and as he has some knowledge of the use of tools and a desire to learn the trade, it is thought he would be found useful somewhere. Satisfactory references will be found on satisfactory Address to H. TORRE, Grocer, 50, Chapel-street, Edgware-road.

TO PLUMBERS AND GASFITTERS.

THE Advertiser, a Steady Man, wishes for an ENGAGEMENT as Plumber and Gasfitter, but would not object to fill up his time at glazing or painting. Address, H. A. Mr. WOOD'S, 1, Cross-street, Newington Butts.

TO ARCHITECTS, BUILDERS AND OTHERS

THE advertiser a YOUNG MAN, who is willing to make himself useful, is open to an ENGAGEMENT as UNDER CLERK in the office of either of the above. Salary moderate, permanency and improvement being his principal object. Good reference can be given.—Address A. B. 130, Castle-street, Reading.

THE Parents of a Youth who has served four years of his apprenticeship with an ironmonger that has given up business through severe illness, are desirous of TURNING HIM OVER to a FURNISHING IRONMONGER for the remainder of his term. The country not objected to. Address, J. A. 64, St. John-street-road, Sadler's-wells.

BUILDING LAND, HESTON.—TO BE LET, on Building Leases, for ninety-nine years, 1a. 3r. 2p. of LAND, in lots of 50 feet front, and great depth, eligibly situate for the erection of villa residences of from 50*l.* to 60*l.* per annum, on the Great Western-road, in the parish of Heston, within the Spring Grove Estate, in the parish of Heston, and within five minutes' walk of the Isleworth Station, on the loop line of the South Western Railway. For plans and particulars, apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth.

BUILDING LAND, TWICKENHAM.—TO BE LET on BUILDING LEASES for Ninety-nine Years, 2a. 2r. 37p. of LAND, with extensive frontages to the Richmond and Windsor Railway, and the high-road from Isleworth to Richmond, in lots of 60 feet frontage, with depths varying from 120 feet to 200 feet. It is very eligibly situate for the erection of villa residences of from 40*l.* to 60*l.* per annum. Adjoining Pope's-villa park, and the St. Margaret's estate, on which ten minutes' walk of the Twickenham and Richmond Stations.—For plans and printed particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth. If the above be taken as a whole it may be purchased cheap, but it will be let at 25 per cent. less than if let in lots separately.

BUILDING LAND, ISLEWORTH.—TO BE LET, on BUILDING LEASES for ninety-nine years, TEN ACRES of LAND, very eligibly situate for the erection of first-class villa residences, have lately been planted and laid out from London to Twickenham, and the Richmond and Windsor Railway, and within ten minutes' walk of the Isleworth and Brentford Stations on the loop line of the South Western Railway. For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth. If the above be taken as a whole it may be purchased cheap, but it will be let at 25 per cent. less than if let in lots separately.

BUILDING LAND, ISLEWORTH.—TO BE LET, on BUILDING LEASES, for ninety-nine years, TEN ACRES of LAND, very eligibly situate for the erection of first-class villa residences, have lately been planted and laid out from London to Twickenham, and the Richmond and Windsor Railway, and within ten minutes' walk of the Isleworth and Brentford Stations on the loop line of the South Western Railway. For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth.

RICHMOND.—ST. MARGARET'S, on the Banks of the Thames, opposite Asgill's-hill. This most desirably situated Estate is leased by Messrs. Gunning and Ireland, erected by Messrs. Cubitt for a nobleman, TO BE SOLD, with such a quantity of land as may suit a purchaser. To be viewed by cards only. Apply to Messrs. HUMPHREYS and LEWIS, No. 15, New Broad-court, Lincoln's-inn, or GEORGE MORGAN, Esq. Architect, 9, Chancery-lane.

BRIGHTON.—A most eligible SITE for TWELVE HOUSES, part of a build ground, TO BE LET on building leases, at a moderate ground-rent. Two chests of the actual size to be viewed on the ground. Apply at the Offices of GEORGE MORGAN, Esq., Chancery-lane.

BROCKLEY-HILL PARK ESTATE, FOREST-HILL.—TO BE LET, on Building Lease, or SOLD, a very eligible lots of BUILDING LAND, commanding a most extensive prospect, and has direct access from the Crystal Palace. A site has been appropriated for a church in the centre of the hill, in the centre of a proposed square, and other good sites of large extent. The roads, gardens, and sewers to be laid out first. Advances will be made to responsible parties.—Apply to GEORGE MORGAN, Esq. Architect, 9, Chancery-lane.

TO BE LET, extensive PREMISES in BERMONDSEY, consisting of a large Yard, Dwelling-house, Offices, Sheds, &c. the whole covering nearly half an acre of ground, and with a short distance of London-bridge, well adapted for timber yard or manufactory, where great space is required. Apply to ROBERT WARD, Timber Auctioneer, 8, Oxford-street.

BUILDING LAND TO LET, at very low ground-rents for ninety-nine years, close to Regent's-park, and on the East of Primrose-hill, a few minutes' walk from the city station,—for third-rate eight-roomed houses, for which there is a good demand in that locality, and a good road level for car and fly drives; some frontages suitable for shops and others for private houses, also some with great depth behind, where work done or public establishments might be erected.—For plans and particulars apply to F. ELLIOTT, 9, Hastings-buildings.

ISLINGTON, SHOREDITCH PARISH, DALSTON DISTRICT, and TURNHAM-GREEN.—FREEHOLD BUILDING GROUND TO LET; terms, Islington and Turnham-green, 30*l.* years.—Apply to view to Mr. GREEN, Grove-road, Upper Holloway; HARRIS, opposite Lee Arms, Brownlow-road, Queen's-road, Dalston; Jenkins's Distillery, Barrow; PHILLIPS'S Coach-house, near Adam-and-Eve, High-road, Turnham-green; or Mr D. COLLIS, 17, Gresham-street. N.B. Populated localities; roads and sewers made.

FREEHOLD BUILDING LAND at TWICKENHAM.—8 acres, a short distance from the Church and Railway Station, with 1,600 feet frontage to Kingston New-road, and with private roads to the river Thames and rear of the land, of which the land is compassionate new to be erected, and will be LET or SOLD in parcels, to suit their requirements of purchasers. Apply, for plan of the property and further particulars, to JAMES CLARK, 24, Bilter-street, London. N.B. About three acres of the ground consist of a pond, five well-stocked walled garden, with a large range of substantial forcing houses.

ON THE COAST of HAMPSHIRE.—TO BE LET on BUILDING LEASES, LAND on the shores of the Solent, opposite Cowes and Osborne, commanding unintercepted views of the Channel from Spithead to the New Docks. Excellent harbour for yachts and good landing-place for goods. The site forms part of the sea cliff of Lepe, in the Lymington district, and in the parish of Pawley.—Apply to Mr WM. ROSS, Steward of the Estate, the Grange, Alresford, Hants.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO LET, on this desirable locality, commanding extensive views. Those desirous of securing a site for the erection of villa residences, thus affording an excellent opportunity, Bricks may be had cheaper than any of the kind in the market per thousand. For particulars apply to Mr C. HAMBRIDGE, Architect, 73, Coleman-street, City.

ST. BARTHOLOMEW'S HOSPITAL.—A Committee of Governors will be held at the Hospital, on TUESDAY, the 14th day of APRIL next, at SEVEN o'clock in the afternoon precisely, to receive PROPOSALS from such persons as may be willing to accept a Building Lease, for the term of sixty-one years from Michaelmas next, of a very eligible PLOT of GROUND situate in West-street, Smithfield, part in Bell-street, being the site of the house No. 7, West-street, and premises fronting to Bell-street, numbered 14, 15, and 16. Also to receive proposals from such persons as may be willing to take on a Repairing Lease, for a term of twenty-one years, a House and Premises situate and being No. 8, St. John's-lane, West-side thereof. A plan of the ground may be seen, and further particulars ascertained, on application at the Counting-house of the Hospital, any day between the hours of TEN and FIVE o'clock, or at Mr. HARDWICK'S Offices, Henrietta-street, Cavendish-square.

March 31, 1854. WILLIAM WIX, Clerk.

IMPROVED PATENT ROUGH PLATE, PLAIN, FLUTED, AND IN QUARRY PATTERNS.

BRITISH PLATE, PATENT PLATE, SHEET, CROWN, AND COLOURED WINDOW GLASS. PURE WHITE SHADES FOR ORNAMENTS.

Pumps, Water-closets, and Plumbers' Brass Work. Genuine White Lead, Paint, Colours, Varnishes, Brushes, &c.
Tariffs of the above on application to

T. MILLINGTON, 87, Bishopsgate-street Without, London.

BUILDING GROUND in the City, between New Cannon-street and Thames-street.—TO LET, for a term of eight, four years, by the Worshipful Company of Ironmongers, TWO PLOTS of GROUND on Bread-street-hill on the west side, a plot 100 feet 6 inches deep, with a frontage of 62 feet; and on the east side, a plot of ground with a frontage of 40 feet and a depth of 60 feet, extending to Hargrin-lane. The situation is adapted for warehouses of a first-class character, as they can be well lighted.—Tenders to be sent, on or before the 26th APRIL next, addressed to the Clerk, Ironmongers' Hall, Fenchurch-street, where further particulars may be obtained.

CRYSTAL PALACE.—A PLOT of GROUND, fronting Gipsy-hill, and within 400 yards of the Palace, having a depth of 60 feet, with a frontage of 100 feet, may be had for the ERECTION of not more than FIVE HOUSES with shops, of the value of from 500*l.* to 600*l.* each. Notes can be advanced.—Apply to WILLIAM EDWARD, 56, Great Carter-lane, St. Paul's, or HORACE JONES, Surveyor, Finsbury-pavement.

FREEHOLD BUILDING LAND.—TO BE LET, for 99 Years, about FIVE ACRES of LAND, comprising a detached house and 6s. 8d. per rod frontage to the main road near Plumstead common, as table for small houses, which are in great demand; also, several acres adjoining the common, containing brick earth; also plots on Shooter's-hill.—Apply to Mr. JOHN COLLIER, Surveyor, 7, Clement's-lane, City.

DOVER.—FREEHOLD BUILDING LAND.—For SALE, by PRIVATE CONTRACT, a PLOT of FREEHOLD BUILDING LAND, containing nearly Seven Acres, the whole applicable for building purposes, and situated within five minutes' walk of the sea. It lies on a gentle slope facing the south west, and commands an uninterrupted view of the Straits of Dover and the opposite coast of France, and possesses landward a diversified scene of hill and dale, while in the rear it is protected from the north and east winds by the noble and far-famed castle. The advantages of the position of this land as a site for the erection of first-class houses of limited extent in Dover are unrivalled, and offer a rare opportunity to the architect or capitalist.—For particulars, and to treat for the purchase, apply to Mr. JAMES WORSFOLD, Estate and Land Agent, Dover.

EAST HAM BUILDING LAND.—TO BE LET on building leases, several eligible LOTS OF LAND, close to the Ruggessun, and near the Forest-gate station, immediately abutting on the Great Eastern, Tilbury, and Scotland Railway, and on the high road to London. The lots will have a frontage of 50 feet, with depths of equal to feet, and are well adapted for the erection of houses of from 25*l.* to 45*l.* a-year. Money advanced on security of the buildings erected, on the certificate of the surveyor.—For particulars, apply to Messrs. GEORGE NICHOLSON and SON, 4, Old Palace-yard, Westminster; or to THOMAS SMITH, Esq. 14, Hart-street, Bloomsbury.

WHARF in the City Basin TO BE LET, with 90 feet frontage and 40 feet depth, including a string-room and other conveniences. The whole well-in-closed and covered with a slate roof, with abundance of light.—Apply to Mr. SILVERTON, Bridge-house, Wetwood, Cottrell.

TO BUILDERS, MASONS, &c.

TO BE SOLD, a most eligible piece of FREEHOLD LAND, with a frontage to the London-road of 200 feet, by a depth of 150 feet, adjoining the railway station at Enfield Town, Middlesex; with buildings thereon, lately used as a mason's shop, yard, and premises, for which, or for a general builder, it is eligibly well adapted, offering an excellent opportunity to a tradesman to commence business. Rent moderate. For particulars apply to W. S. FRANCIS, Surveyor, 44, Wellington-square, East London; or Mr. THOS. SEARLE, Stone Merchant, Portland Wharf, 24 Wapping-wall.

TO CAPITALISTS, BUILDERS, BRICKMAKERS, AND OTHERS.

AN ESTATE TO BE SOLD, expensively laid out for Building Purposes, in a Fashionable situation near the sea, on which have been erected upwards of 100 Houses, making Pottery, Tiles, Gutta Percha, &c. for a superior description. The Estate yields an Ample Supply of Clay and is capable of being much more extensively worked. Arrangements might be made for the removal or treatment of the greater part of the Clay by instalments, to responsible Contractors only will be treated with. Letters addressed to Mr. WILLIS, Stationer, S. Newgate-street.

MILITARY CAMP.—FREEHOLD LAND for SALE in plots of from one to two acres each. Price at present only 3*l.* per acre. Extensive range of open country and excellent water. Nine miles from the Bank, and within twenty minutes' ride of London by rail. Coloured plans of the property can be had, with books, the latter at 2*s.* 6*d.* each, containing many splendid building sites.—Address to WEAVER 150, Strand.

TO BUILDERS AND OTHERS.

WANTED, PREMISES in a good situation, in the suburbs of London, suitable for a Builder; or any one having a business to dispose of may hear of a purchaser by applying (by letter to) P. W. H. No. 110, Leadenhall-street, City.

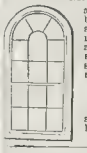
CRANBOURNE-STREET, No. 14, with Nos. 2, and 3, Cranbourne-passage, also Nos. 56 and 57, GREEK-STREET, TO BE LET on repairing or rebuilding LEASES. For particulars apply to Messrs. GEORGE NICHOLSON and SON, 4, Old Palace-yard; or to THOMAS SMITH, Esq. 14, Hart-street, Bloomsbury.

A CRANE WANTED.—A small iron CRANE to fix on a Wharf, capable of lifting 30 cwt. WANTED. Apply to the Secretary of the Frames Flat Glass Company, Strood-wharf, Strand.

JAMES RHODES,
No. 6, MACCLESFIELD-STREET NORTH, CITY-ROAD, LONDON
MANUFACTURER OF SASHES AND FRAMES, DOORS, &c. AND EVERY DESCRIPTION OF HOUSE JOINERY.
Glazed goods securely packed for the country. Prices on application at the Counting-house, as above.

CHARLES WM. WATERLOW AND CO.
MANUFACTURING JOINERS,
121, BUNHILL-ROW, FINSBURY, AND BOW, MIDDLESEX.

N.B.—ORDERS RECEIVED AT THE COUNTING-HOUSE, 121, BUNHILL-ROW, ONLY.



SANDS AND EMERY,
CURSITOR-STREET, CHANCERY-LANE.

MANUFACTURED JOINERS' WORK AND MOULDINGS OF EVERY DESCRIPTION ON THE SHORTEST NOTICE, AND AT THE LOWEST PRICES, PACKED AND FORWARDED TO ALL PARTS OF THE COUNTRY.

Lists of Prices and Estimates forwarded on application.

HENRY PASK (late Johnson and Pask), BAKER-STREET, Clerkenwell, Sash, Shop Front, and Door Maker to the Trade, begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

FARMER and CO. Sash, Door, and Staircase Manufacturers.—Counting-house Fittings, Shop and Public-house Fronts on the shortest notice. Estimates given for contracts of any description. By enclosing a postage stamp, a list of prices will be returned for any kind of work.—Nos. 4 & 5, St. John's-street-road, and No. 1, Edward-street, Penton-street, Pentonville.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOXELL, Patentee, 96, Regent-street, and at his Steam works, 1, 2, 3, 4, 5, Hill-street, Finsbury, have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments where some are fixed measuring upwards of 200 feet in one length, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 456, Oxford-street, adjoining Hanover-square and 18, Queen-street, Seven Dials, London (from the full wing PRICES of WINDOW BLINDS, which have been recommended as being made in a reliable manner. Venetian blinds, per 80 inches of actual area, holland blinds, on rollers, 6*d.*; best ditto, on spring rollers, 9*d.*; gauze wire blinds, 1*s.*; mahogany frames, 2*s.* perforated zinc blinds, 1*s.* 6*d.*; mahogany frames, 2*s.* 6*d.*; striped cloth, 2*s.* Transparent blinds for arches, ready. Lurnings, with prices and directions to builder and the trade, forwarded on receipt of stamped post free.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE GLASS WAREHOUSE,
26, SOHO-SQUARE.
ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

ANCIENT STAINED GLASS.—The Public are invited to inspect a very valuable COLLECTION of HISTORICAL STAINED GLASS, now on view and for immediate SALE, at No. 296, OXFORD-STREET, near Bond-street, opposite the Stratford Clock, the purity of style and superior painting of which renders it worthy of the notice of owners of baronial mansions and halls.

MATTED GLASS.—The Advertiser is now adopting certain improvements in the manufacture of Ornamented Window-glass, and will arrange with any house having a constant demand, to supply selected patterns, prepared to order, thus avoiding the waste and obviating the defects of cutting squares out of sheets.—Address, D. D. Office of The Builder.

MOORE'S PATENT MOVABLE GLASS VENTILATOR, for Windows, Partitions, Factories, Workshops, Warehouses, Greenhouses, Cottages, Stables, Granaries, and other Buildings, Railway and Private Carriages, &c. For Farms, Dairies, Outbuildings, &c. the Ventilator can be made to form a complete window, iron frames and rough plate glass, &c. Ventilators made to any size, and to most forms of sashes; also for sky or fan lights, and other purposes. A considerable saving in additional safety by using fixed window sashes.

MOORE'S PATENT LEVER VENTILATOR, forming a regular current of air, is calculated to effect all that is required for proper ventilation and regard to health. The vitiated air is emitted at the opening left for that purpose. To shopkeepers they are particularly recommended as from their capabilities of removing the foul air caused by gas lights in the shop and windows, they effectually preserve the stock in good condition, and prevent explosions. Tins.

Church and House Clock-makers to the Hon. Board of Ordnance, the Russian Government, and the Emperor of China.

Manufactory, Sekford-works, St. James's-walk, Clerkenwell, London.

GOOD 3rds 16 oz. FOREIGN GLASS, in cases of 200 feet each, average size, 40 by 30, at 42*s.* per case; 4th ditto, 34*s.* Also 16 oz. ground do. do. 48 per foot; Crown and 16 oz. Sheet squares, in 50 feet boxes, varying from 14 by 10 inwards 2½ per foot; 4 inch rough Plate Tiles, 15*s.* per dozen. Also Lenses and sheets ditto in crates, British and Patent Plate, Fluted and Stained Colour Glass Sashes, &c. Sheet Lead, Pipe, White Lead, dry Turpentine, Colours, &c.—G. FARMILOE and SON, 118, St. John's-road, West Smithfield, London.

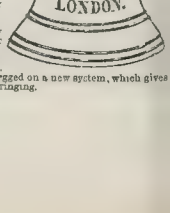
E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SELECT, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—Applications for estimates and lists of prices to be made at their warehouse, 45, OXFORD-STREET.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell-casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, at less cost than has hitherto been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any place, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for hanging. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers and pegged on a new system, which gives a superior tone and facility for ringing.

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established, has been adopted EXTERNALLY and INTERNALLY as one of the largest Hospitals and Asylums, and is acknowledged to be the most useful Coloring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT. This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages shall be as far as possible increased, as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, and when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough surfaces; its durability, comparative cheapness (two coats being equal to three of least paint, that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.

MANUFACTURERS,

PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, obviously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks first. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated as to imitations of their Paint. These manufacturers, obtaining frequently pernicious ingredients, are careful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse and dull appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That competition be not practised, therefore, it is hoped that the cash is marked with the name of the only and manufacturer, thus—

HUBBUCK—LONDON—PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper Road, Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNES ZINC OXIDES, dry or ground in oil are sold with the VM mark in Full, by Messrs BLUNDELL, SPENCE, and CO.; when ground and dry by Messrs. B. MORLEY and CO., and by the Company's Grinding Agents in London, Messrs CHARLES DEVAUX and CO., wholesale agents, 62, King William-street City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court-road, and Upper Thames-street, City. In Manchester and Liverpool by Messrs LAWFORD and CO., of 48, Norfolk-street, Liverpool, who also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. Leith, by Messrs. R. ANDERSON and CO. Timber Bush. Dry COLOURS and PAINTS, in kegs of 14, 21, and 28 lbs., and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Dublin, and the Isles of Jersey, Guernsey, Man, and Wight; also in Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Queen-street, Lincoln's-inn-fields, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one eighth the cost of paint. It will not decompose or wash off. For country mansions, it will give the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 45s. and 2l. each, cask included.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint; is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 16s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 8s. Permanent Brilliant Black, for all kinds of outside work, 10s. per cask; quite, &c. 2s. 6d. each.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

LAMP WALLS PATENT ELASTIC PAINT, an oil coal ready, by which they are rendered fit for papering or finishing in 48 hours. Price 10s. per gallon, which will cover about 100 square feet.

The PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Weldington-street, Gaswell-street, London.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing that article, begs to inform the Trade in general that they are now supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Parliament, Blackfriars, or Middle Wharf, Pollard yard, Westminster. Manufacturer of Roman, Lias, and Plastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious properties, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; and when subject with its eminent hydraulic properties stamp it at once as the first cement. For the duty for work where all the above qualities are required. It is manufactured on the only principle that Cement can be and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade

---

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known and successful articles are supplied upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes. Cement is applicable, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne, or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian, Cinder-cement, and all other Cements in use for building purposes. Nine Elms, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for building in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

BLUE LIAS LIME.—QUARRY TO BE LET. Land to be let for the purpose of raising Blue Lias Lime of superior quality. The natural hydraulic properties of this kind of lime, and the great estimation in which it is held for the construction of buildings in wet or damp situations, are sufficient recommendations for its adoption in all such works as wharf walls, docks, &c. and also for concrete foundations. It is also peculiarly adapted for stucco. The Blue Lias limestone is on the Bishop's Itchington Estate, near Southam, Warwickshire. The Oxford and Birmingham Railway passes through the Estate, and the Blue Lias Limestone is close to the railway. Apply by letter to T. A. J. care of Mr. Ridgway, 169, Piccadilly, London.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

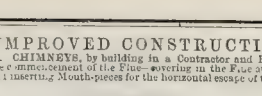
CHARLES RICHARDSON, 6, South Wharf, Paddington.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White Shorts, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

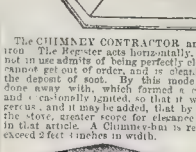
ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cement with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing. Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.



VENTILATION.—PURE AIR.



With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is close for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, and Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

IMPROVED CONSTRUCTION of CHIMNEYS, by building in a Contractor and Register at the commencement of the Flue—covering in the Flue at the top—and inserting Mouth-pieces for the horizontal escape of the smoke.

The CHIMNEY CONTRACTOR and REGISTER is made of iron. The Register acts horizontally, and when the Chimney is not in use admits of being perfectly closed. It is of easy action, cannot get out of order, and is cleanly, as there is no space for the deposit of soot. By this mode the Register of Stoves is done away with, which formed a complete harbour for soot, and occasionally ignited, so that it was not only hurtful, but dangerous; and it may be added, that by detaching the register from the stove, greater scope for clearance and design will be given in that article. A Chimney-board is required where the openings exceed 2 feet 6 inches in width.

The HORIZONTAL MOUTH-PIECES for the escape of smoke stand out before the external surface, are so formed as to divert the wind, and prevent down draught. The covering in the flues at the top abolishes the chimney pot, keeps the flue dry, and preserves the stove from injury.

Contractor and Register, each, 15s.

Mouth pieces, per pair, 6s.

To be had of the Manufacturers.

Messrs. PARRY & SON, 105, Golden-lane, St. Luke's.

MOULDED BRICKS, with perfect Gatherers, for Circular flues, 16 inches in diameter, to bond in with the general Brick work. No cutting or pargetting required.

To be had of Mr. POCOCK, Battersea.

PHŒNIX FIRE ASSURANCE COMPANY, LOMBARD-STREET & CHARING-CROSS, LONDON, established in 1782.

HEAL and SON, 196, Tottenham court road.

ROYAL INSTITUTE of BRITISH ARCHITECTS, incorporated 7th William IV. 1837, 9, Conduit street, Hanover square, London.

At the Special General Meeting, held on MONDAY, 27th of FEBRUARY, 1854,

The following recommendation of the Council with reference to the ROYAL MEDAL for the present year, was read and agreed to:

"Her Majesty having been pleased to grant her gracious permission for the Royal Medal to be conferred on such distinguished artist, or man of science, of any country, as may have made it their study to promote or facilitate the knowledge of architecture, or the various branches of science connected therewith.

"The Council have proposed, on JANUARY 30th, to the Institution for consideration, a person distinguished in each of these departments."

The Council have also proposed, by suitable illustrations,

"1. Each essay to be written in a clear and distinct hand, on a tinted paper.

SOANE MEDALLION

That the Soane Medallion be awarded for the best design for any of the following subjects:—

A large Metropolitan Hotel in a fashionable quarter, calculated for the reception of foreign princes and their suites, of the families of the nobility, and of private individuals in correspondence. It is to contain a grand entrance, ascending staircase, reception-rooms, &c., with the requisite private apartments, and other accommodation on the ground floor, and sleeping apartments, with bath-rooms, &c., above. The site has a frontage of 250 feet by 150 feet, occupying the corner of two streets, and having a central court. The necessary stable offices to be adjacent, but independent.

The plans, sections, and elevations are to be drawn to the scale of 1/8 of an inch to a foot. Perspective views, and such other accessories as the author may think necessary to explain his design, will be allowed to accompany the drawings.

The successful competitor, or the gold and silver medallists after him, in the order in which their merits may be decided, may be admitted to the Travelling Studentship of 120l. for one year, to be awarded on the 30th of November next, as hereinafter mentioned.

A Building to contain Six Courts of Law, with a large Central Hall of communication, and the necessary accommodation for Judges, counsel, officers of the courts, and the public, in the centre of the Lincoln's-inn fields.

The plans, sections, and elevations of this building to be drawn to the scale of 1/8 of an inch to a foot. Perspective views, and such other accessories as the author may think necessary to explain his design, will be allowed to accompany the drawings.

The successful competitor, or the gold and silver medallists after him, in the order in which their merits may be decided, may be admitted to the Travelling Studentship of 120l. for one year, to be awarded on the 30th of November next, as hereinafter mentioned.

N.B. The competition for the Soane Medallion is open to all members of the Institution under the age of thirty years.

DISTINCTIONS AWARDED IN

Each essay and set of drawings is to be distinguished by a mark or motto, and to be accompanied by a sealed letter, enclosing the name of the author, and having on the cover the same mark or motto as that which is affixed to the essay or drawings, with an address to which a communication may be sent. The letter, in the case of the Royal Gold Medallist, or Soane Medallist, Architects, and Associates of the Institute, or Members of the Royal Institution, or Members of the Royal Academy, will not be opened. In the case of any other candidate, it will be opened by the Secretary, and the name and address of the author recorded in a book to be kept for that purpose.

The Institute will not consider themselves called upon to adjudge a premium, unless the essays or drawings shall be of sufficient merit to deserve the distinction; and if the drawings or essays sent in for competition for any of the premiums offered on a former occasion, they reserve to themselves the power of adjudging the medals offered to the second in merit. The essays to which the premiums are awarded, together with the successful drawings, will be published within six months after the award of the medals, the author himself being at liberty to publish them. The drawings will be returned to the candidates, on application, after the successful ones, after the adjudication, and to the successful ones after the presentation of the medals.

Copies of this resolution, and further information, may be had on application to the Secretary, by letter or personally.

FAMILY COLONIZATION LOAN SOCIETY (Originated by Mrs. Chisholm), 29, Buckingham-street, Strand.—The Committee of this Society, having received the report of the Surveyor-General of Emigration to that Colony, the Committee give notice that they are prepared to receive APPLICATIONS from parties desirous of EMIGRATING to NEW SOUTH WALES, and will be glad to meet the wishes of parties who may be desirous of availing themselves of the passage to that country. Further particulars may be obtained on application to SAMUEL GURNEY, Secretary.

TO ARCHITECTS, BUILDERS, AND CONTRACTORS.

THOMAS PRENTICE and CO. being desirous of more extensive orders to lay down the IMPROVED ASPHALTE FLOORS, will make a satisfactory discount to any one giving orders for quantity.—Address, Stowmarket.

No. 1. Floors laid ½ inch thick, 1s per yard.
No. 2. Ditto 1 inch thick, 1s 3d. "
No. 3. Ditto 1½ inch thick, 1s 6d. "
No. 4. Ditto 2 inch thick, 2s 6d. "

Employers to find coal for engines, &c.

FOOTPATHS.—The CROYDON LOCAL BOARD of HEALTH are anxious that they may be desirous of receiving SPECIMENS of ASPHALTE or GAS TAR CONCRETE for FOOTPATHS, and parties are invited to the execution of such works may have an opportunity of laying down specimens. The expense, full and complete, for approval, will be borne by the Board. All tenders must be signed by the applicant, and sent to the Surveyor on or before FOUR o'clock on TUESDAY, the 4th of APRIL next.—By order of the Board,

Croydon, March 23rd, 1854. THOMAS S. WYKES, Clerk.

ASPHALTE.—GERVASE FOOTTIT and Co., Original Asphalte Works, Rotherhithe, established 1838, Inventors and Patentees (with the above dates) of the materials and mode of Asphalte Covering for Railway Arches, 3s per foot; Impalte of Principal Asphalte Roofing and Flooring Depôt, Devon Haytor Wharf, Rotherhithe. G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Footways, Malthouses, Corn Stores, Floors, Warehouses, and every description of Pavement laid down at the above price, and delivered in any part of London, by JOHN PIRTON, PORTLAND-STONE MERCHANT, PAVIOR, &c., OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET HILL. Cellarage for Sale and Private Roads contracted for, supplied with the best Bitumen for covering Bridges and Arches.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GOSSET, WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, at HALF PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large Consumers will find it to their advantage to call at this establishment.

PAPER-HANGINGS.—JEFFREY and ALLEN and CO. Paper Stainers, beg to call the attention of the trade to their present Assortment of the present season, which comprises every description of Style and Quality, from the most elaborate decoration to the plainest paper that can be produced, all of which they are prepared to offer at very low prices. J. A. and Co. also respectfully inform the trade that they have OPENED a WAREHOUSE at No. 7, CORK-STREET, Bond-street, where goods can be obtained on the same terms as at the Factory.

GUT-A-PERCHA PAPER FOR DAMP WALLS. J. A. and Co. are the sole vendors of this well-known remedy for Damp Walls.

1, 3, 5, White-chapel, near the Obelisk, and 360, Oxford-street.

EAST-INDIAN RAILWAY COMPANY.—INSPECTORS OF PERMANENT WAY, PLATELAYERS, &c.—The Board of Directors are prepared to receive applications from persons in the employment of RAILWAY COMPANIES, in the capacity of INSPECTORS of PERMANENT WAY, PLATELAYERS, &c., desirous of entering the service of this Company, when application may be made at the Offices of the Company, No. 30, Old Broad-street, City.

By Order of the Board,
J. NOAD, Secretary.

THE PERMANENT WAY COMPANY.—The Directors and Railway Directors and Managers of the PERMANENT WAY, SLEEPERS, FISH JOINTS, and Chairs, have much pleasure in announcing that they have now upwards of 2,000 miles under contract, and have also received orders for upwards of 2,000 miles more.

Extract from the half-yearly report of the Directors of the Midland Railway Company:—

"An important feature in the plant for the maintenance of the Permanent Way, is that the contractors are bound to repair their engines, wherever the Company may require, at the Company's workshops, at a certain moderate charge, which is to cover the cost of labour and materials only."

Every information may be obtained on application to Mr. CHARLES MAY, the Manager; or Mr. WILLIAM HOWDEN, the Secretary, 20, Great George street, Westminster.

TERRA COTTA.—Vases, Figures, Capitals, Consoles of Arms, Friezes, Consoles, Chimney Shafts, Flowers for Gardens, &c., manufactured by MINTON HALL and WARD, Stoke-upon-Trent, and sold at No. 1, Pratt-street, Edgware road, Paddington.

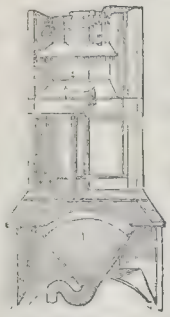
SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hoppers and other Pans, with best White Glaze inside.



Syphon Pan with or without STEPHEN GREEN'S Patent Air-tight Valve

Registered Flushing Basin, the most effective Syphon trap yet offered to the public.

STEPHEN GREEN'S IMPERIAL POTTERIES, LAMBETH.

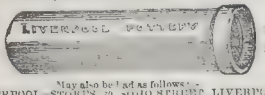
IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

Gentlemen, Several of the Patent Syphon Flushing Basins which you have put down in the Colleges, I have much pleasure in stating my testimony as to their efficiency and simplicity.

HENRY UNDERWOOD, Architect
R. S. HODGES, Esq. Rector.

Royal Arsenal, Woolwich, June 24, 1850.



Gentlemen, I have much pleasure in stating my best testimony in favour of your Patent Syphon Flushing Basin, which I fixed at Mount Clematis, and also several houses which have been under my charge, with the greatest satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete, and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

STAFFORDSHIRE POTTERY.—WILCOX, BARNARD, and CO. Earthenware Manufacturers, Mill Wall, Poplar—Closet-basins, urinals, bidet pans, plunge-pans, washhand-basins, beer-machine handles, closet-handles, brass-knobs, &c. toilet ware, fancy jugs, flowerpots, &c. white, printed, and decorated, delivered carriage-free to wholesale dealers within five miles of London.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES &c.

A DESIDERATUM in SLUICE-VALVES. FREEMAN ROE'S Patent Sluice-valve, can be repaired with a Bonnet removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, Fire and other Pumps, Hot water Apparatus, Baths, &c. Surveys made, and testimonials given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

VICTORIA POTTERY, LEIGH,
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Right Honourable the Secretary of State), Bends, Traps, Closet-pans, Bath, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris, same hard Lodge, Rickwall Order, separated from the above places, from Faversham wharf, 70, Bankside, Blackfriars, and from Hare-marbridge Wharf, Stratford, Essex.

TO WATER COMPANIES AND PLUMBERS.

DEVEY and DALE'S CYLINDER BALL-VALVE and BALL, Registered Oct 23, 1854. No. 1526.

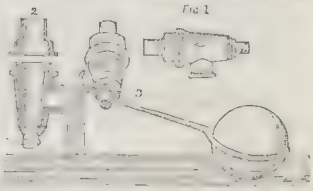

Fig 1 represents the Cylinder Ball valve in elevation. Fig 2 is a section of the Ball in 2, showing the internal construction. The Ball B, shown detached under B, Fig 1 in section.

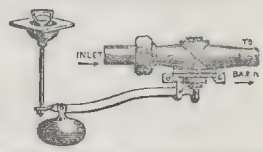
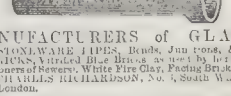
This Valve is peculiarly suited to High pressure. The greater the weight of fluid, the more secure the Valve becomes, and the more effectually prevents waste. Manufactured solely by DEVEY and DALE, 5 and 9, Shoe-lane, and may be had of respectable Plumbers.

GREAT SIMPLIFICATION and Economy in FIXING CLOSETS.



By the use of Underhay's Patent Regulators, the separate cistern, service-box, valve, cranks, and wires are dispensed with, making a closet as simple to fix as a bib-cock, and yet ensuring a perfect flush of water.

The Manufacturers, CHARLES BOTTEN and SON, solicit a call from all parties interested, they having Pan, Valve, Self-acting, and Double Closets fitted with this apparatus, and fixed for inspection, or will forward drawings of the same.



CHARLES BOTTEN and SON, Brass Founders, Engineers, Gas Meter and Fitting Manufacturers, Crawford passage, Clerkenwell.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 150 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Paving Bricks, &c., &c. Agents, CHARLES RICHARDSON, No. 4, South Wharf, Paddington, London.

VATS.—WANTED, Four VATS, 10 feet diameter by 12 or 14 feet deep.—Address, price, &c. to P. Q. care of Mr Samuel Dobson, Agent, Bond-court, Walbrook.

HAWKIN'S Patent Metal, Capped, and Bristled Painting and Artist Brushes—Manufactory, 14, College-hill, Cannon-street, London.

SALES BY AUCTION.

LITTLE TOWER STREET Valuable Freehold Property in the City of London.

MESSRS. NORTON, HOGGART, and TRIST have received instructions from the Executors to offer for SALE by AUCTION, at the MART, on FRIDAY, APRIL 7, at TWELVE, a valuable FREEHOLD PROPERTY, consisting of a most desirable Private Residence, with extensive Warehouses, Counting-house, Stabling, Coach-house, and other conveniences, occupying a most eligible situation, in LITTLE TOWER-STREET, comprising about 4,000 superficial feet of space, and with a frontage of 60 feet to the north side of that thoroughfare, and with a depth of 100 feet to the rear of the premises. From its close contiguity to the City and commercial docks this property presents a most desirable opportunity for the investment of capital, as, from such a position, it must ever be in request, and command a high rental. Further particulars may be had of Messrs. Bell and Ellis, Solicitors, 4, Bartholomew-close; at the Mart; and of Messrs. Norton, Hoggart, and Trist, 13, Old Broad-street, Royal Exchange.

NORTH WOOLWICH Vote for the county of Essex.

JOHN T. FISHER is instructed to SELL by PUBLIC AUCTION, at the BELL and ANCHOR TAVERN, North Woolwich-road, on THURSDAY, APRIL 6, at HALF-PAST TWO o'clock precisely, an ACRE of FREEHOLD BUILDING GROUND, Land-tax redeemed, Fifty Feet Rows of Ash Timber, most desirably situate for immediate Building Purposes. Woolwich Brick Field Estate, Bottom Road, the most eligible part for Building North Woolwich, and adjacent to the Eastern Rive Entrance of the New Victoria Dock, which are in course of rapid completion, and have within the coming month, and those about to be commenced along the river frontage, numerous Public Works, so much time by road, water, and railway must greatly increase the present number of workmen employed thereon. Particulars may be had of the Auctioneer, Woolwich; Greyhound, Greenwich; Market Tavern, Borough-market; Lea Arms, Dalston; Blue Boar, Aldgate; White Hart, Bound; Castle the Barking; Bell Head, Tottenham; Abbey Arms, Plaistow; Postal Telegraph Office, Bishopsgate; at Messrs. Prior, Printers, Bow; of Whitgreave Messengers, 3, Parliament-street, Westminster, and of the Auctioneer, Rosely House, Stratford and Poplar.

AT DENHAM, NEAR EYE, SUFFOLK.—TO SHIP-BUILDERS, TIMBER-MERCHANTS, AND OTHERS.

Sale of superior Oak Timber within 6 miles of the Mellis station of the Eastern Union Railway.

MOORE and GARRARD respectfully announce that they are favoured by the trustees appointed by Edward C. Barton, Esq., M.P., to SELL by AUCTION, early in the month of JUNE next, without reserve, the following TIMBER, as it will be felled in the season, about 2,000 trees of clean Oak Timber, from 8 loads to 24 loads each; 6 do. do. from 14 load to 9 loads each; 16 do. do. from 1 load to 14 load each; 23 do. do. from 1 load to 1 load each, together with the Topwood, &c., arising therefrom. Further particulars, with the day of sale, and any requisite assistance in pointing out the timber, may be had of Mr. Edward Hearne and Brundish, Smith, &c.

TO SHIP-BUILDERS, TIMBER MERCHANTS, and OTHERS.

Oak Timber, with Large Limbs, and Bark—Sywell, near Northampton. TO BE SOLD by AUCTION by

MR. DURHAM, on TUESDAY, APRIL 4, at the HOUSE, SHOP, INN, in SYWELL, at ONE o'clock in the afternoon, by direction of George Worley, Esq., upwards of 200 Oak Trees, of first-rate quality, and said to be the finest Timber in the county of Northampton, now standing on his estate at Sywell. For view apply to Messrs. Sturgis and Gale, the agents for the Premises; of Freeman and Son, Northampton; at the Hind Hotel, Wellingborough; or at the Office of Mr. Durham, Lind Vicarage, near Thrapston. Due notice will be given to intending purchasers of the time when the Timber will be marketable.

TO CAPITALISTS.

WESTON-SUPER-MARE, SOMERSET.—TO BE SOLD by AUCTION, in MAY next (unless previously disposed of by private contract, nearly FIVE ACRES of BUILDING LAND, close to and overlooking the sea, and well adapted for the erection of eighty houses, to form a grand square, terrace, or crescent. It is now the only frontage land in the sea-bathing town, and is about in the centre of the town. There are several Shops in front here. A large cottage orné, stables, and carriage-house in front. Also, detached cottages, set at intervals, are on the estate. The pews in two parish churches, and a noble public hall, are situate within a few minutes' walk of the property. The purchase money may remain on the premises, if wished. The owner is so fully convinced of a large and early return by extensive building on this valuable property, that he will willingly agree with a purchaser, if desired, to join in erecting the first 8 houses, on equal proportions of the cost, with the first bakehouse, butcher's shop, and beer-house, amongst himself, and by such arrangement with the town, the most eligible position may be had either for trade or private residence. Further particulars may be had, also at the place of sale; and at Mr. Lee's Offices, 63, Moorgate-street.

SALES BY AUCTION.

Important Sale of Oak Timber, situate in the parishes of Farnborough, Orpington, St. Mary Cray, Saltwood House, Eynsford, Lullingstone, and Shoreham, in the county of Kent.

MR. WILLIAM HODSOLL is instructed by Sir P. H. Dyke, bart., to SELL by AUCTION, at the BULL INN, Dartford, Kent, on FRIDAY, APRIL 7th, at 2 TWO o'clock, TWENTY-FOUR OAK TIMBER TREES, now standing and growing, with lop, top, and bark: 330 ditto, winter felled; 175 capital Elm Trees; 67 Ash ditto; and 585 Oak Pollers. Catalogues may be had at the principal Inns at Greenwich, Bromley, Farnborough, Sevenoaks, Foot's Cray, St. Mary's Cray, Bexley, Farningham, and Rochester, at the place of sale, and of the Auctioneer, 36 North Cray Road.

PLAISTOW, ESSEX

J. T. FISHER is instructed to SELL by AUCTION on the PREMISES, Plaistow-lane, on FRIDAY, APRIL 7, at TWELVE o'clock precisely, the valuable BUILDING MATERIALS of a Villa, comprising sound pan and plain tiles, lead in gutters and flats, stock brickwork, effective marble chimney-pieces, oak and fir timber, in garden, sashes, weather-boarding, 8 inch cast-iron soil-pipes, and frames, fencing, and other items.—May be viewed one day prior to sale, and catalogues obtained at the Black Lion, Plaistow; at Bow Bells Inn, Poplar; the Boar's Head, Aldgate; and of the Auctioneer, Stanley House, Stratford, and Plaistow, Essex. The eligible Freehold Building Land to be sold in Plots, of which due notice will be given.

SEVEN SISTERS-ROAD, and HOLLOWAY ROAD. — Public-house, Carcases, and Building-ground, at a peppercorn rent.

MR. MARSH has received instructions to SELL by AUCTION, at the MART, on THURSDAY, 13th APRIL, at TWELVE, in several lots, a very valuable LEASEHOLD PUBLIC-HOUSE, with Shop adjoining, as the Eagle, most desirably situate at the corner of the Seven Sisters-road and the Hornsey-road, let on lease to Mr. Grunsell, a most responsible tenant, for a term of forty years, less a few days, from Midsummer, 1851, at a rental of 40l. per annum, and held for a term of forty years from Midsummer, 1851, at the nominal ground-rent of 2l. 2s. per annum. Also several very eligible Plots of Building land, adjoining the above, possessing a total frontage of about 460 feet to the Seven Sisters-road, sufficient for the erection of twenty-four houses, held for a term of forty years, less a few days, from Midsummer, 1851, at a peppercorn ground-rent. Also four semi-detached and two terrace Carcases, comprising Nos. 1, 2, and 3, Sackville-terrace, very desirably situate on the same ground at the foot of Highgate-hill, within a few hundred yards of the Archway Tavern, whose letters to omnibus communication in all parts of town; held for a term of ninety-nine years, from Midsummer, 1851, at the low ground-rent of 12l. per annum each per Map to view, and particulars, with conditions of sale, apply at the Mart, the Eagle, Seven Sisters-road, the Archway Tavern, the Hanley Arms, of Walter Joseph, Esq., solicitor, Bernard-street, Russell-square; and at Mr. March's Offices, 2, Chatham-place, Mansion-house.

In Bankruptcy.—Harrow on the Hill.—Valuable Freehold Land, Building Ground, and Rent-charge Redeemable.

MR. MARSH has received instructions to SELL by AUCTION, at the MART, opposite the Bank of England, on THURSDAY next, APRIL 6, at TWELVE, in one lot, FIVE valuable PLOTS of eligible FREEHOLD BUILDING LAND, possessing frontages to excellent roads, and amicably adapted for the erection of 6 cottage residences, being situate in one of the most desirable parts of the select and healthy portion of Harrow, midway between the town and the railway station, and within half an hour's ride of the City.—May be viewed, and particulars obtained, at the Crown and Anchor, Harrow; the principal Inns in the neighbourhood; and at the Mart; of Messrs. Linklaters, Solicitors, Size-lane; and at Mr. March's Offices, in Chatham-place, Mansion-house.

In Bankruptcy.—Builder, Ironmongery, Paperhanging, and Miscellaneous Effects.

MR. MARSH has received instructions from the assignees to SELL by AUCTION, at the AUCTION ROOMS, 28, Leadenhall-street, City (to whom it has been removed from Kensington Park-gardens for convenience of sale), on FRIDAY, APRIL 7, at TWELVE o'clock, the STOCK-IN-TRADE of IRONMONGERY, comprising a large assortment of cocks, chasing, and other butt hinges; back flaps; Tower, London, and Lever locks; fan lights; sash fasteners; bells and cranks; japanned tea-trays; tea and coffee urns, with China and other furniture; iron sash bolts, shutter bars, sash fasteners, chimney-bars; about 4 tons of cast-iron rain-water pipes and heads; about 1 ton of copper, tinned, and sheet-iron stoves; fire-irons, marble, and other paperhanging, and miscellaneous effects. May be viewed the day preceding sorting of sale, and catalogues had at the Auction Rooms; of Parsons, Johnson, Egg, Official Assignee, 30, Basinghall-street; of Messrs. Pocock and Poole, Solicitors, 58, Bartholomew-close; and at Mr. March's Offices, 2, Charlotte-row, Mansion-house.

RICHMOND (SURREY).—Valuable Nursery Ground, and a newly-erected and Unfinished Cottage Residence, with possession, nearly equal to Freehold.

MR. MARSH has received instructions to SELL by AUCTION, at the AUCTION MART, on THURSDAY next, APRIL 6, at TWELVE, in two lots valuable COPYHOLD PROPERTY, consisting of a large and productive Nursery Ground, possessing an important frontage to a new carriage-road, an entrance from the Kew Horse-road, Richmond, at present occupied by Mr. Stocker, at the low rental of 20l. per annum. Also, a semi-detached well-built residence, distinguished as "Cedar Cottage," delightfully situate in the Kew Park-road, within a few minutes' walk of the Nursery ground, and the Royal Botanical Gardens at Kew, in the occupation of a most respectable tenant at the low rental of 16l. per annum. May be viewed by permission of the tenants, and particulars with conditions of sale obtained at the Mart, the Cattle and Hounds Head Inn, Kew-bridge; and at Mr. March's Offices, 2, Charlotte-row, Mansion-house.

Freehold Building Land between Norwood and Croydon.—TO BE SOLD by AUCTION,

MR. BARNES, at the MART, on WEDNESDAY, 12th APRIL, at TWELVE o'clock (unless previously disposed of by private contract), THIRTY-FIVE ELIGIBLE PLOTS of BUILDING LAND, with a frontage to a wide road in Selhurst-road,—that beautiful locality and respectable neighbourhood between Norwood Station from which it is distant only half a mile) and Croydon, and equally dry, fine water, handsome residences, and good title. Particulars and plans of Mr. Barnes, 13, Birchin-lane, Lombard-street, and neighbouring inns.

PLANS and SPECIFICATIONS TO BE DISPOSED OF.—A gentleman about to leave for Australia, who has had considerable professional practice in ornamental gardening, is desirous of disposing of his plans and specifications for about three hundred villas, terraces, mansions, parks, &c., which have been executed in most districts of the country. The plans will be disposed of in the lot or separately, and a considerable saving may be effected by a purchaser. Apply to R. S. Mr. Bishop's, News-agent, 1, Ludgate-hill, London.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquee and temporary Awnings on sale or hire. Orders for packing sent to the most prompt attention.—WILLIAM PIGGOTT, 13, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

COMPETITIONS.

CHURCH of ENGLAND HOUSE of MERCY CLEWER—TO BUILDERS AND OTHERS—Notice is hereby given, that PLANS and SPECIFICATIONS for ERECTING certain portions of a Building, to be called the "House of Mercy," at Clewer, near Windsor, in the county of Berks, will be lying at Mr. INGALTON'S Office, Datchet-lane, Windsor, from MONDAY, APRIL 3rd, until SATURDAY, APRIL 15th, inclusive, between the hours of TEN and FOUR. All persons desirous of Contract for the execution of the works are to send in sealed Tenders, directed to the Honorary Secretary, the Hon. and Rev. C. A. HARRIS, 12, Charles-street, Windsor, on or before MONDAY, APRIL 24th. The Building Committee will not bind themselves to accept the lowest or any Tender. The Contractor will have to enter into a proper bond, at his own expense, with two approved sureties, for the due performance of his Contract.

TO ARCHITECTS.

THE BOARD of GUARDIANS of the Parish of PADDINGTON are desirous of receiving PLANS and ESTIMATES for EXTENDING the SIZE of the PADDINGTON WORKHOUSE, Harrow-road, to increase the accommodation from 2,300 to 3,000 inmates. The plans, &c. must be sent in on or before the second day of MAY, addressed to the "Board of Guardians, Paddington Workhouse," where a statement of suggestions for the proposed accommodation, and other particulars, may be seen. The plans approved by the Guardians will be subject to the approval of the Poor-law Board, and the Architect whose plan shall be approved shall be employed to superintend the works upon the usual terms—by order of the Board,

CHAS. BROWN, Jun. Clerk.

Paddington Workhouse, Harrow road, March 29, 1854.

TO ARCHITECTS, LANDSCAPE GARDENERS, AND OTHERS

TAUNTON BURIAL GROUND.—Designs and estimates are required for LAYING OUT as a BURIAL GROUND, and PLANTING, HEDGING, and FENCING a FIELD of EIGHT ACRES and a HALF, called Mount-nay Eight Acres, situate on a ridge from Taunton, on the road to Wellington, and for ERECTING thereon TWO CHAPELS, either under one roof or not, and an ENTRANCE-LODGE and TWO ENTRANCE-GATES from the turnpike road. The fence must be an effectual one, of at least 5 feet in height. The designs must be economical in all respects. A plan of the land may be seen at Mr. LEVERIDGE'S, Surveyor, Taunton; but a personal inspection of the site is particularly recommended. The party whose plan is selected will have the superintendence of the works, and will receive the remuneration, on the money actually expended, for his plan and due superintendence. No payments will be made to unsuccessful candidates for their designs. The designs and estimates must be sent in within one month from the date hereof, to Mr. PINCHARD, Solicitor, Clerk to the Burial Board, The Mount, Taunton, of whom any further particulars may be obtained.

Dated April 8th, 1854.

COMPETITIONS.

RHYL, NORTH WALES.—TO ARCHITECTS and BUILDERS.—The Commissioners under the "Rhyl Improvement Act," intending to build a Market-hall, for the disposal of corn, butchers' meat, fish, and provisions in general, and hawkers' goods, are desirous of obtaining a satisfactory PLAN and DESIGN, with SPECIFICATION and ESTIMATE, for the ERECTION of such MARKET-HALL, together with Offices for the use of the Commissioners, and a Lock-up. The building should embrace a well-lighted and ventilated market, with good clock and bell, two rooms for business, one from 35 feet to 50 feet by about 25 feet, fitted up for commissioners' and magistrates' meetings, &c.; and another about 25 feet by 15 feet, fitted up with writing table, bookcase, and cupboards, as an office or retiring-room. A lock-up, with two or three cells, and constable's room; suitable rooms for fire-engine and watercarts, spacious storeroom, with all other necessary conveniences, drains, and approaches, preparations for supplies of gas and water. The total expenditure, including architect's charges, not to exceed 1,200l. The Commissioners offer 10l. for the most approved plan, with specification and estimate, upon its being adopted and carried out within the limited cost. The plans, &c. to be sent to the Chairman of the Commissioners (post free), on or before the 27th APRIL next. Mr JOHN JONES, Clerk to the Commissioners at Rhyl, will show the ground on which the site is to be fixed, and give such further information as may be required. The market-hall to be so formed that it may be extended when necessary.—Rhyl, March 31, 1854.

TO ENGINEERS AND IRONFOUNDERS

AS Battle's Bridge, over the River Crouch, near Rayleigh, Essex, is in a decayed state, the Court of Quarter Sessions may see fit to CONSTRUCT an IRON BRIDGE with an 18 feet roadway in the clear, and 100 feet span, the same height as the present wooden bridge above high water mark. Engineers and ironfounders may deliver plans and estimates for the same to No. 40A, Connaught terrace, Edgware road, directed to the Clerk of the Peace of the county of Essex, on or before the 1st of JUNE next, for the consideration of the Court of Quarter Sessions.

LOUGHBOROUGH TOWNHALL and CORN EXCHANGE.—The Committee are prepared to receive DESIGNS and ESTIMATES for a TOWNHALL and CORN-EXCHANGE, at Loughborough; and they beg to offer a premium of 30l. for the best set of plans, elevations, and specifications; and a further sum of 15l. for the second best. The selected designs to become the sole property of the committee; and the successful competitor will if fully required by the executive sub-committee of the committee, be intrusted with the carrying out of the design at the usual commission, in which case the first-mentioned premium will merge in the commission. The whole cost of the erection is not to exceed 4,500l. The front of the building looking to the Market-place is to be of red bricks, with stone facings or dressings. The building must comprise—1. A corn-exchange, having an area of 40 square yards, and 30 feet high. 2. An assembly and music-room, about 70 feet long, 40 feet wide, and 30 feet high, with two ante or retiring-rooms attached. 3. A room for magisterial and county courts, public lectures, literary meetings, and other purposes of a similar character, having a small retiring-room attached, and containing a superficial area of about 1,300 square feet. This room should be so contrived as to be used occasionally in connection with the assembly-room. 4. A public library and reading-room of moderate size. 5. A news-room, also of moderate size. 6. Hall-keeper's apartments, and such other offices as the building may require. The whole of the building to be heated, and furnish with gas-fittings, and properly ventilated. All the drawings to be on a scale of one-eighth of an inch to a foot, and to be sent under motto only (the signature to be given in an accompanying letter, sealed with the motto), which will not be opened until the selection has been made, to one of the secretaries on or before the 15th day of MAY next. The designs not accepted will be returned.

JOS. INGLESANT, A. HUCKNALL, } Honorary Secretaries.

Loughborough, April 3, 1854.

CONTRACTS.

TO CONTRACTORS.

Royal Engineer's Office, Chatham, April 6 1854.

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 24th day of APRIL, 1854, from Persons desirous of Contracting with the Honourable Board of Ordnance.

For the ERECTION of an additional BARRACK STORE at CHATHAM BARRACKS, and for RENEWING sundry FLOORS and CEILINGS at CHATHAM and BROMPTON BARRACKS.

Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 22nd instant. Sundays excepted.

The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of 200l. for the due performance of the Contract.

Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed, "Tender for Works at Chatham"

No Tender can be admitted after the said 24th day of APRIL, 1854.

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

NOTICE TO BUILDERS.—ORDNANCE WORKS—BULL POINT, near Devonport.—SEALED TENDERS for ERECTING a BASIN, and CONSTRUCTING an EMBANKMENT, will be received at the Ordnance Office, Pall-mall, London, on or before the 22nd day of APRIL, 1854, at noon, addressed "To the Secretary to the Board of Ordnance," and endorsed "Tender for Works at Bull Point."—Detailed plans may be seen, and specifications, forms of Tender, and all other necessary information, obtained at the Royal Engineer Office, Bull Point, between the hours of NINE and FOUR, daily, from the 27th MARCH to the 29th APRIL, 1854, Sundays excepted.

Royal Engineer Office, Devonport, March, 1854.

CONTRACTS.

NATIONAL FREEHOLD LAND SOCIETY.

TRUSTEES.

Richard Cobden, Esq. M.P. — Samuel Morley, Esq.
Charles Gilpin, Esq. — W. A. Wilkinson, Esq. M.P.

SURVEYOR.—James Wylson, Esq.
SECRETARY.—W. F. Whittingham, Esq.

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

HOUSES of various classes and values being required to be built on the following Estates, namely,

BARNET, CAMBRIDGE, COLCHESTER (3), CROYDON GROVE, ENFIELD, GUILDFORD, HADLOW, MINSTER, SUTTON, ROMFORD,

The Directors will be prepared to receive plans and particulars of Houses suitable for the several situations, and Tenders to build the same. Particulars of the lots to be built upon, the classes of Houses required, and the conditions of building, may be had on application to me, personally or by letter, on and after WEDNESDAY, the 5th of APRIL next; and the Designs, &c. are to be sent in on or before WEDNESDAY, the 19th of MAY next.

JAMES WYLSON, Surveyor.

14, Moorgate-street, London, 22nd March, 1854.

TO IRON FENCING CONTRACTORS, SMITHS, AND OTHERS.

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

J. C. Cobbold, esq. M.P.

The Executive Committee are prepared to receive TENDERS for EXECUTING about 27 rods run of IRON HURDLE-FENCING, on the Brockley-hill-park Estate, near the Forest hill Station, on the Brighton Railway. The Conditions and specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN, 5, Chancery-lane, on and after MONDAY, APRIL 10, between the hours of TWELVE and FOUR. Tenders are to be sent on or before TWELVE o'clock, on FRIDAY APRIL 21, addressed to the Surveyor, and endorsed, "Tenders for Fencing, Brockley-hill-park Estate." The Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, Norfolk-street, Strand, April 5, 1854.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the complete RESTORATION and REPAIRING of the PARISH CHURCH of ST. WOOLOS, in Newport, Monmouth, may see the drawings and specifications, and receive full particulars at the office of the Architects, Messrs. W. G. and E. HABERSHON, 38, Bloomsbury-square, London, and 5, Park-place, Newport. Tenders to be delivered at the Vicarage, Newport, on THURSDAY, the 13th of APRIL, 1854, at ELEVEN o'clock precisely. The Architects do not bind themselves to accept the lowest or any of the Tenders.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the BUILDING of a CHURCH at Machen, near Newport, Monmouth, for the Rev. Chancellor Morgan, may see the drawings and specification, and receive full particulars at the Offices of the Architects, Messrs. W. G. and E. HABERSHON, 38, Bloomsbury-square, London, and 5, Park place, Newport. Tenders to be delivered at the Office of the Architects, at Newport, on THURSDAY, the 13th APRIL, 1854, at ONE o'clock precisely. The Architects do not bind themselves to accept the lowest or any of the Tenders.

TO BUILDERS.

PERSONS desirous to CONTRACT for the ERECTION of a GENTLEMAN'S HOUSE, Stables, and Offices, at St. Fagan's, near Cardiff, may see the drawings and specifications, and obtain particulars at the office of the architects, 38, Bloomsbury-square, London; or, 5, Park-place, Newport, Monmouth. Tenders to be delivered on THURSDAY, MAY 4th. The architects do not bind themselves to accept the lowest or any of the Tenders.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of OFFICES for the Conservative Land Society, on a plot of ground lately 7 and 8, Norfolk-street, Strand, may inspect the drawings at the offices of the architect, on and after MONDAY, APRIL 10th, next. The executive committee do not bind themselves to accept the lowest or any Tender. GEORGE MORGAN, Architect, 5, Chancery-lane.

TO CONTRACTORS

THE CORPORATION of NEWCASTLE-UPON-TYNE are desirous of receiving for consideration, TENDERS from parties willing to CONTRACT for the SWEEPING and CLEANSING of all the public streets, lanes, alleys, and footpaths in the borough; also, for emptying all ashpits and receptacles of manure, and carting to depots, to be provided by the contractor, all the sweepings, scrapings, ashes, and other dirt. Such contract to be for a term of not less than three years, to commence from such time as may be agreed upon. Persons tendering for the above work must state the sum they will give for the manure per annum for the said term; or for what per centage they will undertake to dispose of it. A plan of the town and a specification of the work may be seen at the Office of the Town Surveyor, Guildhall, each day from ELEVEN till TWO o'clock. Sealed Tenders, indorsed "Tenders for Cleaning Streets," directed to the Sanitary Committee, will be received at the Town Surveyor's Office, up to TUESDAY, 2nd day of MAY next.

Newcastle-upon-Tyne, March 23, 1854.

[For remainder of Contracts see next page.

CONTRACTS.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and Co. having received the most decided approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles, for rabbit-proof and all other fencing.
The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. It is fence, as fitted by R. S. Newall and Co., after the model of the fences of this material in the Slopes and Home-park, at Windsor, has the present property of remaining equally tight and rigid, under any variations of temperature.
N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.
OFFICES,—Gateshead-on-Tyne.

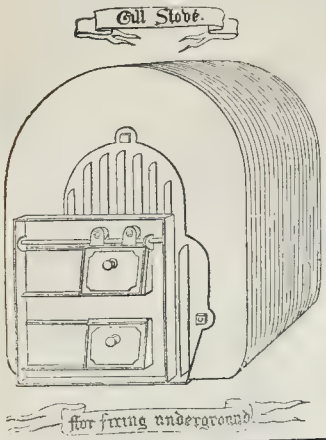
GEORGE HART, 253, STRAND,
Near Temple-bar,
WHOLESALE, MANUFACTURING, AND FURNISHING IRONMONGER.



Proprietor and Manufacturer of Pitt's Patent Self-adjusting spindled Door Furniture.
Lists on application

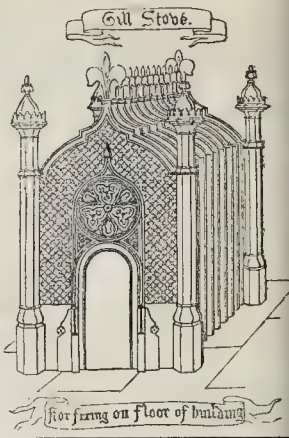
TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY,
PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels made or repaired by this process, making them complete, without the introduction of any foreign metal
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and Co., 63, Bridge-road, Lambeth, where a great variety are always on view for cotton, corn, railway, counting-house, and warehouse doors of large and small dimensions, a rate of speed which no other hinge with these powers can easily be a match. These patent hinges, adapted for drawing-rooms, &c., doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior cast-iron butts. The Trade are respectfully cautioned against spurious imitations, bearing the name of "Collinge," and recommended not to be used. Warranted for hanging and other purposes. Engines, machinery, parcel and lifting screws, sugar-mills, &c.

STUART AND SMITH'S
PATENT GILL STOVE,
FOR
HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester: Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, just completed for two kitchens in the above building. A great variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for three-halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated Dry Gas Meters.—50,000 in use. Testimonials at the Office, 145, Regent-street. Manufactories removed from Hampstead-road and St. Martin's-lane to more extensive premises, New-road, near Albany-street.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boilers, requiring no brickwork; Warm Air Apparatus, &c.—Apply to SPILLER and TAYLER, Engineers, Battersea.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the plan address of the Rev. H. J. Bigge's, delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

PATENT PURE WARM-AIR VENTILATING STOVES.—The only Pedestal Stove which gained a Prize Medal (Class 476) at the Great Exhibition in 1851, especially adapted for warming Churches, Chapels, Schools, and Mansions.—Can be purchased only at the Manufactory, 16, Great Queen-street, Long-acre.

CALORIFERE.—Gold Medal, Paris Exhibition, 1848.—A 300,000 cubic feet room warmed by hot air only, at 55 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green-houses. The Calorifere has been adopted by his Grace the Duke of Bedford at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country. Apply, per post, to T. BOILESVE, French Engineer, 55, King William-street, City.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED. These locks are recommended to the public for their simplicity, durability, and perfect security; also, Parnell's Patent NOISELESS BOX STAPLES and striking Plates, Fire-proof safes, Deed and Cash Boxes, Copying and Lever Presses.—Descriptions and lists of prices may be had at the Depôt, 83, Strand, gratis.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut), Copper and Zinc; Patent Locks of all descriptions; Chips, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

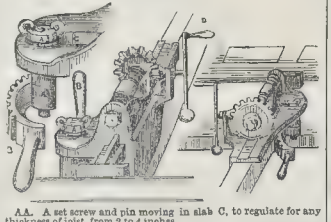
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

NAILS and IRONMONGERY, from BIRMINGHAM direct. Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES, a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

GAS FITTINGS, &c.—TO ARCHITECTS, SURVEYORS, AND BUILDERS.—Messrs. JAMES JONES and CO. 28, 29, and 30, Bow-street, London, are prepared to issue out gasworks and materials for temporary lighting during the erection of buildings at a small per centage on the prime cost. Buildings in carcase fitted up with service and branch supplies for the distribution of gas and water in wrought-iron tubing or otherwise, at the lowest competing prices. Every description of materials supplied at the lowest terms to those who fix their own work. Plain and ornamental brass work, gas fittings and apparatus for cooking, heating, and ventilation in the greatest variety, and on most approved principles. Price-lists sent on application, enclosing postage stamps.

BRASS WORK.—The advantages of direct communication with a bonâ fide Manufacturer are too obvious to need elucidation; to architects, builders, and the trade generally these advantages in their fullest extent are afforded by C. JONES and SON, 36, Monkwell-street, City. TRELLIS and FRETWORK of every pattern and dimension. Rod and rail work for every purpose. The oldest house in London for door and stall-board plates.

AUSTIN'S IMPERIAL
PATENT SASH and BLIND LINE,
can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY



BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEELE and STEDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

HART AND SON,
WHOLESALE IRONMONGERS, MANUFACTURERS, &c.
53, 54, & 55, WYCH-STREET, STRAND.

ARNOTT'S AND OTHER VENTILATORS.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES
W. BISSELL, PATENTEE,
WOLVERHAMPTON.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.
Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a newer cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

THOMAS EDINGTON,
IRON MERCHANT AND CONTRACTOR,
Inspector of Railway Bars and Castings,
17, GORDON-STREET, GLASGOW.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Tie, Bars, Columns, Girders, Socket Pipes, Rain-water Pipes, Gutters, Railing and Palisading Bars, and all Kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

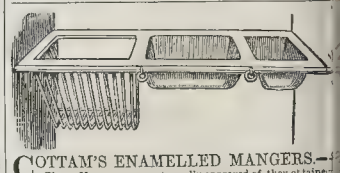
TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.

F. P. M'CARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GASWORK—pendants, brackets, chandeliers, &c.; compo, tin, and iron gas piping, and fittings in general; sheet zinc, galvanised iron, tin plates, iron wire, &c.; best lacquer, 1s. per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp.—Observe, 7, Beech-street, Barbican.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL-HANGERS, AND THE TRADE IN GENERAL.
WHOLESALE IRONMONGERY WAREHOUSE, 18, Blandford-street, Manchester-square (running out of Baker-street, Portman-square), where a large stock is always kept on hand for the exclusive supply of the above trades.
JOHN YOUNG, Birmingham and Wolverhampton, Agent and Factor.

THOS. B. LAWRENCE and CO. Zinc Dealers and Manufacturers, 10, York-place, Lambeth, having removed to their new premises, are selling SHEET ZINC at 33s. per cwt.; Perforated Zinc, at 4d. per foot; Rain pipes, 3 in. 4d. per foot, Gutters, 5 in. 4d. per foot, and in proportion. Chimney shafts, Cowls, &c. equally cheap. Plumbic Zinc, 42s. Zinc Paint and Galvanized-iron Plates. A prize medal was awarded them at the Great Exhibition.

TO GAS AND WATER COMPANIES, CONTRACTORS, AND SHIPPERS.



CAST-IRON SOCKET-PIPES and Patent TUBING, with Connections of all sorts; RETORTS OF IRON AND CLAY; FIRE BRICKS AND FIRE CLAY.
All kept in stock, and sold at wholesale prices.
Tanks, Purifiers, &c. fitted up complete, in London, the country or any part abroad.
JOHN BURNETT AND CO. 66, BANKSIDE, SOUTHWARK.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Etched Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 13, Charles-street, Long-acre, London.

TO ARCHITECTS AND BUILDERS.

CHUBB'S WROUGHT-IRON and FIRE-PROOF DOORS and FRAMES, for strong Rooms. A large stock of the above of all sizes, made in the best manner, and of different strengths, fitted with CHUBB'S PATENT DETECTOR LOCKS, throwing from two to twenty bolts, constantly on sale, at very moderate prices. FIRE-PROOF SAFES of every size, and Patent Detector Locks and Latches for all purposes.—C. CHUBB and SON, sole Manufacturers, 57, St. Paul's Churchyard, London.

PATENT CAST IRON SINKS, with TRAP complete, of the following sizes:—2 feet, 5s. 6d. each; 2 feet 6 inches, 7s. 6d. each; 3 feet, 8s. 6d. Also, about Ten Tons of Half-round Gutters, more or less broken, to be sold considerably below the usual price.—At J. JONES'S, No. 6, Bankside, Southwark.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented. Every article in Stable Furniture on show.
COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico.—All works of art of the various metals executed at the above foundry.

CAST-IRON WATER-PIPES.—TO BE SOLD by PRIVATE CONTRACT, in convenient lots, the undermentioned new CAST-IRON SOCKET WATER-PIPES, for particulars apply to THOMAS GOODMAN, 33, London-road, Gloucester:—2,700 yards of 12-inch diameter socket-pipes, about 219 lbs. per yard; 3,700 yards of 9-inch diameter socket-pipes, about 135 lbs. per yard. A few Bends and Branch pipes of each description. The pipes are new, and are now lying at Gloucester, convenient for delivery to the Great Western, Midland, and South Wales Railways.
Gloucester, March 17, 1854.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sculpian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, CHELSEA, the foot of Vauxhall-bridge.—Office, 8, Crescent-terrace, Millbank. Mr. THOS THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone. Bangor Slates, Slabs, &c. Also Flints, Lime, Cement, Pipes, Tiles, Bricks, and Fire Goods. Messrs. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be arranged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

TO BUILDERS, MASONS, AND CONTRACTORS.
OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Earl-street, Holywell street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

NEW PATENT MARBLE CHIMNEY-PIECES.—Messrs. BARRY and SON, of Scarborough, invite builders and the public to inspect their new Patent Marble Chimney-piece-, which for variety of kind, and perfection of manufacture, cannot be surpassed. Marble merchants and others have been unable to distinguish them, when fixed, from real marble. Sample chimney-pieces may be seen, priced sheets of designs, and all necessary information may be obtained at THOMAS RICHARDSON'S, 113, London-wall, Sole Agent in London for the Sale of the same.

SERPENTINE MARBLE of choice quality ON SALE, in blocks and slabs, at moderate prices. THOMAS JACKSON, Commercial-road, Pimlico.

FOR SALE, Cheap for Cash.—Twenty STRONG BOX CHIMNEY-PIECES, well got up; also several pairs of Portland Head and Foot Stones of superior quality.—For view and price apply at No. 11, Clare-hall-cottages, Jamaica-level, Rotherhithe.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of Elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St Ann's, and Ser, entine Marbles, suitable for Dining-Rooms, Libraries, Halls, and Entrance Halls; and a great variety of others in Veined, Sardinian, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, Inquisit and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

LANCASTER STONE, of superior free working quality.—Messrs. LANGWITH and THOMPSON beg to inform builders, contractors, and consumers of the above article in general, that their quarry is now fitted in complete with machinery to supply any quantity at the shortest notice.
Price and every information may be obtained on application at the Office, Elmer street, Grantham.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, and National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; and by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marbles the PATRONAGE OF HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions, most of which, I suppose, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronize the Establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear.
N.B. The Tariff for 1854 is now ready.
Pimlico Slate Works, 33 and 40, Upper Belgrave-place.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Lining, Skirting, Roofing, Malting Floors, Patent Ridge and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand. Price-lists may be had upon application, either personally, or by post.—Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, London.
N.B. Wharf opposite the Wapping Entrance of London Docks.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

LIME-KILNS and STONE QUARRY at BURWELL, Cambridgeshire. For SALE, the LEASE of a valuable Limestone Quarry and Lime Kilns. Sheds, and suitable Plant. The stone is of a very superior description, and in great demand, and is found in blocks of any size, and the refuse will make lime unequalled in quality.—Apply to C. A. GOVETT, Esq. 16, Lincoln's-inn-fields, London; or Mr. CARTER, Innkeeper, Burwell, Cambridgeshire.

BATH STONE.—HENRY STONE begs to inform Builders, Contractors, and Others, that he still continues to supply the best BOX HILL GROUND, and (Lodge Stile) COMBE DOWN STONE in Blocks, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.
H. S. also begs to call particular attention to a Quarry he has lately opened on Hampton-down, near Bath, where he has some beds of Soft White Stone, of a very superior quality, and adapted for either exterior or interior purposes.
Ashlar and Sawn Range Stone cut to order. Cargoes shipped and delivered to any part round the coast.
Residence, Widcombe, Bath.

BATH STONE DEPOT, BOX STATION.
ROBERT STRONG, STONE MERCHANT, Box, Wilts.
Box Ground Stone, Scalleb Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

ABERDEEN and PETERHEAD POLISHED GRANITE.—Chimney-pieces, Monuments, Columns, Pedestals, Vases, Monumental Urns, &c. executed on the shortest notice, and at the lowest possible prices, on application to JAMES WRIGHT, Manufacturer, 172, John-street, Aberdeen; or A. and F. MANUELLE, Granite Merchants, 12, Trinity-square, Tower-hill, London.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto; rubbed and tooled sills; Harehill and selfdaced slab; rubbed York paving; pipes, pots, &c. all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge-wharf, City-road.—Established 1821.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-park-basin.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

(DEPOTS.)	
Great Western Railway Station....	PADDINGTON.
Great Western Railway Station.....	BRISTOL.
Hope-street, Mount-pleasant	LIVERPOOL.
Castle-fields	MANCHESTER.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

CAEN WHARF, ROTHERHITHE.—GATES and GEORGE beg to invite the attention of Builders, Paviors, and Stone Merchants, to their stock of YORKSHIRE PAVING, and general assortment of stone goods, which are offered at the current prices, and on their usual terms of credit.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.
TWO superior descriptions of GRAVEL, one for Concrete and the other for Road-making, may be had upon application at the Office of the Park Estate, Plumstead, near the Royal Arsenal, Woolwich. Price 2s. 6d. per yard. Delivered into barges alongside Woolwich.

SCAGLIOLA done on an improved principle. I refer to the Gothic Arch done by D. DOLAN, which gained the only Prize Medal awarded in the British department for the manufacture of the above work. Specimens to be seen at 192, Drury-lane, two doors from Holborn, with a choice collection of ornaments for building purposes trusses for shop-fronts, always ready. Superior royal coats of arms for half the original cost.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No 91 WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS.
MAW and CO. send free, per post, their NEW BOOK OF DESIGNS,
with prices, adapting this most durable, economical, and decorative production of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient building.
BENTHALL WORKS, near Broseley, Shropshire.
Specimens at 11, Aldersgate-street.

GREAT EXHIBITION 1851, Class 27, No. 111.—JAMES LUFF, Manufacturer of all kinds of Ornamental Bricks and Tiles, Red and White, of the best quality, suitable for chimney-shafts, ridge-crests, cornices, and mouldings of every description, TUDDENHAM, IPSWICH.
N.B. Builders furnishing detail drawings can have all sorts of ornamental designs executed; a small additional charge made for the moulds.

BRICKS! BRICKS! BRICKS!—PARK ESTATE BRICKFIELDS, near the Royal Arsenal, Woolwich. Price for the present Month, and until further notice:—Stocks, 30s.; Place, 29s. per thousand. Ready money on the field.
February 20, 1854. L. DAVIS, Proprietor.

BRICKS from COWLEY and KENT. Also WHITE, YELLOW, and RED FACING BRICKS. BLUE VITRIFIED BRICKS; Fire Bricks, Lumps, and Tiles.
CHARLES RICHARDSON, 6, SOUTH WHARF, PADDINGTON.

BRICK EARTH.—TO BE LET, BRICK EARTH, of superior quality and of considerable depth, contiguous to the Station at LANGLEY, on the Great Western Railway, sixteen miles from town, and two and a half miles from the canal.—For particulars apply to Messrs. DUNN and GIBBS, 7, Great Tower-street, London.

WHITE, SUFFOLK, and RED FACING BRICKS; Kent, Grey Stocks, Malm Fronts, Shippers, &c. Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

PLACE BRICKS, in lots from 10,000 to 35,000, delivered alongside any wharf—Regent's-canal or Thames—at 23s. per thousand. A good bill for two months will be taken in payment.—Address, Z. care of Mr. Forcas, 13, Rowland-row, Stepney-green, Mile-end-road.

BRICKS for SALE: about 30,000 good Stocks, and about 70,000 Place, situated in Lamb-lane, Hackney, near the London-fields. Stocks, 38s.: Place, 28s.—Apply at H. and C. HAYNE'S, 93, Newgate-street, City.

300,000 BRICKS FOR SALE, delivered in trucks at Wimbledon Station, at 28s.—Apply to Mr. DIGGLE, Dorer; or to Foreman, in field. One Acre of Freehold Land may also be had, near the station.

ASHES and BREEZE FOR SALE, in large or small quantities, by the undersigned contractors, POUND and HUDSON, High-street, Bow, Middlesex.

BURNT BALLAST for SALE.—A large quantity of well-burnt ballast to be sold at 1s. 3d. a yard, on the ground.—Inquire of H. LAW, 1, Arthur-terrace, Caledonian-road, Islington, where the ballast lies.

DUTY OFF DUTCH CLINKERS.—The duty on this article has been nearly a prohibition to their importation; but now, particularly as they are such an everlasting brick, they have again come into general use. Where great wear is required, if they speak for themselves, when most of the continental roads are paved with them, and then sanded over, they last for years. They are also much in use for the platforms of railways. To be had wholesale only of P. VAN KEMPEN, Agent, West Ham, Essex.

SAND, GRAVEL, and GARDEN MOULD for SALE.—Apply at the Buildings, Sussex-gardens, Hyde-park-gardens.

BUILDING LAND TO LET, at very low ground-rents, for ninety-nine years, close to Regent's-park, and on the foot of Primrose-hill, a few minutes' walk from the city station,—for third-rate eight-roomed houses, for which there is a great demand in that locality, and would readily let or sell. There are some frontages suitable for shops, and others for private houses; also some with great depth behind, where workshops or public establishments might be erected.—For plans and particulars apply to F. ELLOART, 9, Harrington-square.

FREEHOLD BUILDING LAND at TWICKENHAM—3 acres, situate near the Church and Railway Station, with 1,000 feet frontage to Kingston New-road, and with private access to the river Thames at Cross Deep. The land is thoroughly drained by a capacious sewer newly constructed, and will be LET or SOLD in parcels, to suit the convenience of buyers.—Apply, for plan of the ground and further particulars, to JAMES CLARK, 94, Bishopsgate-street, London. N.B. About three acres of the ground consist of a productive well-stocked walled garden, with a large range of substantial forcing-houses.

ON THE COAST of HAMPSHIRE.—TO BE LET on BUILDING LEASES, LAND on the shores of the Solent, opposite Osborne, commanding uninterrupted views of the Channel from Spithead to the Needle Rocks. Excellent harbour for yachts, and good bathing. The proposed site forms part of the sea-cliff and lawn in the Embury estate, and in the parish of Fawley.—Apply to Mr. WM. ROSS, Steward of the Estate, the Grange, Alresford, Hants.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Bricks may be had, delivered on the site of the intended building, at 30s. per thousand.—For particulars apply to Mr. C. HANBRIDGE, Architect, 73, Coleman-street, City.

ST. BARTHOLOMEW'S HOSPITAL.—A Committee of Governors will be held at the Hospital, on TUESDAY, the 11th day of APRIL next, at EIGHT o'clock in the forenoon precisely, to receive PROPOSALS from such persons as may be willing to take, on a Building Lease, for a term of sixty-one years from Michaelmas next, a very eligible PLOT of GROUND, situate in Wood-street, Cheapside, and Fell-street; being the site of the house No 71, Wood-street, and premises adjoining to Fell-street, numbered 14, 15, and 16. Also to receive proposals from such persons as may be willing to take on a Repairing Lease, for a term of twenty-one years, a House and Premises, situate and being No 58, St. John-street, West Smithfield. A plan of the ground may be seen, and further particulars ascertained, on application at the Counting house of the Hospital, any day between the hours of TEN and FOUR o'clock; or at Mr. HARDWICK'S Offices, Henrietta-street, Cavendish-square.
March 31, 1854. WILLIAM WIX, Clerk.

WHARF in the City Basin TO BE LET, with 90 feet frontage and 40 feet depth, including a sitting-room and other conveniences. The whole well enclosed and covered with a slate roof, with abundance of light.—Apply to Mr. SILVERTON, Bridge-house, Wharf-road, City-road.

BRIGHTON.—A most eligible SITE for TWELVE HOUSES, part of a bold crescent, TO BE LET on building lease, at moderate ground-rent. Two-thirds of the amount will be advanced on mortgage.—Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery-lane.

BROCKLEY-HILL PARK ESTATE, FOREST-HILL.—TO BE LET, on Building Lease, or SOLD, several eligible lots of BUILDING LAND, commanding a most extensive prospect, rivalling that seen from the Crystal Palace. A site has been appropriated for a church on the summit of the hill, in the centre of a proposed ornamental garden of nearly 3 acres in extent. The roads, garden, and drains are being formed. Advances will be made to responsible parties.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

RICHMOND.—ST. MARGARET'S, on the banks of the Thames, opposite Richmond Gardens.—This most beautiful y situated mansion, designed by Lewis Vulliamy, esq. and recently erected by Messrs. Cubitt for a nobleman, TO BE SOLD, with such a quantity of land as may suit a purchaser. To be viewed by cards only. Apply to Messrs. HARRISON and LEWIS, No. 14, New Boswell-court, Lincoln's-inn, or GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

BUILDING LAND TO LET, in the Selhurst Road, half a mile from the Norwood Station, from 200 to 250 feet deep, lease 99 years, from 3s. to 4s. per foot. Houses to be erected of the value of 200l.—For further particulars apply to Mr. J. H. WATSON, Anerley, near the Station.

EARL'S-FIELDS, Grantham, Lincolnshire.—TO BUILDERS, CONTRACTORS, TIMBER MERCHANTS, CAPITALISTS, and OTHERS.—TO BE LET, from APRIL next, a very desirable BUILDING ESTABLISHMENT and TIMBER-YARD, with a good dwelling-house, offices, spacious workshops, engine-house with high chimney, and other out-buildings, replete with every convenience, &c., offering an opportunity for investment rarely met with. These old-established premises are most admirably situated in all respects for carrying on a first-rate and lucrative business, as they adjoin the Ambergate Railway Station, and are within a few hundred yards of the Great Northern Railway Station. The tenant can be accommodated with about 15 acres of good grass land adjoining the premises; and as there is abundance of excellent clay and sand close to the surface in one of the fields, the tenant will be permitted (if he chooses to erect a public brick and tile-yard in the said field. For rent and particulars apply to the Agents of the Earl of Dysart, at the office, Buckminster-park, Colsterworth, near Grantham.

LARGE and LIGHT WORKSHOPS TO BE LET, with Steam-power. The shops are light, lofty, perfectly dry, and the rent moderate.—Apply on the premises, 13, Pump-row, Old-street-road, St. Luke's.

CLAPHAM-PARK.—TO BE LET, in the most desirable part of Clapham-park, a few PLOTS of FREEHOLD LAND having a southern aspect, each containing 600 feet.—For terms and particulars apply to Mr J. T. KNOWLES, 1, Raymond-buildings, Gray's-inn.

GROUND TO LET, for Building, in the parish of SHOREDITCH, at the rear of Messrs. Bellingham's Distillery, Queen's-road, Dalston, in Plots, which will be pointed out by Mr. HARRIS, at the Counting-House on the Estate; and in the parish of ISLINGTON, at Grove-road, near the Cock Upper Holloway, in Plots, which will be pointed out by Mr. GREEN, at the Counting-house, on the Estate.—Apply for particulars as above, or to D. HUGHES, Solicitor, 13, Gresham-street, City.

NORWOOD and ANERLEY, opposite the entrance to the Crystal Palace Railway Termini. FREEHOLD BUILDING LAND TO BE LET, in Plots on leases for nine-and-one years, well adapted to the erection of shops of every trade and private residences, together with two excellent sites for first-class taverns, which are immediately requisite.—For plans and particulars, apply to Mr. JAMES BRIGG, Surveyor, 3, Devonshire-villas, Roll's-bathe Surrey.

BAYSWATER.—TO BE LET, for BUILDING (in Bendemeer Villas, Westbourne grove, a very eligible FREEHOLD SITE for six first-class dwelling-houses, and any combination can be made in the rear. First, feet frontage by 150 feet deep. Apply to Messrs. MAY and SWEETLAND, 14, Queen-square, Bloomsbury.

FREEHOLD GROUND-RENTS for SALE, to buy at per cent, being out of property in the metropolis, from to each, being convenient and unlet; small or other specialties. For further particulars, apply to Mr. A. C. HOOK, Land Agent and Surveyor, 124, Great George-street, Westminster.

FREEHOLD LAND TO BE SOLD OR LET, a PLOT, having two frontages of 104 and 124 feet, situate in the Cottenham Villas, in the parish of Barnes, Surrey. Apply, by letter, to W. B. 9, High-street, Peckham.

TO BUILDERS, MASONS, &c.

TO BE SOLD, a most eligible piece of FREEHOLD LAND, with a frontage to the London-road of 14 feet, by a depth of 90 feet, adjoining the railway station at Enfield Town, Middlesex; with buildings thereon, lately used as a mason's shop, yard and premises, for which, or for a general timber trade, they are well adapted, offering an excellent opportunity for a first-rate timber-merchant and builder. Price, &c. For particulars apply to W. FRANCIS, Silver Plate Warehouse, 220, Regent-street, London, or Mr. THOS. SEARLE, Stone Merchant, Portland Wharf, Vauxhall-bridge-road.

KENNINGTON.—To BUILDERS and others requiring Premises.—TO BE SOLD a valuable Leasehold Property, situated in the best part of Kennington-common, comprising capital dwelling-house, with garden, and extensive workshops, with good frontage to the main road, and commanding a ready access by means of large coach-house entrance. Rent only £40 per annum. Apply to A. B. C. N. 7, Coburg-place, Kennington-lane.

THREE excellent Eight-roomed CARCASES, with kitchens and water-closets attached, ready for roofing, all drains in, and in a forward state, will be SOLD by Auction, if not previously disposed of by Private Contract, on Tuesday next, at Two o'clock precisely, on the premises, Grange-road, Hackney, by Mr. CABLE, without reserve. For particulars, apply to the Auctioneer, 9, Finsbury-pavement, City; or to ANDREW BRUCE, Jun., 1, Allan-street, Canon-row, Islington.

TO BUILDERS AND OTHERS.

SIX CARCASSES in Cambridge-road, Hackney, near Victoria Railway Station, FOR SALE, LET in Lots, or as a Whole, or Road Fast. Money will be lent to Build, if required.—Apply to Messrs. THOMAS and SON, Pen-court, Fenchurch-street.

WATERSIDE PREMISES.—WANTED, a Wharf or Premises, with LANDING WHARF, in the River between Waterloo and Vauxhall Bridges. The vicinity of Lambeth would be preferred.—Apply to JNO. BILLING, Esq., St. Parliament-street, Westminster.

WANTED, in the neighbourhood of Bayswater, a small FREEHOLD HOUSE, with Shop and Parlour, to be LET or SOLD. A freehold residence preferred. Address, A. Z. 2, Stone-place, Albion road, Stoke Newington.

THE ST. MARGARET'S ESTATE, RICHMOND.—The magnificent mansion and park at ST. MARGARET'S, opposite Richmond Gardens, and the market in Richmond-town, for the Houses of Twelve and Fifteen Members of Parliament, respectively, to be sold by the EXECUTIVE COMMITTEE of the CONSERVATIVE LAND SOCIETY. The purchase money having been paid on the Lady Day, the allotment fixed for WEDNESDAY, the 7th of JUNE. Cards will be duly forwarded to the Members entitled to allotments. Applications to the Secretary. The St. Margaret's may be reached either by the steamers, by omnibuses to Richmond, or by the South-Western Railroad, at the Twickenham, Isleworth, and Hounslow stations.

CHARLES LEWIS GRENEISEN, Secretary.

Offices, 3, North Lodge-st., Strand, April 24, 1854.

TO CARPENTERS AND BUILDERS.

TO BE DISPOSED OF, the Lease of Premises and Workshops, with Goodwill of a Business in the above-named trade, carried on by Mr. A. in Trade. The workshops are capable of holding twelve benches. Situated in the most thickly populated locality in the neighbourhood, and in connection with N. B. The business and stock-in-trade may be had without the premises, if required. The workshops at a moderate rental. Address, C. R. 9, Dyke-place, The Builder.

NEW PATENT LAW (15 & 16 Vict. c. 83), as to the GREAT SAVING OF EXPENSE.—The Client or Inventor can, in all particulars as to the necessary steps and fees for the grant of letters patent for the United Kingdom, or foreign countries, may be had gratis, by applying per post-card, or by letter, pre-paid, to Mr. PRINCE, Patent Office, 4, Temple-street, Charing-cross, London.

THE EDINBURGH REVIEW, No. CCII. will be published on TUESDAY next.

LLOYD'S WEEKLY LONDON NEWSPAPER, 4,648,025.

Being ONE HUNDRED and THIRTY THOUSAND NINE HUNDRED and SIXTY SEVEN more than ALL the above Paper combined

LLOYD'S WEEKLY LONDON NEWSPAPER is Edited by DOUGLAS JERROLD, and, in addition to all Writings by the Editor, contains SIX COLUMNS of the LATEST NEWS, obtained by Electric Telegraph, and other extraordinary means, regardless of expense. Threepence per free.

London: E. LLOYD, 12, Salisbury-square. Sold by all Newsagents in the world.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,

LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects. Portraits of Animals, Machinery, Plans, Sections, and Diagrams, or Engineering Drawings. Medical and Botanical Subjects, executed in a superior style peculiar to this establishment. Catalogues can be had.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.

FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to Solicitors, Engineers and Surveyors, Station rs and Printers, throughout the country, great advantages for the rapid and economic execution of their Lithography. If required, a plan receive by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon

LITHOGRAPHY FOR COMMERCIAL PURPOSES,

Messrs DAY and SON have just erected the largest premises for the purpose in the world. To facilitate the country orders from Manufacturers and others for

PATTERN BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithography and Colour Printing, Messrs DAY and SON propose a style of work of unequalled excellence, with economy and expedition. The smallest customers of the productions of Lithography to an part of the Kingdom should apply to Messrs DAY and SON, for estimates, and should be glad, now to the extensive Establishment, that its many and extensive arrangements for every description of work, great speed, and moderate charges, can be secured with satisfaction and saving to the customer

PRINTING IN COLOURS.

As perfection and precision by Messrs. DAY and SON, has assumed a position in these departments of unrivalled excellence, rapidity of execution, and economy of production. The first and only perfect imitation of a painting in colours. "The Blue Boy" Over 17 inches, executed at the establishment, secured for itself the designation of a "painting Print" other examples of great merit in reproductions, illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."

These works, although entirely printed in colours and sold, have been sold at the price of uncoloured works. The last named, consisting of 180 plates, issued in Fortnightly Parts of four plates, proves the possibility of adapting Chromo-lithography to Periodical Works. Book Plates requiring long numbers cheaply and quickly and to designs of their own. Maps.

Messrs. DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own Sketches, by means of Lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,

LITHOGRAPHERS TO THE QUEEN.

17, Gate-street, Lincoln's-inn Fields, London.

HAWKIN'S Patent Metal, Capped, and Braced Painting and Artist Brushes.—Manufactory, 17, College hill, Cannon-street, London.

LITHOGRAPHY.—C. MOODY executes every description of LITHOGRAPHY for Professional persons or the Trade. Portraits, landscapes, &c. sketched or copied from the roughest drawings. Engineering and Mechanical drawings correctly detailed by experienced hands. Presses, stones, chalks, &c. Artists and amateurs supplied with sketch-books, portfolios, and every requisite for drawing and painting. Specimens of every class of work for inspection; estimates given; instructions afforded.—237, High Holborn.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.

PLANS, ELEVATIONS, DRAWINGS of MACHINERY, &c. lithographed or engraved

BUILDERS' and CONTRACTORS' ACCOUNT-BOOKS; DRAWING PAPERS; ditto, mounted and continuous; TRACING PAPER and CLOTH; ditto in lengths.

GENERAL STATIONERY, for the use of BUILDERS, ARCHITECTS, SURVEYORS, and ENGINEERS, at the lowest current rates.

WATERLOW and SONS, 65 to 68, London-wall; and 49, Parliament-street, London.

Contracts for the supply of large establishments.

SURVEYING, ARCHITECTURAL, and ENGINEERING ESTABLISHMENT.

For preparing Gentlemen for Surveyors, Architects, Engineers, Levellers, Draughtsmen, Measurers, Valuers, &c. and for giving EVENING CLASS INSTRUCTION, in Architectural and Civil Engineering, Drawing and Designing, making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Preparing Estimates, &c. &c. Terms moderate.—For prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water-Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," begs to announce that he executes Drawings, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be observed in Drawings, and begs to be interrogated in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

DECORATIVE ARTISTIC PAINTING.—Mr. F. SANG, from the Royal Academy at Munich, whose works may be seen in the leading public and private buildings in the metropolis and the country, draws the attention of his patrons to his new and improved STYLES of ARTISTIC EMBELLISHMENTS and DESIGNS, in the modern and ancient styles.—Address, Mr. SANG, 28, Pall mall, London.

LIGHTERAGE.—TO SAW-MILL PROPRIETORS, SLATE MERCHANTS, and OTHERS.—SAMUEL WILLIAMS, Licensed Lighterman, 4, Hope-lane-road, Lambeth, begs to assure those who may favour him with their orders, that they will be executed with the utmost despatch, at the most reasonable charges.—Prompt attention given to orders forwarded by post.

ONE THOUSAND BEDSTEADS TO CHOOSE FROM.—HEAL and SON'S Stock comprises handsomely Japanned and Brass-mounted Iron Bedsteads, Children's Cribs and Cots, of new and elegant designs; Mahogany, Birch, and Walnut Bedsteads, of the soundest and best manufacture, many of them fitted with Furnitures complete. A large assortment of Servants' and Portable Bedsteads. They have also every variety of Furniture for the complete furnishing of a Bedroom. HEAL and SON'S ILLUSTRATED and PRICED CATALOGUE of IRON BEDSTEADS and BEDDING, sent free by post.—HEAL and SON, 196, Tottenham-court-road.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London made instruments, and considerably under the usual charge. S. BARLOW, 3, Thavies-inn, Holborn (between 1 to 3 p.m.), or to Mr. H. B. BARLOW, Office for Patents, Duke-place, Exchange, Manchester.

R. E. HODGES'S PATENT INDIA-RUBBER ACCUMULATORS applied as SPRINGS TO DOORS

Size A, for half-doors, and light doors, 1s. 3d. each.
" B, for doors, 1s. 6d. to 2s. 6d.

The price includes hook, screw, and directions how to fix. Extra sizes with proportionate charges. N.B. An allowance to Merchants and Builders. No. 1, Auburn-terrace, Russell-square.

NORRIS'S PATENT RAILWAY CHAIR COMPANY beg to draw the attention of Railway Companies and Engineers to NORRIS'S PATENT RAILWAY JOINT CHAIRS. This patent has received the unqualified approbation of some of the most eminent engineers of the day, as the most effective combination and perfect joint for the present time. The simplicity of its construction is such as will allow of its application to any line of railway, with a transient, slightest hindrance to the ordinary traffic during the time that it is being laid down. The saving in the preservation of the permanent way and rolling stock, by the application of Norris's Patent, is incalculable; and wherever adopted must very considerably decrease working expenses. To railway companies, having old and defective rails, the principle is peculiarly advantageous, as its application will in every instance be found equally safe and serviceable as a basis for many years but, at the same time, bring an efficient use of the old and broken chairs. To the railway world in general, it is of the greatest value, as a system of the most long-tried, and in most simple and economical principle. Every information will be given, and models forwarded for inspection, on application to the Manager, at the Offices of the Company, Wolverhampton.

TO IRONMONGERS, SMITHS, &c.

TO BE DISPOSED OF, at the West-end of London, a good BUSINESS in the above branches, well established, and capable of extension.—Apply, by letter only, to L. A. T. 23 Grafton-street, Fitzroy-square.

TO PAPER HANGERS, PAINTERS, DECORATORS, &c.

A FIRST-RATE BUSINESS in the above line TO BE DISPOSED OF, in consequence of the recent decease of the proprietor, situated in the principal thoroughfare in the City of London, an extensive shop, with a splendid show window a large counting-house at the back of the shop, with a good private entrance; rent very low. For particulars, apply to W. B. Clarke's Dome Rooms, Cancery-lane.

TO PLUMBERS, GLAZIERS, PAINTERS, AND PAPER-HANGERS

THE GOODWILL and PREMISES of an old established and respectable BUSINESS in the above trade in the flourishing market town of Hemel Hempstead, Herts. TO BE SOLD.—For particulars, apply to Mr. GEORGE ALEXANDER SMITH, Surveyor, Hemel Hempstead, Herts.

SUFFOLK, near Stowmarket, twelve miles from Bury St. Edmunds, fourteen from Ipswich, and within half a mile of the Station on the Eastern Counties Railway.—To COACH-BUILDERS, WHEELWRIGHTS, and SMITHS.—To be DISPOSED OF (in consequence of a recent bereavement), the entire STOCK, and UTENSILS in TRADE of the above business, established upwards of 15 years, and the connection is of the largest respectability. The dwelling-house is small, but convenient, consisting of two sitting-rooms, three bed-rooms, kitchen, cellarage, &c. and the premises admirably adapted for carrying on the above business, comprising convenient work-shops, paint-shop, show-room, warehouse, covered saw-pit, stable, shop, six-stall, and timber-yard all in excellent repair. The finished stock-in-trade consists of four gig, phaeton, Stanhope, odd springs, market, and dog carts. Several bodies and carriages unfinished, and the unmanufactured seasoned stock is varied and of a useful character. Coming in 2401.—For further particulars apply to Mr. JAMES FROST, Gisburn-rise.

The Builder.

SATURDAY, APRIL 8, 1854.

RESUMING our glance at steam naval architecture, let us now pay a visit to Messrs. Penn's large manufactory at Greenwich, where we find that the operations are in variety almost a duplicate of what we have already noticed at Messrs. Maudslay's. The latter being engaged more exclusively upon the largest class of engines, use a greater number of the heavier class of tools. Messrs. Penn employ at present about 700 men. They are distinguished for excellence in marine mechanism, and must be especially familiar to some sections of the London world by the beautiful and compact oscillating engines employed in many of the river boats. Their shops may be subdivided almost in the same manner as Messrs. Maudslay's, and in both we see employed those unique tools, the invention and manufacture of Mr. Joseph Whitworth, of Manchester. When we visited Messrs. Penn's establishment, we observed many castings of screw propellers lying about, and some of very large size were being turned out to receive the shaft. This is indicative of the growing popularity of the screw over the paddle.

In all marine engines economy of space is a prime requisite. The paddle and the screw require different adaptations of steam power to develop their respective advantages, and Messrs. Maudslay hold many patents for these adaptations. For the paddle they have feathering boats, direct-acting double cylinder engines, and direct-acting annular cylinder engines. By the way, we may explain the term *direct-acting*. It means that the piston-rod of the engine acts directly upon the crank of the paddle-wheel or screw without the intervention of any beam. This saves room, weight, and friction.

For the screw propeller there are horizontal direct-acting steam-engines, constructed to occupy little space, and to be altogether below the water-line. Then for shallow river navigation there is the direct-acting double piston-rod marine steam-engine. There are also the marine beam engines, largely used in the royal navy, but now being succeeded by the oscillating cylinder.

Messrs. Penn are great, too, in the oscillating engine. They hold a patent also for another improvement called the "trunk" engine, which is especially applied to the screw propeller. The peculiarity of this construction is, that the piston-rod is widened into a hollow cylinder called the trunk. It projects through both ends of the steam cylinder, and has the connecting-rod joined to its centre. In that position the width of the trunk allows it to play at every stroke, and the stuffing-boxes serve as guides. Although there are some drawbacks attendant on this plan, yet it does away with some expensive parts of the ordinary mechanism, and effects a great economy of space.

The reader curious in the details of all these varieties must be referred to Mr. Weale's works. Here we may just allude to what has been found by experiment most advantageous for the screw propeller: "Direct action from the engine to the screw shaft; the cylinders to be short but of large diameter; and air-pumps to be worked by another crank or eccentric on the engine-shaft, of short throw, but very large diameter."

One most important modification of the use of the screw is the power we possess of using it as an *auxiliary*. "It rests," says Mr. Dodd, "upon the principle that during a favourable wind a ship shall progress by means of her sails, but that when bad weather sets in, a screw and a steam-engine shall set to work and render good service at a time when the poor ship would be otherwise beating about at the mercy of adverse winds, or else absolutely powerless in a dead calm. A vessel so constructed has a screw and engine skilfully placed so as to be out of the way when not wanted, and yet quickly available in time of need: the quantity of fuel carried is but small, while the spare room for cargo is much larger than in any ordinary steamers. Our merchant ships, our war ships, our Arctic exploring ships are now giving indications that the auxiliary screw principle is rising rapidly in favour. Indeed, it is evident that there are many sources of advantage here in store; for it is optional to the commander to employ steam power just when and as often as he may choose or his stock of coals may admit. He has wind to appeal to if short of coals; he has coals at command if ill provided with wind.

Mr. Joseph Maudslay holds a patent for a propeller of this description, which we describe briefly in his own words:—"It is so constructed that the blades can be turned fore and aft from their proper position for propelling, and thus assume a line with the keel of the ship, so that, when steam power is not used, and the vessel is put under canvass alone, no necessity exists for taking the propeller out of the water, as the blade will not offer any resistance to the progress of the ship. We subjoin some curious statistics bearing on the subject, from the source we have already indicated.

"Let us imagine that a bird's-eye glance could be taken at the surface of Europe, in relation simply to the steam-ships which have been mainly established for post-office service. We should see the steamers of twelve companies, forming an unparalleled fleet of a hundred splendid ships, employed by the English Government alone. These ships (it has been lately stated) have cost not less than 3,000,000*l.*; they have 30,000 horse power of engines, and 80,000 tons burden. They traverse 2,000,000 miles of ocean in a year, and their owners receive 750,000*l.* per annum from the British Government for postal service. Southampton is the packet station for nearly one-half of these fine steamers; and the three companies which make it their depôt, receive much more than one-half of this large sum. If we watch these hundred steamers, careering over seas and oceans, we find that they touch at most of the great ports in both hemispheres; they carry not only British letters to foreign countries, and foreign letters to the British dominions, but also foreign letters to other foreign countries. France, Denmark, Spain, Holland, all have colonies separated from the mother country by the broad Atlantic; but none of these use their own steamers to perform the mail service to those colonies; it is either effected by sailing vessels, or by the English mail steamers, the latter being the method now adopted more extensively year after year." The West-India Company take such mails to the colonies lying contiguous to America; the Peninsular and Oriental Company convey those bound eastward; and in such cases the mail-bags from foreign countries are either brought to Southampton, or we pick them up at Cadiz, or some other port.

How strangely does it strike the mind—how subversive of old-time associations—to read such an advertisement as the following:—"Steam communication between Cairo and the First Cataract. The Egyptian Transit Administration begs to inform travellers that a steamer will be despatched from Cairo to Assouan on or about the 10th of every month. * * * * The whole voyage will be accomplished in seventeen or eighteen days, including about 210 hours' stoppages at all the places where the principal antiquities exist." Napoleon talked to his soldiers about forty centuries looking down upon them from the Pyramids; but if the builders of Edfou, and Denderah, and Thebes could "look down" upon a puffing, panting creation of "Penn and Sons," or "Maudslay and Co." rattling audaciously along at the very foot of the sacred temples, the sight would be much more startling than that of an armed host, and more significant of the progress which the last hundredth part of forty centuries has witnessed.

At Glasgow, a million and a half sterling has been expended in forming embankments, building quays, deepening the bed, fixing beacons for twenty miles down the river, providing sheds, and other apparatus to facilitate the loading and unloading of ships; by such means has the Clyde become one of the most wonderful rivers in Britain. On its banks are to be found the works of Robert Napier, of Tod and Macgregor, of Caird, of Wood, and of other firms whose names are connected with the progress of modern navigation.

"If we glance at Liverpool instead of Glasgow, the shipping phenomena are still more astonishing. Here we find a range of docks more than four miles in length; in which there are sometimes as many as 800 ships moored at one time, and the construction of which cost twelve millions sterling. Liverpool is now the greatest port in the world, in respect to the value of its exports, and the extent of its foreign commerce generally. New York, the first city in the United States, is more populous, but its commerce does not equal that of Liverpool. The shipping trade is rather less than that of London, but the exports amount to a greater annual value. These amounted in 1850 to the almost incredible sum of 35,000,000*l.* much more than one-half of the whole exports of the whole United Kingdom."

THE TUBULAR AND BRICK SEWER QUESTION.

The consideration of the drainage question was resumed at the Institute of Architects on the 3rd instant, occupied the whole evening, and was ultimately adjourned. We shall give some particulars next week. Mr. Bazalgette, the engineer of the present sewers' commission, who opened the matter on that evening, took upon himself to make some observations upon the course pursued by this journal on the question, in a tone which was both impertinent and offensive. Our readers know perfectly well that we have carefully avoided partizanship in this matter, and were never able to fall in with the views of those who advocated the minimum size for drains and sewers, although we saw too clearly the value of pipe drains, the evils attending the old system, and the importance of lessening the cost of drainage, not to give all the assistance in our power to the full discussion of the question, with a view to arriving at the truth. The example which the engineer to the Commission gave of our erroneous statements, was the paragraph in our last number as to the manufacture of drain pipes. His actual contradiction, however, came to this, that there were 26,000 houses in the metropolis drained with pipes; that of these 20,000 were drained with 6-inch pipes; so that there could not be 15,000 drained with 4-inch pipes; and that he did not believe 250 miles of pipe sewers had been laid in the streets of the metropolis.

The statement in question was made on what we believe to be good authority, and without a particle of feeling on our side in favour of 4-inch pipes,—rather the reverse, indeed. Up to the time of the change of the first Commission, the whole of the house-drains put down, we are told, were 4-inch, and it was on the authority of one of their own surveyors that it was stated that full two-thirds of the house-drains since used were also 4-inch drains. Mr. Bazalgette's mode of proceeding on Monday night would not lead us to take his statement in preference. The general lengths of the sewers produced

were stated in the estimate of the Messrs. Doulton, who themselves estimate that they manufacture one-fifth of the pipe-sewers made throughout the country: and they manufacture at the rate of ten miles of sewer a week. The estimate was exclusive of the red-ware pipe used,—used rather extensively with fire-brick pipe in the north. The objector may soon settle any inexactitude in the *estimate* made on the authority of respectable makers, by giving a return of the lengths of all the pipe-sewers, private as well as public, laid down in the metropolis; and all the houses drained with pipe-sewers of different sizes; distinguishing all the houses which had been back-drained, and the dates when they had been put down; and the total expenses of all the replacements and stoppages as *compared with the expenses of cleansing and replacing equal lengths of brick sewers*, large enough for men to enter, and the average expense of repairing and cleansing brick house drains, as returned, upon house-to-house inquiries, in eight parishes.

Some of Mr. Bazalgette's statements, denying that the old sewers were in the condition represented in official blue-books, went to impute perjury to a number of persons, and ought to be inquired into.

We have been blamed, by implication, in several journals, for asserting that a fresh epidemic, caused by the leakage of the drains, had broken out at Croydon, and are asked to say that the town is perfectly healthy.* The statement in question was not ours: it formed part of the paper read by Mr. Boulnois at the Institute, and printed in our columns, and for which we are no more responsible than the *Times* is for the statements daily published under the head of parliamentary intelligence.

TOTTENHAM.

OBSERVING in your journal for last week, a report of a paper read at the Royal Institute of British Architects, by Mr. W. A. Boulnois, upon "the Drainage of Buildings and Streets in the Metropolis," in which the following paragraph occurs, viz.:—"One of the places most insisted upon as an experimental proof of the efficacy of the pipe-drainage, is Tottenham,—now there is a portion of Tottenham, lately called Marsh-lane, but now Northumberland-park, where the system of the Board of Health has been most efficiently carried out by Mr. Pilbrow; the houses are well drained, but the subsoil drainage not being provided for, the basements, after heavy rains, stand in water. The year before last, the water rose in the basements of some, which I had occasion to visit, 18 inches, and had so saturated the walls as to injure them permanently. Had the drainage been according to the system of the Metropolitan Commissioners of Sewers, this most serious evil would have been avoided, and the house-drainage equally good. I am aware that a sufficient fall could only have been obtained at a great distance, and that the present system is the only one the place could yet pay for; but it affords a strong proof of the great gain, which, when there is an opportunity, arises from the combining the subsoil and house-drainage;"—

I shall feel obliged if you will allow me, through the medium of your Journal, to correct any erroneous impressions which such a view of the case might convey to the public, and to explain to Mr. Boulnois very briefly the exact state of the question, as I feel assured that he, not knowing as much of the circumstances and locality as I necessarily do, has given this most undesignedly, but erroneously, as an instance of what he wishes to illustrate.

The facts are these, that the first two pairs of houses built upon the estate mentioned were commenced without giving the legal notice to the Local Board of Health, as required by the Public Health Act: the builder was summoned before the magistrates and convicted: being the first case of the kind, I believe the penalty was mitigated, and my reply, I recollect, when asked what penalty was deserved, was, that the penalty of a tenantless and damp house would be a sufficient punishment. Had the notice been given and plans deposited, in *such* a situation, a basement would not have been *permitted*, and it has not been in the adjoining fourteen houses which the same party has subsequently built.

The locality is little above the surface of the water of the river Lee, and *below* the surface of the upper pond of the navigation. To get a fall sufficient to take the *common* drainage of the *surface*, requires great precision of levels. *Deep* drains were out of the question, as they would have been always filled by the water from the Lee river, which is the only outfall.

The practice here (in the town of Tottenham)—for it is the *town* which has the honour of being quoted as an example, and not this private building estate*—has been to lay the main sewers low enough to drain not only the deepest cellars in the town, but the foundation of the houses, and substrata through which the sewers pass,† leaving the *old* and more *shallow* sewers to carry off the surface-water alone; and with considerable experience in the *pipe*-drainage of towns, I have found no difficulty in doing this, whenever *I considered it advisable*.

I trust, after this explanation, the drainage of the estate alluded to, though being within the district, will not be confounded with the public sewerage of the town of Tottenham.

JAMES PILBROW, Engineer.

"OUR OPEN SPACES."

IN all matters of political or social grievance, to "write to the *Times*" has become a proverbial remedy, and in all questions relating to metropolitan improvements, I believe, to "write to the *Builder*" will be found to be equally efficacious.

In the last number of your excellent publication, I was somewhat struck with the sympathetic bemoanings of "Respirator" upon the anticipated loss of our "open spaces," reminding one of the mournful complaint of the poor Finsbury apprentice, that "now-a-days there were no more (Moor) fields." "Respirator" feelingly alludes, among other sites, to the open space at the south-east corner of St. Paul's Churchyard, which he states, "by the planning out of the pavement, it appears is again to be blocked up with buildings."

After so noble an opening has been formed, and the colossal façade of a palatial warehouse erected, to block up the open space in front would surely be a public calamity, and one to which I am confident the present eminent City architect would never submit, unless from that all-powerful cause, the vast outlay which it has cost the corporation of London to settle the enormous compensation claims, and the consequent necessity of reimbursement in the shape of ground-rents.

With the City Improvements Committee it must be "their poverty not their will consents" to allow a project to be entertained so totally inconsistent with their calling, and I sincerely trust that the *Builder* will raise its powerful advocacy in preventing so fatal a blot upon the fair fame of a committee who, in their straightforward line in New Cannon-street, have, in a great measure, redeemed the tortuous windings of Gresham-street West.

It is, I believe, generally understood that Messrs. Behrins are to be re-cooped on the south side of the new street, and that the distinguished professor of King's College is to give us a rival façade to that of Messrs. Cooks. Pray, therefore, let the present open space be preserved from warehouse encroachments, and let it be applied to the more noble and suitable purpose as a site for placing a statue to London's great architect, Sir Christopher Wren.

"Si monumentum requiris circumspice"

may be adduced in reply to this appeal, but let the city of London possess the statue as well as the cathedral monument of its great adorner, and instead of joining the Mammonian and utilitarian outcry of removing his sacred edifices, let us embrace the present opportunity of doing some slight measure of justice to that great and good man, and endeavour, if possible, to efface the recollection of that reproachful line, "*While Wren with sorrow to his grave descends.*"

Let a statue of *Wren* be placed on this most appropriate site, in view of his greatest work, and engrave on the pedestal (after the manner of the plan in the Roman Forum) our neglected architect's plan for rebuilding London after the Great Fire, and thus show to posterity what London might have been, had not private interests been allowed to interfere with the public good.

We have statues of royal personages, of our military and naval heroes, and of our distinguished statesmen, why should our great artists, our metropolitan adorners, and benefactors be neglected? and what more fitting time than the present, when our Chief Commissioner of Woods and Works is requesting information respecting the number of our public statues.

Should, unfortunately, the civic exchequer be not sufficiently well stored to meet this debt of gratitude, I feel assured there would be no want of zeal or money contributions to purchase of the City this plot of ground for so legitimate and worthy a purpose.

Our great church dignitaries, from the archbishop and dean to the minor canons,—the Trinity corporation, with our royal patron of the fine arts, Prince Albert, at its head,—the Bank of England, the East-India Company,—our merchant princes and bankers,—the great city companies,—would all most cheerfully respond to your call *con amore* for so noble an object; and though last in my list, not the least to evince their gratitude to Wren, the Royal Institute of British Architects.

A CITIZEN.

PORTABLE SHOPS AND STORES FOR MELBOURNE.

THE great want in Australia is house-accommodation: a hut in Melbourne commands more rent than a mansion in Park-lane; and it has been estimated that the influx of emigrants to Melbourne alone will probably require annually the erection of 2,000 houses, capable of accommodating five persons each on an average, for the next ten years. All sorts of expedients have been adopted to supply the demand, and a company was established a few months ago with this end in view,—the Melbourne and Colonial House Investment Company. They use various materials, including, we believe, hollow bricks, and arrange so that the houses may be easily erected at their destination.

Mr. Hemming, of Clift House, Bristol, has recently erected for them some sets of shops and stores, with dwellings above, which are about to be sent out to Melbourne. Annexed we give a view of one of these, that our readers may know the shape they take. Each shop or store is 37 feet by 25 feet, fitted up with shelves and mahogany counters, with an apartment at the back, 25 feet by 6 feet. The shop-fronts are of plate-glass. Stairs, with a private door under the colonnade, lead to a sitting-room 16 feet by 12 feet, three good-sized bed-rooms, and various closets on the floor above, protected back and front by a verandah. The lower floor is 12 feet high; the upper floor 11 feet. Each house is supplied with large tanks, to collect all the water from the roofs. The roofs and walls are of galvanized corrugated iron. The lower framework and all the girders are of oak, and the framework of pine. The total length of the building is 100 feet by 49 feet.

We have before now spoken of Mr. Hemming's establishment, and of the portable houses and churches constructed by him.

The houses consist of an iron or timber framing, if of timber $4\frac{1}{2}$ in. by 3 in. or 3-inch square scantling, and sills of oak, or Memel; in storied houses the scantlings are increased in proportion. The walls and roof are of galvanized corrugated iron, the ridge capping of the same material. The walls are lined in the inside with half-inch boarding, covered with canvass, ready for papering, leaving a space of $4\frac{1}{2}$ or 3 inches throughout the entire build ng between the iron and the wood-work, afterwards to be fitted up with any non-conductor, by which means ventilation is effected, and the temperature in summer much lessened, and increased in winter: this place is adapted for $4\frac{1}{2}$ or 3-inch brick-work. The ceilings are of canvass with felt, ready for papering. The space between the felt and the galvanized roof to be filled up with any non-conductor. The doors are panelled; the sashes glazed, with shutters and fastenings. The whole is put together with iron screws, and completely erected at the works previous to shipment.

They seem exceedingly well adapted to their purpose, and pack closely for the voyage.

* We have also received a letter from Mr. Wykes, clerk to the Croydon Local Board of Health, which says the statement is untrue, and that for the last twelve months Croydon has been unusually healthy.

* This estate was not included in the public works of sewerage by the Local Board of Health, though the water supply has since been given, in like manner as to the rest of the district, but the drainage was done at the cost of the proprietor or leaseholder on the estate, and carried to a separate outfall from that of the town, though, of course, according to the plans and under the direction of the board's engineer.

† See Mr. Bazalgette's Report to the Commissioners of Sewers of Tottenham, &c.

SHOPS AND STORES, WITH DWELLINGS ABOVE, FOR MELBOURNE.

THE WEAKNESSES OF MODERN ARCHITECTS.

A TRENCHANT lecture on architecture, was delivered by Mr. Allan Fraser (an amateur), a few days ago, at Arbroath, and although it specially bore reference to the local buildings, it treated of principles which interest all, as our readers will see from the following portions of it. While admitting the justice of most of Mr. Fraser's observations, and the shrewd common sense which marks them, we would caution him against dogmatism,—against the belief that his present views *must* be right. Further consideration may show him that there is much to be said even against his principal position,—a reason why he should speak without harshness of those who have acted on the opposite opinion.

During all my examination of ancient buildings, said he, I have ever found strong proofs that one great principle, that of usefulness, had suggested and controlled their original construction, and however quaintly picturesque in some of their lesser features even, they clearly indicate the fact of their having grown out of the requirements of the individuals or bodies for whom they were erected, and that invariably their exterior forms correspond in character with the interior arrangement, and with the end and object for which they were designed. But I have failed in my attempts to discover any such leading principle as usefulness regulating the construction of modern buildings. I see police offices, infirmaries, railway stations, clergymen's manses, jails, country mansions, villas, and farmhouses, all possessing pretty nearly the same external features, and all bearing evidence of a want of consistency or harmony between their exterior and interior arrangements, and the requirements of those for whom they have been erected. I shall now proceed to point out a few particular examples of this deviation from ancient practice in modern architecture; and will first direct your attention to the exteriors of such of our public buildings as have been designed in professed imitation of Elizabethan architecture. You are no doubt all sufficiently familiar with the exterior of the Arbroath Infirmary to recollect that it has, besides the two end gables necessary for the construction of its main roof, other three gables placed with geometrical exactness both in size and position on the front elevation. Now, I object to those three gables, not on the ground of their having been so placed, but from their being comparatively of no use. They do not contribute to the internal accommodation in the way they pretend to do. The extent of the projection of these three gables from the front wall is not correspondingly repeated in the interior of the building, and their roofs do not appear there at all, so that their principal use appears to be merely to make the building look Elizabethan.

I must ask you to bear this fact in mind, as it shows what I have already told you, that, notwithstanding their keen appreciation of picturesque forms, those to whom we are indebted for the realities of this style of architecture were never induced to falsify the exterior of their buildings merely to obtain variety of outline; neither have I ever seen an instance of their having placed overhanging roofs and wooden mouldings on houses with walls constructed of stone and lime—a mistake committed by the architect of the Infirmary.

These overhanging roofs were common as early as the fourteenth century, and continued to form a useful architectural feature from that period until the beginning of the seventeenth, or so long as the walls of houses were constructed of other materials than stone; and I may mention that unless for ecclesiastical edifices, fortified castles, and large manor houses, stone was seldom used, further than foundations, for building purposes, even during the sixteenth century. The walls of houses were then, as well as at a much earlier period, constructed of wood and plaster. The walls, having been constructed in this manner and of these materials, were not, as I think will appear evident to you, so well suited for bearing exposure to the weather as those of stone-built houses. Their architects, on that account, designed a protection for the material, by projecting the roof considerably beyond the outer surface of the wall; but as these projections could not, consistently with other necessary observances in the construction of the building, be made of sufficient extent to shelter a great space underneath, the upper portion of the gable was usually made to overhang the lower; and, in houses of more than one story, the upper one in like manner, and for the same reason projected over the under; so that all these projections which give so picturesque a character to those old timber houses, to which overhanging roofs properly belong, were not, as I trust will now seem obvious to you, designed for ornament only, but for the purpose of protecting the materials of which they were constructed, at same time adding considerably to the interior accommodation. * * *

The proper finish for walls of stone-built houses is a stone cope, moulded and made sufficiently broad to project over the outer surface of the gable wall. When I say that a stone cope is the proper finish for the gable, I mean that although I have been on the look-out for several years for an early example of a stone house with an overhanging roof and gable-boards, I have as yet failed to find one. I will now allude to another unnecessary display of form common to every style of architecture practised in this county during the past sixty or seventy years—I mean false or mock windows. You will not find, on houses that were erected previous to the time when the window-tax was first imposed, any instance of a dumb window having formed a feature of the original design of the building; but ever since that time, and when the daylight was shut out from these old houses, our architects have copied those compulsory mutilations, and placed them as unmeaning blemishes on the faces of our houses; and I can only account to you for the practice by supposing that they have ever since been actuated by an excess of the imitative faculties such as prompted the Chinese tailor to copy the patches on his pattern-garment,—with this difference, however, in favour of the tailor, that while he copied correctly the blemishes, they have increased their number; for it is no uncommon sight to see more mock windows in a modern three-storied house than there were of real windows in any building of the same size before the practice began.

The next building to which I shall direct your attention as an illustration of the existing inconsistencies in modern architecture, is the new infirmary now in course of erection in Dundee. But I must first remark, that proof is afforded in this building of a want of inventive talent amongst architects of the present day. On an appeal to the whole country for designs for a building suited to the purposes of an infirmary, the best produced, at least declared to be so by the unanimous voice of the committee appointed to decide on their merits, is merely an imitation of an English baronial residence of the sixteenth century, and not intended to be carried out in the interior consistently with its exterior form. Those of you who have seen this building will have little difficulty in recollecting that, besides the two long octagonal towers in front, and the usual profusion of gables common to the style, it has two large pretentious towers, one on each of the two sides of the main building. Now, in really old Elizabethan houses, towers were not erected for ornament merely, but were considered necessary additions to the internal accommodation required by the usages and mode of living at that period, and, when finished with flat roofs and parapet walls, as these are, were always provided with stairs, to enable the occupiers of the mansion to avail themselves of the outlook afforded, either for the purposes of defence, or for other uses requiring a satisfactory view of the amusements or exercises going on below. Now, these two towers, standing so prominent, and claiming to be considered principal features in the design of the building, are really of no service, in respect of their not affording any additional useful accommodation suited to the requirements of an infirmary. They are four stories in height. The three first merely serve to prolong the passages beyond where any passage is required, and the fourth storeys, although apparently intended to serve some useful purpose, are not furnished with doors or any openings by which they can be entered, unless through holes in the floors, reached by means of moveable traps or ladders, neither very safe nor suitable stairs, you will admit, for the invalid occupants of an infirmary. Again, I could not discover, during my examination of the construction of the building, any way provided for getting on the flat roofs of these battlemented towers, in case of need. Well, although the front and side walls are surmounted by an embrasured parapet, I found no galleries behind; so that all these expensive parapet walls and flat roofed towers appeared to me to serve only the purpose of preventing a small quantity of snow from falling to the ground as snow—a use, we may safely conclude, that would not have been considered sufficient return for their cost in times when the useful took precedence of the ornamental in architecture.

I shall now proceed to point out a few of those mistakes, or such as appear to me to be so, that have been committed by modern architects in their attempts to imitate that style of architecture so peculiar to Scotland, and which was introduced in the sixteenth century, and formed by combining with the square massive features of the ancient Norman keep or feudal stronghold the crow-stepped gables or turrets common to the lighter and more picturesque architecture of France, and hence called the Franco-Scottish or turretted. Of this style we have several excellent old examples in this county;—Kelly, in this neighbourhood; Careston and Aldbar, near Brechin; and the widely-celebrated Glammiss Castle, so familiarly, although fabulously, associated in our minds with the murder of Malcolm II. of Scotland.

The first building in the style of these old castles, to which I shall direct your attention, as an instance of the want of usefulness in its exterior form, is the newly-erected portion of the County Jail in Forfar. It has flat roofs, surmounted by battlemented parapets, and a bartizan turret at each corner, in imitation of an old feudal castle. Now, as neither these roofs nor turrets can be approached from any part of the interior, and only by a ladder placed on the roof of the lower building, there can be but one opinion as to their usefulness; and even considered as mere imitation of ancient forms, they are not correct in point of size or mode of construction. The old bartizan turrets were placed at the corners, and corbelled or projected out beyond the line of the wall, so as to command a better position for those who required their aid in defending the castle; but these do not project beyond the corner line of the building, and being almost solid, cannot serve any purpose, at least none that will justify the expense of their erection. Those placed on the angle of the court wall, and intended to look like watch-towers, are, if possible, worse in point of usefulness, as they do not serve any conceivable purpose—not being required to do duty as chimney-tops, like some of those on the main building, which, although an occupation suited to our more peaceful times, cannot be considered otherwise than derogatory to the high standing of those to which I understand they claim an imitative relationship, and still to be seen in Aboyne Castle. On one of the windows in the east elevation the architect has placed a crow-stepped gable, no doubt with the view of making it more in keeping with its neighbours the turrets; and in this he has certainly succeeded, as it would be difficult to imagine a more useless piece of masonry than a gable, placed as it is above a window finished of linteled below the top of the wall or the commencement of the slates. Such are frequently seen on modern houses; and if this had been a solitary instance, I should not have directed your attention to it. These remarks on the architecture of the County Jail apply only to the exterior. I am credibly informed that the interior arrangements are well suited for the purposes required, and do great credit to the painstaking talent of the architect.

The only other building to which I will specially allude, by way of showing the useless

ness of modern turrets, is the Mechanics' Institution of Brechin. The whole of that structure, however, belongs more to English than to Scotch architecture, and is by no means decided in its style or character. The centre or principal tower is ecclesiastical, the main building an imitation of an English baronial castle, while the two turrets, one on each side of the projected part of the front, and behind the large tower, are, I am disposed to think, intended for imitations of Scottish corbelled corner turrets, yet the contour of the corbel mouldings is more English than Scotch. These, as well as the slim buttress towers placed at each corner of the centre tower and main building, are all finished with dome-shaped roofs, and have imitation battlemented parapets, and from their foundations to their decorated pinnacles all perfectly solid. There is another feature common to Scotch and English modern castellated buildings to be seen here, in the shape of a black iron-pipe peeping up at the back of the battlemented parapet, ashamed to own that it is a chimney, and unwilling to lessen the dignity of the castle by admitting the existence of a fireplace.

In concluding these remarks on secular architecture, I must request you to bear in mind that real excellence cannot possibly exist unless where, corresponding with the outward display of form, there is found an interior arrangement of the same character; and in order that we may be prepared to judge of what really is excellent in this sense, we ought to examine for ourselves the works of the great Architect of Nature,—take up a tiny shell by the sea-shore, one of the smallest of dwelling-houses erected after His design, but so admirably adapted to the requirements of its occupant, that we will search in vain for unnecessary indentations or projections there.

On ancient churches buttresses were not placed merely for ornament, as the practice of modern architects would lead us to suppose, but for the purpose of strengthening the wall where additional strength was required for the proper construction of the building, and principally against those parts of the side walls where the roof-beams rested, and at the corners, where on any building they are useful. Now, these two buttresses, placed one at each corner of the decorated gable of Erskine Church, do not appear to have been intended to serve any useful purpose. If meant for strengthening the corner, there ought to have been another one placed against the side-wall, and close to the corner. Where there was but one buttress placed, it was made so as to support and strengthen the building. I understand the architect could not, for want of ground room at the east side, place either the one or the other of these; but I really cannot see any good reason why he should have deprived the west corner of its companion buttress, merely to make it match with its mutilated neighbour. This practice of making forms to match is the leading or principal characteristic of modern architecture. It would almost seem as if some architectural law exists, and compels our architects to place on each side of the centre point or portion of their buildings precisely the same forms or objects, whether there does or does not exist a corresponding necessity for their construction. All I shall say regarding this common feature, and perhaps all I have a right to say here, is, that I have not been able to discover the slightest evidence of the existence of any such law having controlled the inventive talent of ancient architects. I have only in conclusion to express an earnest hope that the day is near at hand when our architects will direct more of their attention to the consideration of what is practically needful at the present time, and rely less on the works of those who have gone before them for assistance when constructing our houses; and if I have succeeded in showing you that there exists a necessity for their so doing, to use the words of Buchanan, the historian, "I shall have no reason to repent me of a little labour." If not, yet they who concur not with me in opinion cannot, I believe, disallow or blame my goodwill; and I am so far from judging or taking it ill to have what I have written refuted, that if any man discover greater certainty, and convince me of my mistake, I shall return him great thanks for his pains.

THE "PROTEAN" POWER OF BACON—STEAM (?)

WHETHER what I am about to notice has been noticed for the like purpose before, I know not; but even then, surely the thing itself is worth repeating, and especially as it may be *really new* to many, and of considerable interest to such parties as well.

Be it then known, that, as a poor man, anxious for *rich* knowledge, it has long been one of my habits, in my occasional passages through the streets of London, to show a great partiality for the old book-stalls; and thus many a weighty bargain—weighty in wisdom as well as in paper—have I picked up for really small sums—surprisingly so, now and then.

Lately, too, something of this kind has happened, in the purchase of an odd volume of the "*Augmentis Scientiarum*," or, "The Arrangement and General Survey of Knowledge," by the great originator of our practical philosophy, "Francis Bacon, Baron Verulam." It is one of a pair of volumes (the first) of a translation of this work, made by a Dr. Peter Shaw, and printed just fifty-one years ago, consisting of better than 330 pages; and though the page is not large—the size known as small octavo,—yet is the bargain truly golden: 330 pages of such printed matter, from the mind of the great Lord Bacon—for but sixpence!

Well, yesterday evening, at my supper-time, I was busy at the *Builder*, engaged in that part of the last number which gives so interesting a sketch of the history of steam—of our steamship manufacture, and our steam generating and propelling machinery.

Such, then, was my last evening's book-employ; and now this morning, while taking my bit of breakfast, I am also feeding on the "*Augmentis*," having eaten on nearly to the close of the volume. And here what do I find? Why, these far-reaching, clear-sighted *indications* of that power which now, among the numerous other manifestations of its ever-growing capabilities, is carrying the British sailor, despite of wind or tide, to battle hard with the Russian in the Baltic; and though ostensibly making common cause with the "barbarian" Turk, yet doing so under the ægis of Christianity itself—helping the weaker side, yet at the same time teaching it some softening of its authority, where it otherwise is strong, and the Christian himself has hitherto been compelled to yield the most abject submission to the dominary of the Mahomedan.

But no more of this; and now for the precious slice out of Bacon himself, which goes thus:—"As for chance experiments, these are plainly irrational and wild procedure. . . . . But if reason be joined, so as to show that the like experiment never was attempted, and yet that there is great cause why it should be; then this becomes an excellent instrument, and really enters the bosom of nature. For example, in the *operation of fire* upon natural bodies, it hath hitherto always happened, that either *something flies off*, as *flame or smoke*, in our common fires, or at least that the parts are *locally separated to some distance, as in distillation*, where the *vapour* rises, and the fæces are left behind; but no man hath yet tried *close* distillation. Yet it seems probable, that if the *force of heat may have its action confined in the cavities of a body, without any possibility of loss or escape*, this *Proteus* of matter will be *manacled*, as it were, and forced to undergo numerous transformations, provided only the heat be so moderated and changed, as not to *break the containing vessel*."

Now, the words here put into marked letters certainly convey a remarkably clear conception of that which we now call *steam*—or, as Bacon himself phrased it so much more nobly,—"this *Proteus of matter*," which, to be rendered subservient to the purposes of man in its *vapourous "form,"* was but needed to be judiciously "manacled," so that the "heat," whether generated "as in our common fires," or, "as in *distillation*," be allowed not to "break the *containing vessel*,"—those very "boilers" which are now the main agency of transporting the thundering cannon's mouth to the Baltic and other seas, and many more of which are still being manufactured at home, and not only for the destructive purposes of war, but for our road-travel, as also for working our colossal factory establishments. And our large-minded Lord Chancellor of England saw this all—the *germ* of it, assuredly—some two centuries and a quarter ago; while who knows but the *spirituality* of that great name is even taking cognizance of the results, and then glancing still farther and farther at what is yet to be the issue?

J. D. D.

PROVINCIAL NEWS.

Lincoln.—The new church, or Bede Chapel, attached to St. Anne's Bede Houses, approaches completion. The architect is Mr. Butterfield, who has made the design, which is a plain one, to harmonize with the Bede Houses, the work of the late Mr. Pugin. The design has been carried out by Mr. Charles Ward, of Lincoln, builder. It is of red brick, and covered with Staffordshire tiles, having stone windows, and porch doorway of the Geometrical period, with a carving of the "Presentation in the Temple" over the porch. The bell-turret rises over the chancel-arch to the height of nearly 30 feet, and is octagon on plan, with geometrical openings: it is supplied with a bell, by Mears, of Whitechapel. The interior is fitted up with deal-stained seats in the nave to accommodate about ninety hearers. The chancel-stalls for the Bede women are of oak, as are also the altar-rail and table-frame, with suitable carvings. The roof timbers are wrought and decorated with azure, vermilion, and gold. Texts are distributed upon the walls. Mr. Wm. Mimmack was the artist employed in the decorations. The east windows will shortly be filled with stained glass. The reredos is executed in Minton's encaustic tiles, as are the decorations round the east window, and along the north and south sides of the chancel. The paving in the nave and chancel is of Minton's tiles, with rows of Yorkshire flags.——A memorial to the late Bishop of Lincoln (Dr. Kaye) is proposed; and a meeting was to be held at the Guildhall, on the 6th inst. to determine whether the model suggested by Mr. Westmacott should be adopted.

Louth.—On Thursday in last week a meeting in vestry was held for receiving the report of the Burial Board on the plans, &c. of the chapels and grounds in the intended new cemetery. Designs had been furnished by architects from London, Wales, Boston, and other places, from which the board selected those of Messrs. Bellamy and Hardy, of Lincoln and Louth, architects. It was resolved that 1,350*l.* be voted for erecting chapels, laying out grounds, and other necessary expenses; seconded by H. Allenby, esq. that the sum allowed be 950*l.* which being put to the meeting, the motion was carried by a very large majority; and after a vote of thanks to the mayor for his able and impartial conduct in the chair, the meeting broke up. The designs selected consist of two chapels, with vestries and other conveniences in the Early Decorated style, and a lodge and two entrance gateways in same style. The whole will be executed in white brick, with stone dressings.——Another large chapel, and corresponding schools and vestries, are to be built in Eastgate by the Wesleyan Reformers. The cost is estimated at 3,000*l.*

Lynn.—The south chancel window in St. Nicholas's Chapel, has just been filled with stained glass, to the memory of Mr. Frederick Lane, late town clerk and chapel warden. The subject, which is in eight lights, is the parable of the talents, Matt. c. xxv. commencing with the apportionment of the talents, and finishing with the return of the master, and his commendation of the faithful servant. The series are shown under tabernacle work, and in the tracery are angels in attitudes of praise and joy. Mr. Warrington is the artist.

Taunton.—A meeting of subscribers to the fund for the restoration of the Wellington monument in Somerset, was held here on Wednesday week, Sir P. Acland in the chair. Sir A. Hood presented the report, from which it appeared that 970*l.* had been raised, and 50*l.* more promised, making a total of 1,020*l.* The sum required for the erection of the work was 1,140*l.* The deficiency was therefore 120*l.* and besides, about 80*l.* would be required for

boundary-walls, &c. making a total of 200*l*. To raise the amount it was agreed that a committee of ladies should be appointed.

Rhyl.—Improvements made in this rising town, offer increasing accommodation to expected visitors. The main sewerage is completed, the streets covered, and many portions flagged.

Birmingham.—A committee is in course of formation, for the purpose of making a new attempt to obtain the introduction of the Free Libraries Act into Birmingham. The subject, it is said, will speedily be brought under the notice of the council. In order to strengthen the hands of Mr. Ewart, whose Bill for the amendment of the Act is before Parliament, a petition in its favour is being prepared. Since this was set up, Mr. Ewart's Bill has been thrown out.

Derby.—A new chancel window of stained glass, executed by Messrs. Chance and Co. has lately been presented to St. Paul's church by Mr. John James Simpson, under-sheriff. It is a memorial window to the late Rev. J. M. Pratt, who was incumbent of the church. In the centre light is a full-length figure of St. Paul. The two side-lights are filled with quarries of ground glass, with gold enamelled *fleur-de-lis* in the centre, surrounded by a border. The circular centre piece at the top is filled by a rosette.——At a recent meeting of the Burial Board, it appeared from the minutes of the committee appointed to carry out the works of the new cemetery, that they had called in the services of Mr. H. I. Stevens, architect, and Mr. Barron, of Elvaston, to suggest the best plans for the buildings and for laying out the ground. Mr. Haywood inquired if the board were not going to advertise for plans for the buildings on the new cemetery. He knew several architects that were anxious to send in plans. It was stated that the committee had not yet power to appoint an architect, and Mr. Stevens and Mr. Barron were not appointed. The question of advertising seemed to meet with favourable consideration, but was postponed. Three tenders were received for the drainage of the new cemetery—from Mr. George Thompson, builder, Derby; Mr. Moody, builder, Derby; and Mr. John Walker, builder, Littleover. Mr. Moody's, being considerably higher than either of the others, was not entertained, and a sub-committee was appointed to select from the two remaining tenders. The committee were empowered to accept the lowest tender, taking into consideration the quality of the materials.

Stockport.—The following tenders for alteration of Lancaster-bridge, Stockport, were opened on 23rd ult. by the county magistrates:

Powell, Cheadle	£295
Bertram, Romely	290
Forrester, Stockport	287
Swindells, Romely (accepted)	285

——At a recent meeting of the municipal and parochial authorities, it was resolved—"That, in the opinion of this meeting the Improvement Act, 1837, gives the corporation full powers to make main sewers or arterial draining in any place in the borough which requires this outlet for its draining;—that it is the bounden duty of the corporation, the principal sanitary authority in this borough, to take care that such arterial drainage is provided;—that, therefore, the corporation be respectfully recommended to exercise its powers in the several townships of Stockport, Heaton Norris, Brinnington, Cheadle Bulkeley, and Cheadle Moseley, on the following conditions:—That the corporation shall make the main arterial drain, and borrow money, throwing it over a period of twenty years; that the inhabitants of each township shall repay the corporation one-half the expense of such arterial drainage forthwith; and that the respective boards of surveyors be requested to assist in carrying out this resolution forthwith."

Tunstall.—The first sod has been cut for the main sewers about to be laid down here. The engineer, Mr. Dale, at the ceremony, explained the nature and extent of the works, their desirability, and the great advantage the town may expect from them. The main trunks are 3 feet 6 inches inside diameter, formed of two rims of the blue Staffordshire bricks, set in hydraulic lime, and will be little short of two miles in length, and an average depth of 12 feet, the surface of the grounds giving a very considerable fall. The works are to be completed in eighteen months: they have been laid out, and are to be superintended, by Mr. Thomas Dale. The contract has been taken by Mr. William Forrester, of Stockport, for 25s. 10d. per yard lineal.

Preston.—The workmen employed on the parish church have commenced the alterations in the tower preparatory to the erection of the spire. The chancel floor is laid, and that portion of the new building is so far completed that it is expected to be ready for divine service in little more than a month. The plain glass windows will ultimately be filled with stained ones, presented by the following gentlemen:—Sir Henry Bold Hoghton, Bart. large east end window; two side windows, Mr. E. C. Lowndes; one by Mr. Richard Newsham; one by Mr. John Addison; and one by Mr. John Bairstow. The stained glass which formerly occupied the east window in the old chancel, will also be placed in the side.

Newcastle-upon-Tyne.—Two much-desired improvements have been resolved upon by the council, viz. the Corn Exchange in St. Nicholas-square, and the approaches to the high level bridge. The former will possess a music-hall and other public offices. It will consist of three orders, the chief story being Corinthian. The centre compartments of the façade are three large windows lighting the council-chamber, and the height of two floors. The corn-market will be raised several feet, over which is the music-room, 150 feet long, of the form of a trapezium, the mean width being 75 feet, and the height about 50 feet. Light is admitted through windows whose sills rest upon the entablature of the old market: their height is 8 feet, making altogether 32 feet from the level of the street. This height is obtained partly by the introduction of a gallery in the music-hall, the under-side of which is ceiled, running at an angle of about 45 degrees from the top of the window introduced to the ceiling of the market. The extension of two such lines would meet in the centre of the market, at the height of 15 feet above the level of the floor, which would be a vertical light below the point of concentration. The music-hall is entered at four different points by stone staircases. There will be in connection a large saloon at the entrance to the principal seats in the Cloth-market, besides several retiring-rooms for performers; and at the north end is another large room, 56 feet by 32 feet, for an ordinary on market-days, or a retiring-room for public dinners. The architects are Messrs. Johnston and Knowles.

Panmure. — Extensive improvements and alterations have been for some time in course of progress at Panmure House, the seat of Lord Panmure. A number of tradesmen are employed in and about the works, as also of labourers. The new garden-wall will average about 15 feet in height, but in some places it is nearly 20 feet. There are four vineries, each 20 feet by 20 feet; two peach-houses, 48 feet by 20 feet; an orchard-house, a green-house, and melon and cucumber-houses, with stove, &c. The conservatories are span-roofed, and the melon and cucumber houses extend to 120 feet. A corridor, extending about 280 feet, also span-roofed, runs the entire length of the hothouses, each having an entrance to it. This corridor extends east and west, and is about 6 feet broad. A fruit-room is erected at one end of the garden, and a bath-room at the other. Alterations are making on the house itself. The mason work connected with the house is under the superintendence of Mr. Morrison, of Edinburgh.

SUSPENSION-BRIDGE AT CHELSEA.

We give in our present number a view of the Suspension-bridge over the Thames, at Chelsea, which is now in the course of construction for the Commissioners of her Majesty's Works, under the superintendence of Mr. Page, their engineer. It stands nearly midway between Vauxhall and Battersea-bridges. Some particulars of the construction may be interesting. For the foundations, piles of elm timber, averaging 13 inches square, are driven at intervals of 3 feet, on an average 28 feet below the bed of the river, enclosed by a strong cast-iron casing, 88 feet in length, and 19 feet in width, with curved cutwaters. This iron case consists of piles and plates driven into the bed of the river,—the piles to a depth of 25 feet, and the plates 20 feet below the low-water line. These piles are driven at every 9 feet: the metal is 1 inch thick, and the plates are cast with ribs 6 inches deep, and have projecting pieces arranged to fit into the grooves of the piles: this casing forms the outside of the piers; it rises 7 feet above high water, and is surmounted by a moulded cast-iron curb. From the depth of the piles and plates below the bed of the river it prevents the water ever undermining the foundations. The elm bearing piles, are cut off at a level of 2 feet above low water, and are securely tied together transversely and longitudinally, by iron bars, bolted to every pile. The loose ground between the piles is scooped out, and the entire space filled to the top of the piles, with concrete, consisting of five parts of gravel to one part of blue lias lime: upon this concrete, two layers of thick Yorkshire stone landings are bedded, care being taken that no void is left between the under surface of the bottom layer and the concrete, but that the stones shall bear equally over the whole foundations. This forms the floor upon which the towers of the bridge are to be erected.

The towers, which are being prepared, are of cast-iron columns, 10 inches diameter, firmly braced and tied together, and are to be enclosed in an ornamental casing, partly of wrought and partly of cast iron. The space between the frame-work and the cast-iron casing of the piers and foundations will be filled in solid, with concrete, and upon this will be a layer of Bradford landings forming the floors of the piers. The chains will be carried over the towers on saddles, moving on rollers, 6 inches diameter, placed on a horizontal bed, and secured to the abutments by mooring-stones, from which spring strong brick arches, which sustain the weight of the concrete, forming the interior of the abutments. The mooring-stones likewise bear against the side walls, so that the whole weight of the abutments is made effective in counteracting the pull of the chains. The roadway is to be formed of wrought-iron girders placed transversely at every 8 feet of the bridge suspended to the chains by iron bars 2 inches diameter, and diagonally braced with smaller girders of similar construction, upon which rest the roadway-plates, and upon these the pavement forming the road. The footpaths are to be placed outside the chains, and supported at distances of 8 feet by wrought-iron cantilevers bolted to the transverse girders of the roadway. Between the footpaths and the roadway a wrought-iron girder 6 feet deep, and rising about 3 feet above the roadway, will run the whole length of the bridge, stiffening the roadway, and preventing that tremulous motion to which suspension bridges are so subjected.

On each abutment two ornamental lodges are being built, in character with the architecture of the towers, and will serve as habitations for the toll-men.

In each tower there are staircases leading from the roadway to the piers, which will serve as landing and embarking places for the passengers by the steam boats.

The following are the principal dimensions of the Bridge:—

	Ft.
Length from face to face of the abutments at high-water line	700
Distance from centre to centre of the towers	352
Span of centre opening	348
Deflection of chains	29
Distance between the chains	32
Total width of bridge	47
Headway at the centre of bridge above Trinity high-water mark	21

It will be seen that there is much novelty in the construction of the foundations, and we are not surprised to learn that, since the bridge was commenced, several French and German engineers have visited the works, with a view of adopting in their own countries the method employed.

THE SUSPENSION-BRIDGE ACROSS THE THAMES AT CHELSEA.—Mr. Thomas Page, Engineer.

MANUFACTURE OF GLASS AT ST. HELEN'S.

A LECTURE on glass was delivered lately at St. Helen's, by Mr. R. B. Edmundson. In the course of it, the lecturer said we were told that the first manufactory of flint-glass in England was established in the Savoy House, in the Strand, in 1552. There was also another in Crutched Friars; but it was not till long afterwards that the great improvements which had brought it to the present state of perfection, by the use of oxide of lead and closed pots, were introduced. In 1635, Sir R. Marshall obtained a patent for making glass of this description in consideration of his undertaking to employ pit-coal instead of wood in his furnaces. However, the use of coal was soon found to affect the colour of the metal. This gave rise to closed pots, which were used for the first time for that purpose. It was stated that it was not till 1784 that the metallic oxide was introduced into France, at a small factory at St. Cloud. This appeared to be incorrect, as Blancourt, who wrote in 1690, in his 4th book, not only mentioned it, but showed how to make it, and told us "if we don't work it with great care, no pots or crucibles will hold it, for it will crack them, and run out." Though we were told that flint-glass was not introduced into England until 1552, and window-glass until 1557, this would appear, from a contract spoken of by Horace Walpole, in his "Anecdote of Painting," between the Countess of Warwick and John Prudde, of Westminster, glazier, to be incorrect, and that at least window-glass must have been made at a much earlier date. In this curious treaty, which was dated 1439, "John Prudde was bound to use no glass of England, but glass from beyond the seas." It would be observed that this document, besides showing that the art of making window-glass was known and practised in England in the fifteenth century seemed also to tell us that it was of an inferior quality to that which could be obtained from abroad. Flint-glass works were soon started after this in various parts of the world, one small work by a foreigner, of the name of Lageer, in a narrow street in Gateshead, and another in the close at the opposite side of the Tyne. Both these works were close to the water edge. The latter had been carried on for a great many years under the name of the "Northumberland Glass Company." Several others were commenced in and about Newcastle at the beginning of the present century. He would name one, in particular, because it brought flint-glass for the first time into St. Helen's. This was situated on the east side of the town, and near to the river side. With these works Mr. Bell was at one time connected. About 1820, started the Ravenhead flint-glass works. These then appeared to be the first flint-glass works in St. Helen's.

The following table shows the wages paid, the coal used in the manufacture, and the weight of the material made per week, at the three plate works in the neighbourhood, viz.:—Pocket Nook, Ravenhead, and Sutton Plate works:—

Weekly.—77,000 superficial feet; 203 tons weight; 1,670 tons of coals; 1,750*l.* wages.

Annually.—4,004,000 superficial feet; 10,556 tons weight; 86,840 tons of coal; 91,000*l.* wages.

The following table shows the quantity of glass made, coal consumed, and wages paid, weekly and annually, by the Messrs. Pilkington:—

Weekly.—Rolled plate, 15,000 feet; weight, 45,000 lbs. or 20 tons, 1 cwt. 3 qrs. 4 lbs. Crown, 12,400 tables; weight, 161,200 lbs. or 71 tons 19 cwt. 1 qr. 4 lbs. Superficial contents, 148,800 feet. Sheets, 9,800; weight, 132,300 lbs. or 54 tons 12 cwt. 0 qrs. 16 lbs. Superficial contents, 88,200 feet. Shades and miscellaneous articles, 3,500 articles; weight, 10,500 lbs. or 4 tons 13 cwt. 3 qrs. 0 lbs. Weekly summary, 150 tons 6 cwt. 3 qrs. 24 lbs. Number of feet, 252,000.

Yearly.—Rolled plate, 78,000 feet; weight, 2,340,000 lbs. or 1,044 tons 12 cwt. 3 qrs. 12 lbs. Crown, 644,800 tables; weight, 8,382,400 lbs. or 3,742 tons 3 cwt. 3 qrs. 12 lbs. Superficial contents, 7,737,600 feet. Sheets, 509,600; weight 6,879,600 lbs. or 3,071 tons 5 cwt. Superficial contents, 4,586,400 feet. Shades and miscellaneous articles, 182,000 articles; weight, 546,000 lbs. or 243 tons 15 cwt. Yearly summary, 8,101 tons 15 cwt. 2 qrs. 24 lbs. Number of feet, 13,104,000.

The Messrs. Pilkington employ 1,350 hands in all. The coals consumed weekly, 1,700 tons, or, annually, 88,400 tons; and pay in wages, 1,050*l.* weekly, or annually, 56,600*l.* At the whole of the flint glass-works the hands employed were 280; glass made in tons, weekly, 41, or annually 2,132; coal used weekly, 190 tons, or annually, 9,880; wages paid weekly 244*l.* or annually, 12,688*l.* At the whole of the bottle-works the number of hands employed is 97; weight of glass made weekly, 28 tons, or annually, 1,456 tons.; coals used weekly, 150 tons, or annually, 7,800 tons; and the wages paid weekly, 150*l.* or annually, 5,400*l.* The whole of the glass manufacturers employ 4,077 hands; use 3,710 tons of coal weekly, or 192,920 annually; and pay in wages, 3,099*l.* weekly, or the large sum of 161,148*l.* annually. He observed that at the rate the Messrs. P. were manufacturing glass, from computation he had made, they would be able to make a band of glass, a foot wide, to encircle the earth in nine years.

BUILDERS IN BRIGHTON.

A FEW days ago I had occasion to visit Brighton, and to sleep there. On the following morning I rose early to return to town by the express-train, and finding I had full an hour to spare, I rambled about, looking at some few of the buildings now in progress.

There are several new houses being erected, some with one, and others with two and three floors above the ground-floor: most of them are erected in no style of architecture, unless it is a bad style: however, with this I will not quarrel, the architects (or, stay, there can be no architects)—the builders or owners have a right to please themselves, and adopt their own fancy ideas as to the style: with this the observer has no right to interfere; but he has a right, as one of the *public*, to express his disapprobation, if, in his opinion, the construction is faulty, inasmuch as circumstances may compel him some day to be an inhabitant of any one of the houses which casually may have met with his disapprobation, as in my own case. To while away an hour or more I looked at some of the buildings now in progress, and viewed with great regret the scamping way in which a great number of them were being built. The scaffoldings were by no means safely constructed—the scaffold-poles not only very slight, but the hitches very ignorantly passed round the poles: one would think that a workman would have regard for his own neck, if he had no regard for that of others. How many accidents occur from an ill-constructed scaffolding? However, to pass on from bad to worse: the buildings were chiefly built of brick, and one of the most *essential cautions* had been entirely neglected. The bricks were put together without either English, Flemish, or any other bond, and *joint over joint* for six or seven courses high: this repeatedly; mortar joints nearly three-quarters of an inch in thickness; and "bats" worked in out of number; indeed, a "stretcher" was a rarity. Over each opening there were *false* arches (although this defect is very general in other places as well as in Brighton), with their skewbacks bearing upon the lintels, instead of being quite free of them. One thing I am happy to say is, that the mortar looked pretty good.

Had the builders made up their minds to act contrary to the general clause in an architect's specifications, under the heading of "Bricklayer;" *i.e.* "no excess of *bats*, nor false arches, nor bad bond, nor bad workmanship of any kind will be allowed," I could only say that they had been most successful in their endeavours to do so, and have fatally avoided putting together the materials "in an honourable and scientific manner."

The real secret of this scamping way of building lies in the fact of the walls being afterwards rendered on the outside with stucco, "*the coat that covereth a multitude of sins.*" A few good country dances on the one-pair floor will, in my belief, give the builders, one of these days, a lesson not to scamp again. Should at any time my practice lead me to Brighton, I should certainly make a more than *ordinary* inquiry as to the respectability of the builder or builders that might wish to compete; and I strongly urge this caution to any brother architect whose profession may call him that way. Far be it from my intention to denounce all the builders of Brighton and its neighbourhood, for there are no doubt many respectable builders in Brighton, men who will deal honestly with their employers and with themselves: such men are to be respected; but for the builders and the workmen of such houses as herein condemned by me, neither I nor anybody else can have any respect for them. EDWARD C. S. BLAKE.

THE CITY MEMORIAL OF THE DUKE OF WELLINGTON.

IT will be remembered that in the first competition, Messrs. Adams, Bell, Behnes, Foley, R. Smith, and Evan Thomas were selected to submit fresh designs, each sculptor receiving a certain sum of money. The designs thus obtained have been before the committee and the court for some time, and the result is that Mr. John Bell is named to execute the memorial. This will serve in some degree to solace Mr. Bell for the disappointment and annoyance at Manchester. We understand that the remarks we made on his first design have not been lost sight of in the preparation of the model which has succeeded. There is every reason to believe from the sculptor's honourable antecedents that he will produce a work worthy of the occasion and the age.

A BRIEF FOR THE CONFISCATED CITY CHURCHES.

"Sarmatia fell unwept, without a crime."

IT may not be extensively remembered, that about twenty years ago some ecclesio-clasts, but not then of clerical character, planned to demolish about twenty city churches—to reduce some of the finest works of Sir Christopher Wren to old materials and rubbish; and, in their good taste and mercy, to include St. Stephen's, Walbrook! Public indignation, and appeals from some parishes, especially All-Hallows, Thames-street, checked *that* Vandalism, and the idea was buried in ignominious silence.

As the revival of that would quite as little now be borne, we are threatened with their *removal*—to suburban parishes. For, vested rights might render their "squatting" in the midst of populous metropolitan districts, rather too expensive. And what is the fault found with these hardly-used temples,—that they are awkward and unpicturesque where they are—that they "stop the way" architecturally or religiously, or are at all inconvenient to congregations in their present position? No such thing. It is a case of simple neglected merit. And for that, "sentence of death" must be "recorded" against their cure rank, and they must be banished for the rest of their lives to ungenial regions.

Or is the City thought so pagan, that they must be taken out of it, like second "Elgin marbles," to some more civilised and appreciatory communities? Shade of Sir Christopher! who built them not only where, but *for* where they now stand; who didst thy best in thy long life for the ornamenting a city of many churches;—arise, and, with a tear down thy manly cheek, protest against the "hard lines," on which thy respect now has fallen!

What would many buildings be without their "associations?" Where would "St. Helen's" and "St. Catharine Cree,"—one of the first semi-Roman churches (Charles I.) be, so well as they are now? Would anybody like to see Caernarvon Castle removed, and "re-erected," as a lounge, in Hyde-park?

The injury to the general appearance of the city, both on land and when viewed from the water, is one great objection. And, for example, let any one standing before the Mansion-house, and looking at one of the most insignificant—that near the corner of the Poultry (St. Mildred's), ask his own taste, whether something

picturesque would not be taken away from the scene? And what is to become of the "Forest of Spires" seen from the Thames—our own pleasure, and our boast too, and admitted by foreigners? The lofty spire of St. Gabriel, Fenchurch-street, above 200 feet — the high tower of Aldermary, only second to Cornhill—and a number of others, all "telling" more or less, gone where, in future, they will be only viewed singly. P.

ARCHITECTS AND THEIR RESPONSIBILITIES.

As this question is becoming a very serious one, the more the difficulties which attend it are known, the better they may be discussed. I send you a brief account of what lately happened to me in my practice.

I was called upon to superintend the pulling down and rebuilding of a party-wall in a building of mixed character, which had been very properly objected to by the district surveyor. After having all the floors and roof safely shored up from bottom to top, the wall was taken down to the level of the ground. I then directed that the workmen should excavate a *short length* of trench to form concrete foundation, and that this should be soundly filled up before any further excavation should be made, and also that the trench itself should be strutted (with planks on each side), to keep the ground from yielding by the weight of the shores. This matter happened to be in my own immediate neighbourhood, and the case being somewhat "critical," I visited the premises at an early hour in the morning to satisfy myself how far my directions had been attended to. The master builder was not there—his foreman was not there—the bricklayer even was not there,—but a couple of labourers were busily employed in excavating the *whole length of the trench, and neither planks nor struts were provided*, nor had the carpenter been sent to for them. In another hour it is my confident impression that, but for my timely interference, the whole would have come down with a crash, and probably some life or lives been lost. Now, had this been the case, could it have been considered the fault of the architect (who might have been called out of town)? Surely not, if he had used every reasonable precaution. Was it the builder's? His answer would have been, that he had sent a very competent workman as a bricklayer. This was true, but the morning was wet, and he was "drying" himself elsewhere. Who would then have been to blame? In my mind the best way is neither to claim nor disclaim individual responsibility, but admit it fully to this extent, viz.—that morally, every man, from the employer down to the operative, is mutually liable,—the architect to the employer, for the builder he engages; the builder to the architect, for the workmen he sends; the workmen to their master, for keeping him out of trouble; and the employer to the public, for the architect he retains. This would go some way to establish a better fraternity among modern Freemasons, and give the utmost security to each other, and to the public. J. T.

PLAIN TILE COVERINGS.

As there are now several large reservoirs in course of construction in different parts of the country for sanitary purposes, and which are mostly being covered in with brick, I do not think I shall be much out of place in calling your attention to a few remarks upon plain tiles, which I think quite as good, much cheaper, and less weighty than brick arches. I was recommended to try them by the late Mr. Culyer as a covering over a coal-store of a gas-work with which I am connected, the upper part of which we wished to make use of as a reservoir to catch all the rain-water from the other buildings. Our store is 35 feet long by 12 feet wide in clear. We first turned two 9-inch hollow brick arches, and one 9-inch hollow brick beam across, thereby dividing it into four open bays, which we then covered in with three courses of plain tiles laid in Portland cement, herring-bone fashion; interspersed with hooping bond. The walls are of an average thickness of 14 inches, and carried 2 feet 6 inches above. The whole arches, tiles, cement sufficient to build a 4½-inch wall all round, the 2½ feet high, plastering, labour, and all complete, cost a trifle less than 4*l.* per square of 100 feet during our last dear season. I have every reason to think that this tank bottom would carry twice the quantity or weight which we can put on it,—a load equal to nearly or quite thirty tons. We had twenty-two or twenty-three people on the top within a week of the completion, some heavy men. I think this rather a severe trial when barely dry and set. This is intended to have two or three coats of coal-tar put on hot. There are a number of purposes for which a covering of this description might be used. I have heard many complain they cannot have water closets because of the expense of force-pumps, &c.; now all can if they like, without pumps being required. A tank of the above description, to hold 150 or 200 gallons, which they can catch from the roof of any house, however small, instead of letting it, as now, in many cases run to waste, would be quite sufficient.

T. J. Rickon.

CONSTRUCTION OF HOLLOW WALLS.

As dry walls to a house are so important, and as both brick and stone are often very pervious to wet, it may be interesting to the readers of the *Builder* to learn what plan for the construction of hollow walls is most to be recommended. The only method yet practised to prevent completely the percolation of water from the outer surface to the inner surface is by the use of iron stays, the two ends of which are built into the outer and inner walls respectively, and the middle part is bent downwards, so that water cannot follow the course of the iron, but must drop to the bottom of the cavity between the walls: these stays connect the two walls so that they form one firm wall.

In the case of a large house which is to be built externally of the Sussex sandstone, which is very porous, it is proposed to build the walls hollow; on the inside 12 or 9 inches of brickwork, and on the outside 9 inches only of stone, leaving 3 inches cavity; bonding the brickwork and stonework together by stones of about 17 inches wide. Now, it is a question whether by coating the bondstones with pitch, where they form the connection with the inner wall, the moisture collected by the external wall can be prevented from running through into the inside wall. If so, there is no necessity to use iron stays, the durability of which must be questionable. Prevention.

NOTES AND INQUIRIES.

ARCHITECTURAL AND ARTISTICAL.

Iron and Water.—In answer to your correspondent "W. L.'s" query as to some means of preventing the peroxyde deposit in iron hot-water pipes, I may state that in the boilers of locomotives (where this deposit is very considerable and highly injurious), *molasses* has been put into the water in small quantities, and is said to have removed the evil,—but how this method would answer in a bath I cannot say.

Palladio.

SURVEYORS AND SPECULATIVE BUILDERS.

Lay *v.* Kempshaw.—This action in Marylebone County Court was brought by a surveyor to recover 37*l.* 10*s.* of the defendant, who is a publican and speculative builder.

Mr. Lay stated that in 1853 the defendant instructed him to erect a portico; after which he was engaged to make out drawings, let houses, and to superintend the building of defendant's houses. He was as surveyor and clerk of the works, on defendant's building premises early and late, daily. Always understood that he gave defendant every satisfaction, and Mr. Kempshaw had invariably spoken of him and treated him with the greatest kindness. Sometimes the defendant interfered in the operations going on at the buildings. A number of workmen were employed, and witness saw that they did their work as mechanics. It was not usual for architects to perform the multifarious duties witness did. He had to attend the Commissioners of Sewers, the road trusts, and had supplied each board with drawings. Had been an architect and surveyor all his lifetime. The charges made were moderate and fair. In cross-examination.—It was the custom of witness's profession to charge five per cent. on the outlay (book prices). Had not charged at this rate in the present instance. The two houses witness superintended for defendant cost 800*l.* but he (plaintiff) had only put them down for 750*l.* The specifications he made were for labour, not materials. Has charged five per cent. on 750*l.* only. Was dismissed before they were completed, but they were in full carcass, and the interior work was nearly done. Does not know the reason of his dismissal. Defendant did not complain to witness about the drains being above the floor. Defendant complained about the brickwork being covered over. More was done than was necessary through Mr. Kempshaw's interference. In digging out the foundation the defendant gave directions contrary to his. Some of the flooring was wrong. In consequence of a complaint the Commissioners of Sewers sent their officers to inspect the drains.

Mr. J. Pennington, surveyor, deposed to viewing the houses in question, 1 and 2, Kempshaw-terrace, Kilburn, and to looking through the items of plaintiff's account. He considers the charges very moderate.

Mr. Brown, bricklayer, said he contracted with defendant for labour to the amount of 68*l.* 9*s.* Mr. Lay was on the works morning and night, and measured up witness's work.

Cross-examined by Mr. Bignell.—The drains put in under Mr. Lay's superintendence had all to come up again. They were lower than the sewers, and had to come up because water would not run up-hill. Heard Mr. Kempshaw complain about Mr. Lay's inattention to his interests.

Other witnesses having been examined,

Mr. Bignell, for defendant, said the answer to the action was, that the buildings, when the plaintiff was dismissed, were not worth 750*l.* the sum plaintiff charged commission for, nor did their value amount to anything like 500*l.* Whatever the value of the houses were, his client was willing to pay five per cent. on that amount, and which, according to his client's valuation would come to 32*l.* and their set-off of 14*l.* 4*s.* 4*d.* would, deducted from this, leave the amount paid into court.

Mr. Kempshaw stated that he discharged the plaintiff on account of his bad management. He complained to him about burying 2½ rods of brickwork, and he threatened to make away with himself. Plaintiff's drains went 2 feet below the sewers. They were obliged to cut away the fireplace to make headway. Plaintiff had taken one of the houses for himself, and for this house he had ordered plate-glass for his windows, and mahogany for other parts of the house, and other expensive materials which were not required. When witness discharged him he had not expended 400*l.* on the houses. When finished they would cost about 700*l.* In cross-examination.—The houses were not yet finished. Had not yet fixed their rental. They would not let for 100*l.* a year each. Had asked a party 100*l.* for the rent of one. Mr. Lay was to pay 50*l.* a year rent for one. Is no scholar. Bought timber to build them at the sale of the Hippodrome for 74*l.* enough to build four houses. Was offered 100*l.* for his purchase.

Mr. Worthington was called to prove that in conversation he had with plaintiff, he told him (witness) that the houses would not cost 500*l.*; and that they were not substantially built, and the timber was of an inferior description.

Mr. Keene (for plaintiff), in reply, observed that this was one of those cases in which professional men had to suffer from the interference of ignorant principals. The defendant, Kempshaw, who knew no more of building than he did of letters, had thought fit to give contrary directions to those laid down by his surveyor; and the natural consequence was that the drains were not on a level with the sewers, and some of the brickwork got buried through the deep foundations sunk, through the defendant's orders. Finding these evils to result from his ignorant interference, the defendant threw all the blame upon a gentleman well versed in all matters relating to buildings, and had thought fit to refuse payment for his services. With respect to the value of the houses, it was preposterous to suppose that they were not worth 750*l.* when defendant acknowledged to asking 150*l.* a year rent for the two. His client had produced the evidence of Mr. Pennington, a surveyor of high standing, and who had very fairly stated that the charges were moderate. The defendant, on the other hand, had not thought it desirable to bring forward rebutting testimony as to surveyors' valuation, but relied upon his own opinions, backed by his ignorance of figures or of a foot-rule. He urged upon the Court that the plaintiff was fully entitled to the amount claimed.

The Judge (Adolphus) said he did not think the case was made out. He was not sure whether the plaintiff's being discharged for negligence and for damages arising from such, as was deposed to, did not

bar any claim upon the defendant. He must give a verdict for the defendant, and with costs.

Since this decision, Mr. Keene moved for a new trial, on the grounds of the verdict being unsupported by evidence; and further, that professional men did not come under the same category as domestic servants, who could not recover for wages when dismissed for improper conduct.

A rather warm discussion took place between the judge and Mr. Keene respecting the view taken by the court, and the judge took time to consider the motion; since which, his Honour gave judgment, by refusing the application for a new trial, with costs.

ARCHITECTS' ASSISTANTS.

ALLOW me to ask your sympathy in behalf of the assistants of the architectural profession. Persons engaged in the executive department throughout the metropolis have for some time past made it a rule for their men to leave their employment at an earlier hour on Saturdays. The same may be said of many of the mercantile houses in the City. And why should not the same privilege be extended to the architects' assistants, who are mostly confined in offices for eight or nine hours per diem, and who would be only too happy to avail themselves of the opportunity which would be afforded them for recreation and improvement both of body and mind, if the time for closing architects' offices on Saturdays could be fixed at one o'clock p.m.? and thus during the long days a few hours would be afforded them for professional improvement in the ways you have at times so wisely suggested. SET SQUARE.

AMERICAN PATENTS.

The following are taken from the list for January, 1854, published in the *Journal of the Franklin Institute of Pennsylvania*:—For an Improved Mode of Fixing Likenesses in Monuments: Wm. Boyd, Garrettsville, Ohio. Claim.—"Combining with a monument or grave-stone, a case, having a concave mirror set in the back part, and having also within it a miniature likeness of the deceased, which may be kept secure from the action of the weather, or from liability to receive other injury, said miniature being attached to the cover of the case in such way that by opening the cover, the likeness may be viewed by reflection in the mirror, substantially in the manner set forth." For an Improved Mortising Chisel: J. W. McGaffey, Philadelphia, Pennsylvania. Claim.—"Having two cutting lips inserted in a slot or recess in the lower end of a stock, said lips working upon pins which pass through the stock. The inner surfaces of the lips being constructed as shown, and having a tongue working between them, which tongue, when the chisel is raised, forces apart the cutting edges of the lips, and throws out the chip from between the said lips; the cross-bar of the tongue, when the chisel descends, throwing apart the upper portions of the lips, and closing the lower and cutting ends, the tongue being raised between the lips by means of the spring, or its equivalent." For an Improvement in Mortising Machines: Hezekiah B. Smith, Lowell, Mass. Claim.—"The combination for reversing the chisel, by power applied by friction (with band, or otherwise) and stops, operated so as to stop the chisel when reversed, in the manner essentially as set forth." For an Improved Mortising Machine: Jacob E. Brown and Stephen S. Bartlett, Woonsocket, Rhode Island. Claim.—"Operating the chisel by the graduated conical cam, in combination with mechanism described, or its equivalent, which enables the operator to vary the length of the stroke made by the chisel while it is in operation, or suspend its motion at pleasure, without disconnecting the driving power applied to operate the machine." For an Improvement in Machinery for Mortising Frames for Window Blinds: D. M. Cummings, North Enfield, New Hampshire. Claim.—"The moveable platform, spacing gauge, and oblique ways, when combined and arranged with each other, and with the adjustable gauge bits, &c. or their equivalents, in such a manner that the mortises formed will be exactly equi-distant from each other, and also, in such a manner that any desired degree of inclination may be given to said mortises, substantially as herein set forth; disclaiming the use of the said moveable platform, save when employed in combination with the spacing gauge and oblique ways, as set forth." For an Improved Machine for Making Window Blinds: Moses C. Stiles and Tristrum S. Lewis, Hollis, Maine. Claim.—"We do not claim the cutter, chisel, or any part of the machine, separately; but what we do claim is, the combination of the cutter and chisel, worked simultaneously by the foot of the operator, or by other power, in the manner and for the purposes set forth." For a Spiral or Worm-Joint Hinge: Perry G. Bates, Waterbury, Connecticut. Claim.—"The spiral or worm-joint hinge, constructed as described."

Miscellanea.

KILKENNY AND SOUTH-EAST OF IRELAND ARCHÆOLOGICAL SOCIETY.—The March meeting of this society was held on Wednesday week, when a whole constellation of new members, headed by Lord Rosse himself, were proposed and elected. The secretary then laid on the table the printed Transactions for 1852, with numerous illustrations, and announced that the part for 1853 will also shortly be ready. The first instalment of the society's publications for 1854, under an expedited arrangement, was also produced. Various presentations to the library and museum were then made, and papers read on Sligo Antiquities, "Giants' Cinders," the Archæological Court of the Irish Exhibition, the Old Kilkenny Canal, and St. Patrick's Money. By the new arrangements, members may obtain the full proceedings of each meeting in as short a time as possible after they take place.

THE IRON TRADE.—The quarterly meeting masters met in great force to resist any attempt by speculators to raise prices, and it was resolved that no advance should be made: indeed, the actual prices have rather shown a tendency in the contrary direction. The nominal prices, therefore, per ton are still 10*l.* for bars,; 11*l.* for hoops; and 12*l.* for sheets. Pigs are looking up,—for hot or cold blast respectively, 5*l.* and 5*l.* 15*s.* There is a falling off in the foreign markets, but a steady home trade, especially for marine purposes. The total exports from the United Kingdom in 1852, have been stated as follows:—Pig-iron, 240,491 tons; bars and rails, 548,996 tons; rods, 18,696 tons = 808,183 tons. Of which there were shipped to the United States—Pig-iron, 104,230 tons; bars and rails, 334,224 tons; rods, 1,439 tons = 439,893 tons; leaving 368,290 tons for the requirements of the rest of the world.——New iron works have been founded in South Durham as well as in North Yorkshire, for the working of the Cleveland iron stone. The Mersey Steel and Iron Company's new works, at Liverpool, were opened on Saturday in last week, with a dinner for 500 persons, principally those employed about the works.

NORWICH SCHOOL OF DESIGN.—A general meeting of the subscribers of this institution was held on Monday in last week, when office bearers were appointed, and the chairman explained the reasons which had led to the recommendation, on the part of the committee, to the Board in London, to remove Mr. Heaviside from the office of master. From this explanation it appeared that there was no specific charge against him, but that he was "eccentric and impracticable" in his conduct, so much so that the committee could not work with him; and had also given great dissatisfaction in the school by favouritism to particular pupils. These explanations were deemed satisfactory, and the proceedings terminated.

LIVERPOOL TIMBER MARKET.—A broken cargo of Quebec pine, 45 feet average, has been sold to the trade at 2*s.* per foot from the yard. Of St. John the only parcel landing is being yarded, and is held for 10*d.* per foot over the average girth, or for 18-inch, 2*s.* 4*d.* per foot. Three cargoes of Baltic timber, of good quality, have changed hands at 2*s.* 6*d.* per foot. Of the cargoes of deals recently arrived two have been sold from the quay; one of pine and spruce mixed at 13*l.* 4*s.* 3*d.* round, and the other, with less pine, at 13*l.* per std. being equal to an advance on the previous sales of 20*s.* to 25*s.* per std. The still low price of deals, compared with that of timber in the log, will ensure a demand for this description of wood, and the stop to the supply from the Baltic, which last year was 1,326,325 loads, against 1,204,629 loads colonial, or equal to 59 of the whole supply, is materially enhancing the value of present stocks.

INDUSTRIAL TRAINING IN WORKHOUSES.—The Irish workhouses had above 1,000 acres of land under cultivation at Michaelmas last, either wholly or partially, by the boys in the workhouses, the number of boys so employed being 3,783; and 3,196 boys were being instructed in trades, as tailors, shoemakers, and the like. The whole number of boys (between nine and fifteen) in the workhouses was 12,320; of girls, 14,273. Of the girls, 9,166 were under industrial training. The instruction occupies four or five hours a day. During the previous year above 5,000 boys and girls obtained employment outside their workhouses.

BUILDING REGULATIONS AT RUGBY.—A petition, by the builders of Rugby, is said to have been presented to the Local Board of Health, requesting the board to reconsider a resolution that the party walls of houses be carried up past the slates, and representing that without this the walls would be as effectual for the prevention of fire, and the cost of building very considerably lessened. Surely there is some mistake in this report: we cannot believe that the Rugby builders have made any such representation. The matter, it is added, was ordered to stand over till next meeting of the board.

STRIKES, &c.—It appears that the skilled workmen at the Crystal Palace, Sydenham, who have been receiving 6*s.* a day for ten hours' labour, and were carried on the rail to and from work for 9*d.* a week, have struck for "nine hours a day and no surrender." A printed notice was issued to the effect that the demand could not be entertained. The directors expected that the inconvenience would be but temporary.——A large number of the journeymen joiners of Hull lately struck work. They required an addition of 6*d.* a day, besides some alteration in the time of working. The masters resisted the application: bad trade and the increased price of materials, they said, did not justify such an advance.——A recent difference between the master joiners of Hawick and their workmen lately assumed a more serious aspect. Eleven of the employers having combined to resist the demand of the workmen, they adopted a resolution somewhat similar to one adopted by the Edinburgh masters, contending that there was no reason for a rise of wages at present, and that, therefore, they who were dissatisfied and left their work would have no chance of obtaining employment in the locality, as they were determined to adhere to their resolution. A number of the workmen have already left, as they consider the wages lower in Hawick than in other towns. The average wage here is 17*s.* per week, not 1*l.* as was elsewhere reported. The men have asked 1*l.* which has been refused.——The master joiners of Selkirk held a meeting on Saturday week, at which it was agreed to grant the request of their workmen to shorten the hours of labour from sixty to fifty-seven per week.——The journeymen joiners, masons, plumbers, and slaters of Galashiels have come to an amicable arrangement with the masters for a reduction of three hours on Saturday afternoon (thus bringing the week to fifty-seven hours) at the same weekly wage as hitherto, with the exception of the joiners, who receive a shilling advance, making their weekly wage 1*l.*——In consequence of a representation to the Arbroath master painters, the journeymen have received an advance of two shillings a week on their former wages.

ARCHITECTS' CHARGES.—*In causa*, Norton and Another *v.* Blanckensee, at the Birmingham County Court, reported at some length in the local *Journal* plaintiffs were architects and surveyors, in Birmingham, and defendant, a merchant, of same place. The action was brought to recover 78*l.* for professional services rendered by plaintiffs, father and son, to defendant—the principal item, 58*l.* 16*s.* being charges for superintendence in erection and finishing of eight front houses, six back houses, and two shops, situated in Wrottesley-street, a new thoroughfare leading out of Smallbrook-street. Defendant, "in case it should be considered plaintiff had performed the duties of a superintending architect or clerk of works, and that he was entitled to the usual 2½ per cent." had paid into court 33*l.* namely, 28*l.* for per centage, and 5*l.* for other charges. For plaintiffs, Mr. J. W. Hornblower, Mr. S. Briggs, and Mr. Lee, were called, and deposed that, in their opinion, the charge of 58*l.* 16*s.* was not an unreasonable one. After other evidence was given on both sides, the jury returned a verdict, finding the plaintiff was entitled to 2½ per cent. on the outlay, namely, 28*l.*; and as 33*l.* had been paid into court, the verdict was entered for defendant.

THE DAY OF HUMILIATION.—It is announced that we are to have a day of humiliation and prayer on account of the war. Whatever else this may mean, I presume it will involve a total cessation from business. In this case all persons who are paid according to the number of hours they work will lose one-sixth of their weekly wages, whilst all those possessed of a yearly income or salaries will lose only a day's work, about which there will be very little indignant correspondence. I do not profess any very profound comprehension of the theory of these matters, but I cannot imagine that it is in any way contemplated that one class of the community should make sacrifices which the others do not, nor can I believe that it is intended that the working classes generally should have this self-inflicted foretaste of the hardships and the burdens which, for the sake of the freedom and happiness of their children and their children's children, they will assuredly before long have to endure. The remedy is so simple, that I hope you will not only suggest it to that numerous class of your readers who are employers of labour, but urge it upon them as an act of justice which they are bound to do: by giving their men the option of making up the day so lost by an extra hour every day for a fortnight, or two hours per day for a week, neither party would suffer any pecuniary loss.—B. H.

THE ST. MARGARET'S ESTATE, RICHMOND, is to be allotted on the 7th June. It contains 75 acres on the banks of the Thames, purchased of Lord Kilmorey, by the Conservative Land Society. Something is said of the erection of a new station at St. Margaret's, between Richmond and Twickenham stations. It is intended to preserve the mansion if possible.

Society of Antiquaries of Scotland.—A meeting of this society was held at Edinburgh on Monday in last week. A paper was read on the coinage of Ceylon during the thirteenth and fourteenth centuries, by Dr. W. H. Scott. Dr. Beddoe, Fellow of the Ethnological Society of London, then read a paper on Scottish ethnology. Mr. John Stuart read a notice of an "eirde" house, or underground chamber, recently discovered in the parish of Tarland, Aberdeenshire. Numerous donations to the museum and library were laid on the table.

Omnibuses for Tradesmen.—If a spirited company would take this matter up, much good might be done. I rode to-day in *three busses, and they were not half full;* because the fares are too high, and the deception too frequent. I suspect these omnibus proprietors will not see their interest until the new light brings the air and water carriages upon the road, and then good-bye to omnibuses.—T.

Restricted Liability in Partnerships.—An important debate, extending over three days, has occupied the attention of the Liverpool Chamber of Commerce on this subject. The council of the chamber had adopted a resolution recommending a change in the law, so as to legalize limited liability partnerships. The result of the debate is, the adoption of the council's proposition by a majority of twenty-seven to eighteen. The question, however, is deemed so important, that a poll is to be taken after the publication of the discussion.

Sale of the Attwood Estates.—The estates of Mr. John Attwood, consisting of farms and houses at Harwich, and the mansion and domain of Hylands, have been offered for sale and partly sold. The first day's sale, on Tuesday in last week, comprised a part of the property at Harwich. Twenty lots were sold, including "Holly Lodge" mansion, Dovercourt, for 2,600*l.*; and Dovercourt Hall Farm, for 2,150*l.* Brookman's Farm, house, homestead, and 83a. 0r. 11p. in Dovercourt, was sold for 2,200*l.* The Hylands estate was offered on Wednesday. After some delay, a gentleman bid 150,000*l.* No other bidding was made. Mr. Beadel said, the lowest price he was instructed to sell at was 240,000*l.* If not disposed of by private contract, the estate will be shortly cut up into lots. For the remainder of the farms and houses at Dovercourt and Harwich the biddings were very spirited; property in that district, it would appear, standing high in public favour, there being a struggle to secure the various lots, which it was considered realized enormous prices. The "Toll Gate Farm," Dovercourt, house, homestead, and 38a. 2r. 36p. let at 92*l.* 10s.; copyhold; sold for 2,000*l.* "Dove House Farm," Ramsey, house, homestead, and 26a. 0r. 38p. let at 57*l.* 10s.; copyhold; sold for 2,050*l.* Residence, Ramsey, in hand, and two fields, let at 28*l.*; leasehold for 999 years from 1678, at peppercorn rent; sold for 700*l.* Ditto, ditto, near Toll Gate Farmhouse, let at 20*l.*; sold for 440*l.* Two enclosures, "Upper and Lower Clays," 14a. 3r. 3p. Dovercourt, held at 29*l.*; copyhold; sold for 800*l.*

Discovery of Roman Remains.—There have been lately discovered in some gardens near Nerac (Lot-et-Garonne) a number of Roman mosaics representing birds, fruits, fishes, flowers, and arabesques. They are considered to belong to the era of Julius Cæsar, and are supposed to have been used in the palace of one of his pro-consuls. A local tradition declares that they were discovered a first time in the thirteenth century, and employed by the Templars in a magnificent commandery which they had built on the site now occupied by the gardens mentioned above. That building, the traditions state, was burnt down in about a century after, and human skeletons, charcoal and burnt matters of various kinds lately found on the spot, seem to give some countenance to the story. A part of the mosaics were purchased by a gentleman residing in the neighbourhood to adorn his country-seat, and the rest have been offered for sale.

The St. Katherine Docks.—A new warehouse for housing foreign goods in bond, has been completed. It is believed to be the largest and most complete building of the kind in the country, and has an imposing appearance from its magnitude.

Waterproofing of Railway Arches.—It has lately been my misfortune to diurnally perambulate, on my way to the "City," a line of thoroughfare having railway bridges thrown across some of the streets. Now, though I am not so fastidious with regard to dress as many young men of my acquaintance, I *do* most strongly object to an overcharged globule of rain, or other liquid, descending in my neck, spoiling one of the stiffest of "threefolds." I am an enemy to "Dampers" of any description in general, and showers (Danaen only excepted) in particular, but to "be put out of one's way" (having to go down the next turning) when a felt lining would cheaply and adequately provide a remedy, is more than can be borne by your humble servant. Rheumaticus.

Dublin.—A correspondence has passed lately between the Lord Lieutenant and the Lords of the Treasury on the subject of the application for a grant of money to carry on certain improvements in the city of Dublin. His Excellency, as we announced, had recommended a grant of 60,000*l.*; but the Treasury, though "fully alive to the advantages which would result from the accomplishment of the various plans suggested, regret that they are unable to comply with the request, as they could not ask Parliament to grant money from the general revenue of the country for the purpose of effecting local improvements, however desirable they may be." Notwithstanding this reply, the corporation are about to send a deputation to London, to renew the application to the Prime Minister.

Burning of Hungerford-hall, Strand.—Hungerford-hall was totally destroyed by fire last week, while in possession of the proprietor of a panorama of the funeral of the late Duke of Wellington. The casualty is attributed to extra jets of gas behind the canvas on the stage. It is long since we pointed out how such accidents might be prevented and valuable property protected, by rendering combustible substances, such as canvas and scenery, curtains, &c. nearly or altogether incombustible, by saline or other saturation.

New Railway Station at Wolverhampton.—Contracts for the erection of the station to be occupied jointly by the Oxford, Worcester, and Wolverhampton Company, the Shrewsbury and Birmingham Company, and Birmingham, Dudley, and Wolverhampton Company, have been taken, and the erection of the buildings, which will occupy twelve months, will be proceeded with forthwith. The site selected is on the road leading to Wednesfield. In front, the station will be 325 feet in length, and the platform within, which will be covered with a roof of glass and corrugated iron, will be considerably longer. The external elevation presents a central building in the Italian style, with extensive wings; terminated by pavilions, flanked at each end by out-offices, for general purposes. In the central building, the front of which will be 76 feet 6 inches, three doors will open into a vestibule, 36 feet 5 inches by 45 feet clear, in which there will be four booking-offices and staircases. The means of exit will be through passages, each 11 feet 9 inches wide, on each side of the central building. Blue bricks with stone dressings will be used.

Electric Telegraph for Railway Trains.—Capt. Wynne, a Government inspector, proceeded by express train last week from Euston-square to Birmingham, for the purpose of witnessing a trial of Professor Gluckman's invention for communicating between guards and drivers. Several signals, it is reported, were given by the guard, and instantly answered by the engine-driver. This was done while passing through various tunnels, during which time the noise of the train was considerable. It is estimated that the cost of attaching the apparatus to railway carriages will be about 17*s.* for each carriage, and about 2*l.* 10s. for the battery fixed in the guard's van and the bell apparatus on the engine. The idea of perplexing engine-drivers with the management of electric telegraphs while they ought to be attending exclusively to their engines does not seem to us to be a happy one at all, but perhaps the report is inaccurate in this respect.

Lighting of Churches.—In a paper lately read before the members of the Oxford Architectural Society, Mr. Skidmore thus referred to this subject:—What course would our forefathers have pursued had they possessed a medium for lighting so brilliant as that which has fallen to the lot of the present day? They would have so treated it as to render it a point of beauty in the adornment of the church. The fine effects produced in large churches by groups of small scintillations of flame producing a long vista of light leading eastward were then adverted to, and attention given to delicacy of hammered metal work for standards or other instruments by which the light would be conveyed to the building, treating them in harmony with the adherent nature of the material to be lighted. The construction of standards for isolated places, with wrought-iron supports analogous to the use of flying buttresses were enlarged on, as also the difference of treatment when attached to seats, and absence of any occasion when properly used for cutting away mouldings for the insertion of lead piping. The desirability of using foliage in the ornamentation suited to the part of the church for which they were intended was pointed out, and the vine and passion flower leaf cited as suited to the chancel, and other leaves, as those peculiar to the locality, to the other portions of the church.

Measurement of Brickwork.—The suggestion made by your correspondent "Z." as to the standard of brickwork, I think deserves the serious consideration of parties connected with the building trade. In London the rod reduced is the general standard, and I believe the same custom prevails over many parts of the country. This standard is attended with the disadvantages that it is almost an imaginary quantity (I do not speak in the mathematical sense), and that it is difficult to use, in mental calculations, with any approach to accuracy. I am not aware, moreover, that there are any peculiar advantages attendant upon its use, beyond the sanction of custom. This custom has been deviated from in several instances by architects of repute; and I have reason to believe it is but little followed by civil engineers. The quantity mentioned by your correspondent, viz. the yard cube, would, I think, be preferable to the rod reduced; but as I am not advocating any particular quantity, I would suggest, if his recommendation should not meet with approval, the yard superficial of brick-and-a-half work. Either of these quantities would, I have little doubt, be more convenient than the rod, and they certainly could be more readily used in mental calculations.—T. J. P.

New Style of Sepulchral Monument.—The *Birmingham Journal* of last week gives an account of some specimens of a new kind of sepulchral ornament, to which previous allusion has been made, and which consists in a combination of bronze electrotype with artificial stone. The bronzes are said to be good as well as cheap art-works, in which the crudity of mere castings is superseded by the closest impressions of the original sculptural idea, while the artificial stone affords a cheap mode of reproducing architectural or other details. The inventor is Mr. Potts, of Birmingham.

Artesian Well at Braintree.—The *Chelmsford Chronicle* publishes the details of a trial bore just completed at Braintree. The Local Board of Health, having a strong impression in favour of obtaining a supply of soft water on the Artesian principle, instead of the hard surface water from above the London clay, consulted Mr. Prestwich, the author of a recent work, "On the Water bearing Strata around London," and by his advice resolved upon making the attempt. At the depth of 245 feet from the surface, an apparently inexhaustible supply of water, said by ordinary tests to possess a considerable degree of softness, was got. The bore was made in a field adjoining Pods Brook, at an elevation, according to the ordnance survey, of 145 feet above the sea, being nearly 90 feet below the level of the highest part of the town. From a bore not exceeding 2 inches at the bottom, without any head or reservoir, but merely by introducing a common hand-pump, as much as twenty gallons per minute were obtained, and no exertions could reduce the level at which the water stood. The peculiarity of this trial is, the remarkable development of the mottled clays and sands between the London clay and the chalk. The well-borer, Mr. John Goode, of Great Baddow, stated that in thirty-five years' experience in various parts of Essex, he had never met with a similar thickness in these beds; and Mr. Prestwich remarked that, though by no means uncommon to the west of London, there were no previously ascertained data to lead him to expect such a thickness in these strata to the eastward.

Lock-making in the United States.—The manufacture of locks appears to be rapidly extending. In an establishment at Pittsburgh, employing 350 men in making locks, coffee-mills, copying-presses, &c. good work was being turned out. Another at New Haven, Connecticut, employs about 200 men in making locks and lock-handles. The latter are made of coloured clays, so mixed as to present a grained appearance. They are first moulded by hand, then turned in a self-acting lathe with great rapidity, and are afterwards baked in a furnace. Padlocks are made here of a superior quality to those of the same class ordinarily imported from England, and are not more expensive.—*New York Exhibition Report.*

Suggestions for Builders.—Perceiving that there is to be a new Metropolitan Buildings Bill, I beg to suggest that previous to any building being erected, proper drains and roads be made, and that all footings and brickwork to the height of 3 feet above the level of the surface of the earth, be built of vitrified bricks, thereby preventing any dampness arising; the same description of bricks to be used for all cellars, or underground work, and for more securely preventing noxious effluvia in houses: the earth in basement, or under the parlour floors, as the case might be, should be excavated 3 feet from such floors, then a layer of concrete be put in, and covered over with rough plate glass, thereby preventing any smell and vermin from annoying the inmates. It should be enforced that all air bricks for ventilation of ground-floors of houses should be at least 9 inches above the level of the earth. There are hundreds of new houses where the air bricks are below the ground. Bemarton-street, Caledonian-road, is an instance.

C. C.

TENDERS

For erecting printing-offices, in Suffolk-lane, City, for Mr. James Truscott. Mr. G. Grayson, architect.

Tickets, One Guinea each, to be had at the London Tavern, and at the Bay Tree Tavern, St. Swithin's-lane.

April 6, 1854. W. ALLARD, Secretary.

APPRENTICE to a BUILDER WANTED.—One who has been some time at the bench would be preferred. A premium will be required.—Apply to Mr. HAWKE, Builder, 3, Bride-lane, Fleet-street, and 1, Hamilton-terrace, Newcross.

APPRENTICE WANTED, a respectable Youth, as an out-door apprentice to a CARPENTER and JOINER. A small premium will be required.—Apply to Mr. WM. SMITH, Jun. Surveyor and Estate Agent, 13, Wells-row, Highbury, Islington.

A LAND AGENT and SURVEYOR, of many years' standing, and extensive practice in both branches, has a VACANCY in his office for a gentlemanly well-educated youth, as Articled Pupil. Letters, addressed Mr. STEWARD, care of Mr. Bock, Stationer, Leamington, will be duly forwarded.

DRAUGHTSMAN WANTED in a Cabinet and Upholstery Manufactory. Enclose a pencil sketch or two, and state age, former occupation, and salary expected, to B. C. Messrs. Fuller and Co.'s, 43, Brewer-street, Golden-square.

PUPIL WANTED by an Architect and Surveyor, where he would learn the practical as well as the theory of the profession.—Apply, post-paid, L. B. 4, Blomfield-road, Maida-hill, Paddington.

WANTED, ACTIVE AGENTS for the AMAZON LIFE ASSURANCE and LOAN COMPANY, and SICK BENEFIT SOCIETY. A liberal commission and procuration fees allowed.—Applications to be made to ROBERT GEORGE WEAR, F.R.G.S. 1, Ironmonger-lane, London. Manager and Actuary. Loans on personal security.

WANTED, a MAN, competent to undertake the management of a Pipe and Tile Machine. He must be able to make Flanged Pipes, and must understand Glazes.—Address, J. P. Post-office, Maidenhead, Berks.

WANTED, by a Builder, a person of business habits, competent to keep and make out accounts, take out quantities correctly, and make out estimates. Must be well acquainted with the prices generally of all kinds of builders' work and materials.—Address, prepaid (stating age, salary required, and where last employed), to Mr. H. Post-office, Kingsland-road Bridge.

WANTED, in an Architect's Office in Manchester, a DRAUGHTSMAN, who is fully competent to get up neat working and other drawings, and understands the usual routine of an architect's business.—Address, stating salary, &c. to N. M. care of Mr Wheeler, News-agent, Manchester.

TO SMITHS

WANTED, a competent Man to Superintend the MANUFACTORY of STOVES, RANGES, and IRON BEDSTEADS in an Industrial Institution. Reference to character will be required. Address, post-paid, to Mr. HARRIS, Stationer, Grafton-street East, Tottenham-court-road.

TO BUILDERS' CLERKS.

WANTED, a respectable YOUTH, 17 or 18 years of age, as JUNIOR CLERK in a BUILDER'S OFFICE. Apply by letter, in own handwriting, stating age, references, and salary required, to F. R. S Cresswell's Library, 124, Crawford-street, Bryanston-square. No one need apply but those who have been in a builder's office.

TO WHEELERS' FOREMEN.

WANTED, an experienced steady Man, to SUPERINTEND PREMISES, where there are a number of men at work.—Apply, personally, at Messrs. REDDING'S, Castle-yard, Holland-street, Bankside, on Tuesday morning, (11th April), at half-past nine.

WANTED, a strong, active LAD, as an OUT-DOOR APPRENTICE, to the Plumbing and Painting Business.—Apply to WILLIAM ELSTON, 8 and 12, Wormwood-street, City.

WANTED, immediately, a thoroughly competent DRAUGHTSMAN, more especially for setting up and colouring finished drawings of estates for building purposes.—Apply, stating terms, to M. Y. at Mr. Cundy's, 29, Winchester-row, New-road

BUILDER'S CLERK.

WANTED, a THOROUGHLY Good one.—Apply to Messrs. MILLER & FIELD, Bridge-road, Lambeth.

WANTED, by a Contractor, an active and intelligent YOUNG MAN, as CLERK and TIME-KEEPER.—Address, stating age, salary required, &c. to X. X. Office of "The Builder."

TO CONTRACTORS AND BUILDERS.

WANTED, to TAKE CHARGE of WORKS and MEN, in any part of the British empire or abroad, by a thoroughly experienced Man, competent to set out and measure up every description of public works, get up tenders and quantities, &c.—Address, Q. E. D. 8, Pleydell-street, Temple.

WANTED, a SITUATION as CLERK of WORKS. Is well experienced in all the branches of building, can get up plans, working drawings, and has unexceptionable reference from previous engagements.—Address, A. B. 21, Regent-street, City-road, April 7; April 14, C. D. 6, Little St. James' street, Pall-mall.

TO MASTER PLUMBERS

WANTED, by a respectable Young Man, that has been used to the Plumbing Business, a SITUATION as PLUMBER'S LABOURER. Wages moderate. Apply to W. D. 29, Sun-street, Bishopsgate-street.

TO SAW-MILL PROPRIETORS

WANTED, by a Person, a SITUATION as SAW SHARPENER; he has had a long experience in saw-mill machinery, can work timber or deal frame, convert and measure timber. No objection to go abroad. Can have a six years' character from his last place.—Address, A. B. 89, Borough-road, Southwark.

WANTED, by a respectable middle-aged Man, who thoroughly understands his business, constant EMPLOYMENT as PLUMBER; he is willing to fill up his time with painting and glazing.—Address, by post, to A. B. No. 55, Peascod-street, Windsor, Berks.

TO MASTER BUILDERS.

WANTED, to PLACE a LAD in the above Business. Indoors, and treated as one of the family; to finish his apprenticeship, 5 years. He has been 2 years in the business, and is quick and active.—For further information, address to Mr. ROBERT MERRY, post-paid, 93, York-street, Commercial-road East.

TO MERCHANTS, BUILDERS, AND OTHERS.

WANTED, by a Young Man, a SITUATION as CLERK or BOOK-KEEPER; writes a good and expeditious hand, and has a knowledge of law forms. Can give unexceptionable references as to character, &c; and to obtain a respectable situation would be willing to commence at a moderate salary.—Address, C. D. Mr. Tunnicliff's, Hill-street, Coventry.

TO BUILDERS AND IRONMONGERS.

WANTED, by the Advertiser, a SITUATION to work and superintend the Gasfitting and Brass-finishing department of the above. One who has a thorough knowledge of his business. Address, G. E. 4, Hemming's row, St. Martin's-lane.

TO ARCHITECTS, CIVIL ENGINEERS, AND CONTRACTORS.

WANTED, an ENGAGEMENT as ASSISTANT, by a thoroughly efficient Surveyor, who understands surveying in all its branches, levelling, taking out quantities, estimating, designing, and details.—Address, post paid, to X. X. No. 3, Portland-place, New Kent-road.

WANTED, by a Young Man who thoroughly understands his business, a SITUATION as CUTTER, or CUTTER and GLAZIER. He is capable of taking the entire management of a business.—Address to C. R. Mr. Mann's, 8, Old Church-street, Paddington.

TO BUILDERS, PLUMBERS, &c.

WANTED, by a thorough practical man, a SITUATION as PLUMBER, or Three-branch Hand: can have two years' reference from his present employer; no objection to the country.—Address, A. Z. 26, Little Chester-street, Belgrave-square.

WANTED, EMPLOYMENT, by a strong active MAN, who has a knowledge of French polishing, paperhanging, and painting. Moderate wages accepted.—Address, J. SIMS, Post-office, the Square, Battersea, Surrey.

TO BUILDERS, PAINTERS, AND HOUSE DECORATORS.

WANTED, by an experienced Man, a PERMANENT SITUATION as FOREMAN. Understands graining, &c. Good reference can be given as to capability and character.—Apply to A. Z. 24, Jewin-street, City.

WANTED, a RE-ENGAGEMENT as SUPERINTENDING FOREMAN to ENGINE-SMITHS, &c.; is of great practical experience; age 47; character will bear the strictest inquiry for ability, sobriety, and integrity.—Address, M. F. care of J. Ford, 18, John-street, Fitzroy-square. No objection to the country.

TO CARPENTERS AND BUILDERS.

WANTED, to APPRENTICE a Youth to the above (IN-DOORS).—Direct, G. A. Mrs. Paine, Broadway, Stratford, Essex.

WANTED, by an experienced, practical Man, Carpenter and Joiner, a RE-ENGAGEMENT as FOREMAN, or to take charge of any new buildings in town or country, with a good reference.—Direct to T. T. Mr. Capron's, Builder, 30, Northampton-row, Clerkenwell.

WANTED, by an experienced Person, an ENGAGEMENT as CLERK of WORKS or GENERAL FOREMAN. Good reference given as to character and ability.—Address, A. G. Office of "The Builder."

WANTED, by an active Man, a RE-ENGAGEMENT as SHOP FOREMAN. References unexceptionable.—Address, D. E. F. 6, Blandford-street, Portman-square.

N.B. No objection to the country.

TO ARCHITECTS.

A DRAUGHTSMAN, competent to prepare working, finished, and perspective drawings, is desirous of a SITUATION as above.—Address, S. S. S. Office of "The Builder."

TO BUILDERS.

A PRACTICAL experienced FOREMAN or CLERK of WORKS having half his time unoccupied, is desirous of ENGAGING his SERVICES for three days a week.—Address, A. B. 16, Grafton-road, Kentish-town.

TO ENGINEERS.

A GOOD, Practical, Mechanical, and Engineering DRAUGHTSMAN will be happy to meet with an ENGAGEMENT.—Address, Z. K. No. 20, Blackfriars-road.

TO ARCHITECTS.

A YOUNG GENTLEMAN, out of his Articles, well versed in the usual routine of the profession, is desirous of obtaining a SITUATION as ASSISTANT or DRAUGHTSMAN in a London Office. Satisfactory references given. Salary not the primary consideration.—Address, Alpha, Office of "The Builder."

A YOUNG MAN, who has just completed his (five years') Articles with an Architect in the country, is desirous of an ENGAGEMENT in London. Accustomed to the usual routine of an office. Unexceptionable reference. Improvement an object.—Address, C. R. G. 19, Flood's-terrace, Beresford-street, Camberwell.

AN Architect wishes to meet with a PUPIL the son of respectable parents.—Address, O. B. Office of "The Builder."

A CLERK of WORKS, who has recently fulfilled an engagement of some importance and continuance, is now desirous of a similar APPOINTMENT.—Satisfactory reference can be given as to character and ability.—Address, C. P. C. at Westley and Co.'s, News Agents, Cheltenham.

A YOUNG MAN wishes for a SITUATION in a Builder's Office, in either town or country; is a fair calculator and neat draughtsman. Salary moderate, and good references.—Address to A. Z. Moore's Library, 33, Princes-terrace, Caledonian-road, Islington.

A STEADY, practical Man, of strict integrity, who is used to the building branches, wants a SITUATION, as UNDER CLERK and MESSENGER, or where he can be generally serviceable. Is a good reader and writer, is quick and accurate at accounts, understands painting and glazing, and has a knowledge of the various new cements. Salary moderate.—Address, post paid, to A. B. Post-office, 111, Blackfriars-road.

TO LAND SURVEYORS, &c.

A GENTLEMAN, who has been five years in an architect's office, wishes to IMPROVE himself in MEASURING and VALUING LAND, &c.—Apply, by letter, to H. A. C. Porter's Lodge, Furnival's-inn, London.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

A THOROUGH practical CARPENTER, CLERK of WORKS, or GENERAL FOREMAN, is open to an ENGAGEMENT; is well experienced in the building trade, both labour and materials; has had considerable practice upon railway works, as bridges, stations, platforms, viaducts, and other heavy work, and is fully qualified to take the entire management of the building department upon an estate. Testimonials and references unexceptionable; aged 37.—Address, A. G. care of Mr. Buck, Saw-maker, Waterloo-road.

TO ARCHITECTS AND SURVEYORS.

A NEAT and CLEAN DRAUGHTSMAN, who understands both geometrical and perspective drawing, is desirous of a SITUATION at a moderate salary.—Address, A. B. Mrs. Bradshaw's, 3, South-front, Southampton.

A RESPECTABLE MIDDLE-AGED MAN, many years in a builder's office, and well acquainted with the general routine of the same, is in want of a SITUATION.—The most unexceptionable references given.—Address, pre paid, to G. W. D. 55, Commercial-road, Lambeth.

AS TIMEKEEPER, or CLERK in a prime-cost office, or to take account of castings; a young man, aged 24. Can have good recommendations from the firm where last employed.—Address, P. R. 10, George-yard, Lombard-street, City.

FOREIGN TIMBER TRADE.—WANTED, a SITUATION as CLERK or TRAVELLER.—Apply to F. R. S. Post-office, Wolverhampton.

FARM-BAILIFF.—WANTED, by a respectable middle-aged married man, without incumbrance, a SITUATION as above: has had for fifteen years the sole management of above 1,000 acres of hill and vale land, the superintendence of farm-buildings and their repairs, and the collecting of cottage and allotment rents on an extensive estate; has a general and practical knowledge of all kinds of stock—their usages for breeding, rearing, fattening, and other purposes. References unexceptionable.—Apply by letter, pre-paid, to G. K. 36, Beaufort-street, Chelsea.

TO TIMBER, STONE, AND BRICK MERCHANTS.

THE Advertiser, who is practically acquainted with the building trade, is desirous of an ENGAGEMENT as AGENT or TRAVELLER for the above, either on commission or otherwise.—Address, A. Z. 5, Cranbourn-street, Leicester-square.

TO CIVIL ENGINEERS, &c.

THE Friends of a strong, active, well-educated Youth are desirous of placing him in the Office of a Civil Engineer, where his services would be considered an equivalent. There is no doubt he would be found useful immediately. References given and required.—Address, B. B. B. Office of "The Builder."

TO CARPENTERS AND BUILDERS.

THE Parents of a Youth of respectability, and well-educated, are desirous of APPRENTICING him to the above Business, where he will be treated as one of the family.—Address, with full particulars, to A. B. Post-office, Barking.

TO ARCHITECTS.

THE Advertiser, a neat and expeditious DRAUGHTSMAN, competent to make working, finished, and perspective drawings, is open to a SITUATION. Salary moderate. Address, K. M. Office of "The Builder."

TO BUILDERS.

THE Advertiser is desirous of attaining a PRACTICAL KNOWLEDGE of BUILDING; he is 23 years of age, the son of a country builder, has worked at the bench, and is competent to keep a set of books. Wishing to devote his services in return for his board and lodging. Address, H. J. 329, Strand.

Z. Z.—A MILLWRIGHT, who is also a good draughtsman, is in want of EMPLOYMENT. Address, pre-paid, to Z. Z. Central Post-office, Piccadilly, London.

PARTNERSHIP.—TO BUILDERS.—WANTED, a PARTNER in an old-established business, who can command about from 800*l.* to 1,000*l.* The premises are extensive, and held upon lease at a moderate rent; they consist of two dwelling-houses, workshops, drying-sheds, stabling for four horses, and 10-horse power steam-engine, with circular saw bench and frame.—For particulars apply, by letter, to W. B. at Mr. Mansell's, Printer, 3, King-street, Borough.

TO BREWERS AND OTHERS USING STEAM POWER.

J. LEACH, Practical Brewery Millwright, Manufacturer of Jones's Patent Governor Regulator for Steam-engines, for maintaining an uniform speed when work is thrown on or off the engine: references where they may be seen in use.—26, Critchill-place, New North-road, Hoxton.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the largest in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf road, City-road, London.

WHARF CRANE for SALE.—A capital second-hand double-purchase iron-post WHARF CRANE, warranted to lift two tons, 16 feet radius, 16 feet jib, in good condition.—For further particulars and price apply to M. A. RICHARDS and SON, Engineers, Upper Ground-street, Blackfriars-bridge (Surrey side).—N.B. Estimates given, fixed complete with brick or stone well included, if required.

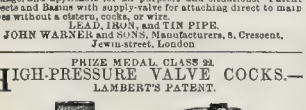
STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

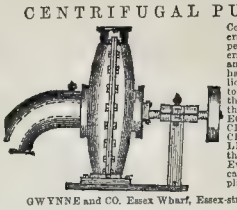
LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London

PRIZE MEDAL, CLASS 21.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.



The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids (hot or cold) to raise, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump..... £1 15 0
Patent Pump, with 18 feet of lead pipe attached, and bolts and nuts ready for fixing..... 3 0 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS, 8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the trade. An Illustrated Book sent on application post-free.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells, Pumps on hire. Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s per doz. painted.
Ditto .... 43s. per doz. galvanized.

Upper Ground street, Blackfriars Bridge, Surrey Side.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber. 1*l.* 15*s.*

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4 in. to double 12in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

STEAM-ENGINES, of various sizes, from two-horse power upwards, always in stock, made on the most improved principles, and of the very best quality; single and double-purchase cranes also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery, made to order by ANDREW McLAREN and CO. Windsor Iron Works, Windsor-terrace, City-road, and 174, Upper Thames-street.

FORTY-HORSE HIGH-PRESSURE STEAM-ENGINE by Rennie, nearly new.—TO BE SOLD, a High-pressure direct-acting STEAM-ENGINE, with 39-in. cylinder in jacket, expansion-valve, and gear; 6 feet stroke, flywheel, 18 to 20 tons weight; wrought-iron crank, crank shaft, and connecting rod, wrought-iron columns, and cast-iron bed-plate. Apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO CONTRACTORS

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from such-rise power to seventy-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased and can be seen at work at Messrs. MERWIN and HALL'S, Engineers and Portable Engine Makers, 32, Blackfriars-road. These engines have been successfully employed for years.

FOR SALE, in consequence of the owner making alterations and requiring more power, a capital 16-horse high pressure STEAM-ENGINE. May be seen in full work at Mr W. R. WOOD'S Sawing and Planing Mills, Wandsworth, Surrey.

STEAM BOILERS of every description, Wrought Iron Girder Bridges, Gas Holders, and General Castings, Chains, Cables, and Contractors' Iron Work, manufactured by MELROSE and HUSSEY, Phœnix Works, Tividale, near Dudley.—London Office, 78, Hatton Garden.

JAMES MICHIE, Engineer, Battersea-park, Nine Elms, Manufacturer of all kinds of STEAM ENGINES (portable and stationary), Pumps, Sawing Machines, Cranes, Crabs, &c.

N.B. An 8 horse high-pressure engine for sale.

ENGINES and BOILER for SALE, to be seen at the Atlas Works Company, Engineers, Emerson-street, Bankside, Southwark; an eight and ten horse beam engine; also a second hand six-horse engine and boiler, saw-frames, circular saw benches, and wood-planing machines, on the most approved principles. The six-horse engine and boiler to be seen at work on the premises.—For particulars, price, &c. address as above.

PREMIUMS REDUCED THIRTY PER CENT.

Annual Division of Profits.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,
14, Waterloo-place, London, and 30, Brown-street, Manchester.

DIRECTORS.

THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Deputy-Chairman.

Colonel Michael E. Bagnold.	William Morley, esq.
Francis Brodigan, esq.	Robert Francis Power, esq. M.D
Alexander Robert Irvine, esq.	Archibald Spens, esq.
John Inglis Jerdein, esq.	Frederick Valiant, esq.
James John Kinloch, esq.	Rev. F. W. J. Vickery.
Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy-holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums.

The Annual General Meeting of this Society was held on the 26th of May, 1853, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that whilst the Assurances effected in 1851 were 44 per cent. beyond those of 1850, nearly 70 per cent. beyond those of 1849, and 130 per cent. beyond those of 1848, the Assurances effected in 1852 considerably exceeded those of 1851, 925 new Policies having been issued in that year, covering Assurances to the extent of 186,600*l.* the yearly premiums on which amounted to 5,486*l.* 15*s.* It also appeared that the transactions of the first five months of the present year were greater than those of the corresponding months of 1853, or of any preceding year, whilst during the whole period referred to, the claims arising from deaths were much below their estimated amount. A resolution was thereupon passed, contributing a reduction of 30 per cent. on the premiums payable on all Policies on the participating scale, on which five or more annual premiums had been previously paid.

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction:—

Age when Assured.	Amount Assured.	Annual Premium hitherto paid.	Reduction of 30 per cent.	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 5 3	14 12 3
25	1,000	23 0 0	6 18 0	16 2 0
35	1,000	41 15 0	13 3 6	30 12 6
45	2,000	80 11 8	24 3 6	56 8 2

WESTMINSTER FIRE OFFICE.
Chief Offices—27, King-street, Covent-garden, London.

Rates of Premium moderate
Short-period Policies granted.
Rent Insured.
Losses promptly and liberally settled.

WESTMINSTER AND GENERAL LIFE ASSOCIATION.
King-street, Covent-garden, London.—Established 1836.
Life Assurances in all its branches effected.
Eight-tenths of the Profits divided among the Assured.
A Division of Profits every Five Years.
The Bonus additions have amounted to One-half the Premiums paid on the Policies.
Assurances without profits at reduced rates.
Any information required, either Fire or Life Insurance, with prospectuses and forms of application, may be obtained on application at the Office

W. M. BROWNE, Secretary and Actuary.
Agents required in the principal Country Towns.

PARTICIPATION OF PROFITS.

WEST of ENGLAND FIRE and LIFE OFFICE.
Instituted 1807.

Persons insuring against Fire have, every fifth year, a return of 50 per cent. of the surplus profits
LIFE INSURANCES.—Eighty per cent. of the surplus profits are returned.
Prospectuses and required information may be had gratis upon application to any of the agents; or to CHARLES LEWIS, Esq. the Secretary, at the chief office, Exeter; or at the office, 20, New Bridges-street, of the Manager and Agent in London

JAMES ANDERTON.

THE TRADESMAN'S and MECHANICS' MUTUAL FREEHOLD LAND SOCIETY.
Office, "Three Colts," Cambridge-road, Mile-end.

Shares, 25*l.* each. Weekly subscription, 1*s.* per share. Entrance fee, 1*s.* per share.

The FIRST WEEKLY SUBSCRIPTION MEETING will be held on TUESDAY EVENING next, APRIL 11th, 1854.

Prospectuses, or any information respecting the Society, can at all times be obtained on application at the Office as above.

BRITON LIFE ASSOCIATION, 36A, Moorgate-street.

Assurers in this Office may receive the amount assured during Life, without increased Premium

Loans can at all times be obtained and repaid by small instalments.

Investment Policies secure a payment of the amount assured in 13, 16, or 7 years, or at death if it should previously occur, on which advances can be obtained

Persons about to subscribe to Building Societies, will find the Building Policies issued by this Office combine the Assurance of Life with all the advantages derived from a Building Society.

Medical Gentlemen remunerated for their cases for their reports.

Annuities granted. All descriptions of Life Assurance transacted

Polices indisputable. Office hours from 10 a.m. to 4 p.m.

EDWARD PARSONS, Secretary.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted 1820

SAMUEL HIBBERT, Esq. Chairman.
WILLIAM R. ROBINSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 500*l.* and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 500*l.* and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000*l.* of which nearly 150,000*l.* is invested, from the risks incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

On the 31st October, 1853, the sums assured, including Bonus added, amounted to	£3,500,000
The premium fund to more than	800,000
And the annual income from the same source, to	100,000

Insurances, without participation in profits, may be effected at reduced rates. SAMUEL INGALL, Actuary.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. { Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Covering Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its suitableness for INTERNAL as well as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough Surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.

MANUFACTURERS,

PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. Those manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK —LONDON —PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO.; and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO. wholesale agents, 62, King William-street City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. R ANDERSON and CO. Timber-bush Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 6d. per cwt., casks extra if new.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint; is without smell, dries in one hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of dry lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 8s.

Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 3s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 10s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

DAMP WALLS! DAMP WALLS!—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of long duration; it is unfailing in its application. Entire houses have been papered in a short time after the last coat of plaster has been put on. Also for the repairs of old houses its value is great. A moderate room can be prepared for 2s. 6d.—Prepared only by Mr. J. STENT, Surveyor, Warminster. May be purchased of all respectable Druggists or Paper-dealers for 3s. per quart, or 10s. per gallon.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes Cement is applicable, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland-yard, and at the Works.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ROMAN and OTHER CEMENTS, Manufactured by J. M. BLASHFIELD, successor to the Patentees, PARKER and WYATT, who, in 1796, first introduced PARKER'S ROMAN CEMENT; also Tarras and Portland Cements, English and French Plaster, Terra Cotta Chimney Pots, Trusses, &c.

Manufactory, Mill Wall, Poplar; Depôts, Commercial-road, Lambeth; and Paddington-basin.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possess extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO hee to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 21, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks, &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

BLUE LIAS LIME.—QUARRY TO BE LET. Land to be let for the purpose of raising Blue Lias Lime of superior quality. The natural hydraulic properties of this kind of lime, and the great estimation in which it is held for the construction of buildings in wet or damp situations, are sufficient recommendations for its adoption in all such works as wharf walls, docks, &c. and also for concrete foundations. It is also peculiarly adapted for stucco. The Blue Lias Limestone is on the Bishop's Itchington Estate, near Southam, Warwickshire. The Oxford and Birmingham Railway passes through the Estate, and the Blue Lias Limestone is close to the railway.—Apply by letter to T. A. J. care of Mr. Ridgway, 169, Piccadilly, London.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

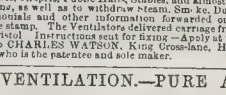
Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.



ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster: and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

SMOKE NUISANCE.—To BREWERS, DISTILLERS, and MANUFACTURERS generally where Furnaces are employed. Messrs. TUCKER and ADAMS beg to call the particular attention of the above named firms to their PATENTED INVENTION for the EFFECTUAL ABATEMENT of SMOKE. A model may be seen at work on MONDAY and TUESDAY next, and two following Weeks, on the same days, from TEN till FOUR, by cards of admission, to be had at Mr. TUCKER'S, Earl's-court, Old Brompton, where the model may be seen.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, Sole Manufacturers, 106, Blackfriars-road, and 11, Union-street, Borough; and of all respectable ironmongers, builders, &c.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 2,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, February 14, 1854:—

"An important feature in the contract for the maintenance of the Permanent Way, is that the contractors are bound to reduce their charges 50l. per mile per annum, whenever the Fish Joint, or certain other improvements, are hereafter introduced."

Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager; or Mr. WILLIAM HOWDEN, the Secretary, 26, Great George-street, Westminster.

LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELL invites the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excavators', brickmakers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.

Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead-road.

ASPHALTE PAVEMENT.—HENRY WRIGHT is prepared to lay down his Asphalte Pavement, which is peculiarly adapted for railway platforms, footpaths, garden-paths, court-yards, and school-yards 2½ in. to 3 in. thick, from 1s. 6d. to 2s. per square yard. Address, 32, Bucklersbury, City.

TO ARCHITECTS, BUILDERS, AND CONTRACTORS.

THOMAS PRENTICE and CO. being desirous of more extensive orders to lay down the IMPROVED ASPHALTE FLOORS, will make a satisfactory discount to any one securing orders for quantity.—Address, Stowmarket.

No. 1. Floors laid ¾ inch thick, 1s. per yard.
No. 2. Ditto 1 inch thick, 1s. 3d. „
No. 3. Ditto 1½ inch thick, 1s. 10d. „
No. 4. Ditto 2 inch thick, 2s. 6d. „

Employers to find sand, fuel, carriages, &c.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PILKINGTON, POLINCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, Hinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 8 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE. 28, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

MOORE'S PATENT MOVABLE GLASS VENTILATOR, for Windows, Partitions, Factories, Workshops, Warehouses, Greenhouses, Cottages, Stabling, Granaries, and other Buildings, in Railway and Private Carriages, &c. For Farms, Dairies, Outbuildings, &c. the Ventilator can be made to form a complete window, iron frames and rough plate glass, &c. Ventilators made to any size, and to most forms of sashes; also for sky or fan lights, and other purposes. A considerable saving and additional safety by having fixed window sashes.

MOORE'S PATENT "LEVER VENTILATOR," forming a regular current of air, is calculated to effect all that is required for improving animal and vegetable health. The vitiated air is emitted at the opening left for that purpose. To shopkeepers they are particularly recommended, as from their capabilities of removing the foul air caused by the gas in the shop and windows, they effectually preserve the stock in good condition and prevent explosions of gas.

Church and House Clock makers to the Hon. Board of Ordnance, the Russian Government, and the Emperor of China.

Manufactory, Sekford-street, St. James's-walk, Clerkenwell, London.

GOOD 3rds 16 oz. FOREIGN GLASS, in cases of 200 feet each, average size, 40 by 30, at 42s. per case; 4th ditto, 34s. Also 16 oz. ground do. do. 4d. per foot; Crown and 16 oz. Sheet squares, in 100 feet boxes, varying from 14 by 11 upwards, 2d. per foot; 4-inch rough Plate Tiles, 10s. per dozen. Also, Crown and Sheet Glass in crates, British and Patent Plate, Fluted and Stained Glass, Glass Slates, &c. Sheet Lead, Pipe, White Lead, Oil, Turpentine, Colours, &c.—G. FARMILOE and SON, 118, St. John street, West Smithfield, London.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration. All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

STAINED GLASS.—HOPKINS and BURFORD, glass stainers and Embossers, 48, Stamford-street, Blackfriars-road, beg to announce that they are prepared to execute STAINED GLASS WINDOWS for Churches or other Buildings in the Ancient or Modern style. Embossing, &c. with despatch.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 313, Oxford-street, adjoining Hanover-square, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner. Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

WINDOW-BLINDS FOR THE TRADE ONLY. The only Blind maker in London working exclusively for the Trade is WILLIAMS, 1, Rutland-street, Brompton. Manufacturer of every description of Venetian and outside BLINDS, conservatory Blinds, outside shop-blinds, arcade blinds and awnings, &c., executed on the most approved principles lower than any other house. Thoroughly supplied with springs. A list of prices forwarded post free, on application, to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

FIRST-CLASS WINDOW BLINDS.—No Extra Charges for Fixing within ten miles.—Country orders carriage free.—HADLEY and CO. confidently invite attention to their stock of blinds. Their system is to supply only the best articles, for which their prices will be found unparalleled.—Inside Venetian blinds, per square foot, 7d.; outside Venetian blinds, in cases, 5d.; outside, brushed cloth blinds, in cases, 1s 6d.; best holland spring roller blinds, 7d.; best holland roller blinds, mounted with brass cycle 8d.; gauze wire blinds in mahogany or walnut frames. Painted, polished frames, 1s. 2d. Estimates promptly furnished. HADLEY and CO. Window Blind Manufacturers, 152, Sloane-street, Chelsea. The trade supplied.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is at JAMES WIDDICOMBE'S WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, of THIRTY THOUSAND PIECES of the best and other best, in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFREY, ALLEN, and CO. 87, BISHOPSGATE-STREET WITHOUT, LONDON.

JAMES RHODES,

No. 6, MACCLESFIELD-STREET NORTH, CITY-ROAD, LONDON.

MANUFACTURER OF SASHES AND FRAMES, DOORS, &c. AND EVERY DESCRIPTION OF HOUSE JOINERY.

Glazed goods securely packed for the country. Prices on application at the Counting-house, as above.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company.

J. FARRELL, Secretary.

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications,

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas-tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT. AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage. 3rd. It effects a saving of half the timber usually required. 4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

LINOLEUMOUS FELT, for damp and under damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 32, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made with at the discharge-ends, inclining downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto offered to the public for similar purposes.

Inspection is invited to an assorted Stock of Jars in Nests, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior ware for supplying any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danvers Wharf, foot of Battersea-bridge, Chelsea; Priest Wharf, Kings-road, Camden New Town. J. TURNER 2, South Wharf, Praed-street, Paddington, and at COLWILL, Brothers, 32, Bridges-street Covent Garden.

Drawings and List of Prices will be forwarded free, on application.

Boards of Health, Architects, and all persons interested in sanitary progress are respectfully invited to examine

JENNINGS'S PATENT IMPERISHABLE CLOSET,
STREET GULLY, YARD, STABLE, AND SINK TRAPS,
SLUICE VALVES, &c. &c.

Boards of Health and large consumers supplied with JENNINGS'S IMPERISHABLE WATER CLOSETS in quantities at a small advance on the charge usually made for the FILTHY HOPPER PAN, WITHOUT WATER SURFACE.

A Book containing Illustrations, Descriptions, and Prices can be had on application, or post-free if two stamps are enclosed to

GEORGE JENNINGS,
ENGINEER AND PLUMBERS' BRASSFOUNDER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

A SAMPLE CLOSET, WITH STOOL COCK, COMPLETE, PACKED AND SENT TO ANY PART, ON RECEIPT OF A POST-OFFICE ORDER FOR THIRTY SHILLINGS.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

TO WATER COMPANIES AND PLUMBERS.

DEVEY and DALE'S CYLINDER BALL-VALVE and BALL, Registered Oct. 28, 1853. No. 3,536.

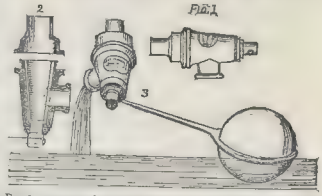

FIG. 1 represents the Cylinder Ball-valve in elevation. Fig 2 is a Section of the Interior, showing the uninterrupted course of the Fluid. Fig 3 shows the Cylinder Ball-valve in Action.

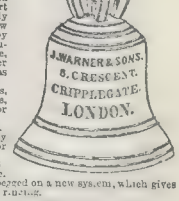
This Valve is peculiarly suited to High-pressure. The greater the weight of fluid, the more secure the Valve becomes, and the most perfectly prevents waste.—Manufactured solely by DEVEY and DALE, 8 and 9, Shoe-lane, and may be had of respectable Plumbers

SUPERIOR GLAZED STONEWARE
DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14,
VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect formity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs; Kingsland, Blackfriars, and Mill bank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—W. Peters's, North Wharf, Paddington.—C. Richardson's, south Wharf, ditto.—G. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Crock Wharf, Hammersmith.—J. Corbett's Depôt, Britten-street, Chelsea; and at the Pottery.



JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in tune, and far less costly than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, agreeably to Scale.

TUNED BY MACHINERY.

Stocked and wheeled ready for hanging. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved fittings, and cast in a new system, which gives a superior tone and facility for ringing.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, wish to call the attention of Architects, &c. that they supply Lightning Conductors, with the best and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne,
1, 8, Strand, London.
67, Hyde-park-street, Glasgow
27, Dale street, Manchester.

SALES BY AUCTION.

TO CAPITALISTS

WESTON-SUPER-MARE, SOMERSET.—TO BE SOLD by AUCTION, on MAY next (unless previously sold by private contract), nearly FOUR ACRES of BUILDING LAND, close to and commanding fine views of the sea, situate on the high ground overlooking the town, and admirably adapted for the erection of eight houses, to form a grand square, terrace, or detached villas, with frontages to the sea-remaining unbuilt upon in the town. There are several thousand feet of frontage. A large cottage-orné, stables, and carriage-house in hand, with two other cottages, let at 21*l.* and 30*l.* are on the estate. Three pews in the parish church, and valuable restrictive conditions as to the general character of the buildings to be erected will be imposed upon the purchaser. The purchase money may remain on mortgage, if wished. The owner is so fully convinced of a large and early return by extensively building on this valuable property, that he will willingly agree with a purchaser if desired, to join in expending full 20,000*l.* (in equal proportions) in erections thereon. Tuscan-red building stone, lime, bricks, and sand, on the spot. Timber, &c. by sea and railway into the town. Immediate possession may be had. Plans and particulars obtained of the owner, at Weston-super-Mare; of Messrs. Fisher and Son, Solicitors, Bedford-square, London; and of Messrs. Prankard, Barrister-at-Law, West Harptree, near Bristol.

TO TIMBER MERCHANTS, BUILDERS, CARPENTERS, COACHMAKERS, TURNERS, AND OTHERS.—Important Sale of fine Larch, Oak, Ash, Beech, Elm, and other Timber.

MR. T. BAXTER is directed to SELL by AUCTION, on WEDNESDAY, APRIL 12 1854, at ELEVEN o'clock, on the PREMISES, High Elms Park, near Farnborough, Kent, 250 very superior fine large larch trees 100 feet good stems, 100 ash, 50 very fine beech, and 50 evergreens, 200 oak trees, more or less, timber; 3,000 faggots, &c. all drawn out in lots. Also, 100 good standing oaks, with top and bark. May be viewed five days preceding sale; and applying at High Elms Park, and Cartlodge's Yard at the New Inn, Farnborough; Dover Castle, Deptford; Seven Stars Inn, Foot's Cray; Victoria Hotel, Dartford; Greyhound Inn, Croydon; Crown Hotel, Sevenoaks; of Mr. Stow, Farnborough Hall; and of the Auctioneer, Bromley, Kent.

To Builders and Others requiring choice and commanding Freehold Land on the West Side of London.—Important Freehold Building Ground and the Capital Farm Residence and Buildings at Portobello, in the Parish of Kensington, between the Harrow and Bayswater Roads upon the Great Western Railway and the Paddington Canal.

MESSRS. DANIEL SMITH and SON will SELL by AUCTION, at the MART on TUESDAY, APRIL 18, in various lots, about Twenty-two Acres of remarkably rich FREEHOLD MEADOW LAND, in the healthy and elevated spot, embracing valuable frontages and a great expanse of cheerful and diversified scenery; also the handsome and substantial Farm Residence, with numerous capital building, garden, pleasure, and paddock enclosing of about twelve acres, all with valuable frontages, being part of the unsold portion of the Portobello estate, offering most valuable sites for building, or any other important public undertaking.—Particulars and plans will be shortly published, and may be had at the Auction Mart; at the Royal Oak Inn, Paddington; of Messrs. Lowe, in the Temple; of Mr. Sim, Architect, Elgin-crescent, Notting-hill; and of Messrs. Daniel Smith and Son, 1, Langham-place, Portland-road.

The delightful Estate of Tettenhall Wood (nearly six miles from the great railway junction of Wolverhampton.

MESSRS. DANIEL SMITH and SON will (unless acceptable offers shall be previously made by private treaty) submit a PUBLIC COMPETITION, at BIRMINGHAM, in MAY or JUNE next, in lots, a certain portion of this remarkably beautiful and important PROPERTY, comprising Lots 1, 2, 4, 5, 7, 8, 9, 10, and 12, remaining unsold, form no inconsiderable portion of the charming timber-clothed slopes, on the great Shrewsbury and Holyhead road, with the elegant mansion, luxuriant pleasure-grounds and gardens of Tettenhall. Also, a smaller RESIDENCE. This portion of the estate offers several singularly choice, beautiful, and healthy sites for the erection of mansions, removed from the bustle of the town—commanding a superb expanse of rich and diversified scenery, with a fine air and abundant springs of water. The purchasers of these lots will have the best line of the land below them that can not be sold. The Tettenhall Wood estate is viewed and plans and every information obtained at the Offices of Mr. Banks, Architect, Wolverhampton; and of Messrs. Daniel Smith and Son, Land Agents, Wakefield, Hall-mall.

TO PIPE-CLAY AND HEARTH-STONE MAKERS, BUILDERS, DEALERS IN BUILDING MATERIAL, AND OTHERS. Jewin street and Jewin-crescent, City.

MR. PEAKE is directed by the Executors of Mr. James Ward, deceased, to SELL by AUCTION, on the PREMISES, No. 11, Jewin-street, on TUESDAY, the 18th of APRIL, at TWELVE the STOCK and IMPLEMENTS IN TRADE of a PIPE-CLAY and HEARTH-STONE MANUFACTURER; comprising a quantity of useful iron and wood screens for the remaining portion of the stock, and several lots of useful building material. At the same time will be sold the valuable lease and Goodwill of the Premises, which have been occupied by the last half-century with the most satisfactory results, unless the same shall previously be disposed of by private contract, which does not at present appear likely. The property may be viewed, and particulars of sale obtained; and further information had of Messrs. Fisher and Son, Solicitors, 165, Aldersgate-street; and at Mr. Peake's Offices, 41, Tooley-street, and 4, Fair-street, Southwark.

TO SEWER CONTRACTORS, BUILDERS, AND OTHERS

MR. PEAKE is favoured with instructions from the Executors of Mr. James Ward, deceased, to SELL by AUCTION, on the PREMISES, No. 11, Jewin-street, Lower-road, Islington, and Whitecross-street, City, on WEDNESDAY, APRIL 19, at TWELVE for TWELVE precisely, the STOCK and IMPLEMENTS IN TRADE, of a BUILDER and SEWER CONTRACTOR; comprising a quantity of scaffolding, stone and iron lighters, a large quantity of sewer-gang, mahogany desks, four lithic carts, capital spring cart, two trucks, and other useful effects. The sale will commence at Islington at TWELVE precisely, and Whitecross-street at THREE. May be viewed on the morning of sale. Catalogues had of Messrs Fisher and Son, Solicitors, 165, Aldersgate-street; and at Mr. Peake's Offices, 41, Tooley-street, and 4, Fair-street, Southwark.

Valuable Freehold Property, situate in the best business streets in the Borough of New Windsor

MR. R. P. DUNN has been favoured with instructions from the proprietors to SUBMIT to PUBLIC AUCTION, at the CASTLE HOTEL, Windsor, on FRIDAY, APRIL 21, at TWO for THREE o'clock, in Lots, by Candle, part of the valuable Freehold and Copyhold Premises, lately known as the SWAN INN, Thames-street, on the north side of the gateway, recently opened to the Great Western Railway, together with the yard, stabling, and outbuildings, and a well of fine spring water. The house contains thirteen rooms, excellent large kitchen and cellarage, and is approached from a frontage of 42 feet, by a depth of 125 feet back of it in fee. The premises, at a moderate rental, are unquestionably the superior business house, or would be very suitable for a banker, coachmaker, or wine merchant, or butcher. Also a Freehold House and Shop in Peascod-street, many years established as a bakery, let at an old rent of 16*l.* per year, and a house with frontage of 21 feet, both adjoining the Jolly Gardeners, let at 13*l.* per annum. Three Cottages at the back, also Freehold tenants, producing 16*l.* per annum, land tax free and sound.

N.B. The above properties present a very desirable and unusual opportunity for safe investments.—The premises may be viewed, and descriptive particulars, with plans, to be obtained ten days previous, at the sale of H. Darvill, Esq. and at Mr. R. P. Dunn's Office, Windsor.

TO MARBLE MASONS, BUILDERS, PLANT BROKERS &c.

MR GARDNER will SELL by AUCTION, at the STONE SAW MILLS, Bross street, New-road, Regent's-park, on 3rd MAY, APRIL 19, at TWELVE, a 5-H.P. high-pressure STEAM ENGINE, Air Pump, Pair of Steam Fly-wheels, Pipes, Pulleys, Shafting, Bearings, Gearing, Saws, Frames, Drawing Gear, and one Boiler and Cottage; 10,000 Feet of MARBLE, in Statuary, Veined, Sienna, Black and Gems, Black and Buff Slabs. On view 2 days prior and morning of sale. Catalogues had on the Premises, and at Mr. Gardner's Office, 15*a*, Tottenham-court-road.

SALES BY AUCTION.

Annual Timber Sale, Shortgrove Park, Newport and Wicken, Essex. To be SOLD by AUCTION, by

MESSRS. NOCKOLDS and KING, upon the PREMISES, on FRIDAY, the 21st day of APRIL, 1854, at our 200 TIMBER TREES, consisting of oak, elm, ash, beech, lime, maple, chestnut, birch, poplar, and willow; 150 capital LARCH FIRS (many of which are upwards of forty years' growth, and very fine); 50 Spruce, Silver, and Scotch ditto; also, 3,500 Faggots, and a large quantity of Firewood, as now lying in lots near the entrance to Wicken village and in Shortgrove Park, all contiguous to good roads. The attention of builders, coopers, and others, is particularly requested to the larch, elm, and ash timber, as many of the trees are of large dimensions and first-rate quality. The sale will commence with the timber at Wicken, at TEN o'clock precisely, and be continued at Shortgrove, Newport, at TWELVE o'clock. Six months' credit will be given, upon approved joint security, on all purchases above 20*l.*—May be viewed by applying at Mr. Tallmach's Farm, Wicken; and to the Bailiff, at Shortgrove Park, of whom catalogues may be had; also at the Coach and Horses Inn, Newport; and of the Auctioneers, Saffron Walden, Essex.

TO BUILDING MATERIAL DEALERS AND OTHERS.

MR. JAMES WHITE will SELL by AUCTION, upon the PREMISES, Thingbourne, about three miles to the west of the Dorking Station, on the Reading and Reigate Railway, on SATURDAY, APRIL 15, at TWELVE o'clock, the eight lots, the valuable MATERIALS of the old Mansion house there, including a large quantity of lead, sound timbers in roofs, joists, and girders, oak and deal floor boards, doors, sashes, doors, and frames, chimney-pieces, paving brick and iron-work.—Catalogues may now be obtained of Mr. Weakes, Stationer, No. 76, Farringdon-street, London; or they will be forwarded, on prepaid application, to the Auctioneer, Dorking.

TO BLACKSMITHS, BUILDERS, COACHMAKERS, AND OTHERS

MR. JAMES WHITE will SELL by AUCTION, on the PREMISES, at Leatherhead, between Epsom and Dorking, on WEDNESDAY, the 12th day of APRIL, 1854, at TWELVE o'clock upwards of 20 tons of bar, rod, square and sheet iron, 250 pieces of sheet tin, 6 cwt. flue, 1 ton of spare and new steel cart springs, about 200 house-bells, and a number of other trade items late the property of Mr. James Pullen, Whitesmith, Bellhanger, &c. of Leatherhead, deceased. Catalogues may now be obtained of Mr. Weakes, Stationer, No. 76, Farringdon-street, London; or they will be forwarded, on prepaid application to the Auctioneer, Dorking.

Third sale of Building Materials, to clear the ground for Battersea park

MR. W. R. GLASIER is honoured with instructions from the Commissioners of Her Majesty's Works and Public Buildings, to SELL by AUCTION, on the PREMISES, on WEDNESDAY, APRIL the 19th, at TWELVE precisely, in lots, all the valuable BUILDING MATERIALS, of the capital newly-erected house and premises known as the "British Flag," close to the Red-house Pier, and 3 house and premises on the Park-road, Battersea, and the existing of about 200,000 capital stock and other bricks, brambler, flooring, slates, tiles, iron, cisterns, lead, stone, valuable oak and deal, capital 4-feet copper, York-stair and other paving, doors, sashes, and frames, fittings, fixtures, and other effects, lying exceedingly well for land and water carriage. May be viewed the day prior, and morning of sale. Catalogues had at the Office of Works, 19, Whitehall-place; of James Pemberton, Esq. 7, Whitehall yard; at the Clerk of the Works' Office, Parliament, Park-road, Battersea; Swan and Albert taverns, Battersea; at Garraway's; and at the Offices of the Auctioneer, 41, Charing-cross.

A Freehold Brickfield to be Sold, on very reasonable terms, a short distance from Ealing, on the Great Western Railway.

MR. EDWIN FOX is instructed to SELL at a valuable BRICKFIELD in full work, capable of working ten moulds. The earth is very rich. There are eighteen pens undisturbed, a siding on the railway, turntable, &c. &c. The plant is of the most approved principle, and in thorough repair. A sample of Bricks may be seen by applying at Mr. Edwin Fox's Offices, 41, Coleman-street, Bank.

HACKNEY.—Valuable Freehold Building Land.

MESSRS. PRICKETT and SON will SELL by AUCTION, at the MART, on WEDNESDAY, APRIL 12, at TWELVE, in one lot, (a rectangular piece), a FREEHOLD BUILDING LAND, most desirably situate, near to Mare-street, Hackney, having a frontage to Upton-road, and Edward-road, and with a 40-feet roadway, leading opposite to the Hackney entrance to Victoria-park, estimated to produce about 200 per annum, as ground rent, and presenting a first-rate freehold land society, or a building speculation, there being a considerable depth of brick earth and gravel.—Particulars, with plans, may be obtained at the Mart, Messrs. Bell and Brodrick, Esqs. Solicitor, 14, Serjeant's-inn, Fleet-street; and of Messrs. Prickett and Son, Auctioneers and Surveyors, 34, Southampton-buildings, Chancery-lane, and Highgate, Middlesex.

Freehold Building Land, beautifully situate at Carshalton, Surrey

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, opposite the Bank of England, on THURSDAY, APRIL 27, at TWELVE, in thirty-two lots, about Twenty Acres of FREEHOLD BUILDING LAND, possessing frontages to good roads, most delightfully situate opposite Admiral Cator's Lodge, within a few minutes' walk of the Carshalton station, on the London, Croydon, and Epsom Railway, which is about half an hour's ride by railway from London. The land lies high, is very dry, and commands most extensive views, and is a neighbourhood, proverbially healthy, and in the midst of good fishing, shooting, hunting, and coursing. The lots will principally possess 50 feet frontage, and be upwards of 200 feet deep, sufficient for the erection of a genteel class residences, which are in great request.—May be viewed, and particulars, with plans, had at the Inns in the neighbourhood; of Mr. D. B. Slader, Solicitor, 38, Kingsland-green; also at the Mart, and of Messrs. H. Brown and T. A. Roberts, 22, Throgmorton-street, City.

CLAPHAM ROAD.—The valuable Building Materials of Clapham Park Mansion, with extensive Offices and Outbuildings, including 800,000 Stock Bricks; also, all the growing Timber, comprising about 600 trees.

PULLEN and SON respectfully announce that they are instructed to SELL by AUCTION, on the PREMISES, on TUESDAY, APRIL 11, at TWELVE, in lots, the whole of the capital BUILDING MATERIALS of CLAYLANDS HOUSE, with the extensive and substantial buildings in Clapham road, Clapham rise, near Kennington gate, comprising 2,000,000 capital bricks, several tons of lead, prime oak and fir timber, 15 squares of deal roofing, 14*l.* Cannon-row, Westminster; and of Pullen and Son, 30, Fore-street, Cripplegate.

TO CONTRACTORS, BUILDERS, AND OTHERS.

MR. JOHN THOMAS has received instructions from the Proprietor, Mr. C. Formby, to SELL by AUCTION, on the PREMISES, at WHITEWALL in the parish of Erith, in WEDNESDAY, the 19th day of APRIL, about 2,500,000 of BRICKS, consisting of two parts hard stocks, and the remainder pickings and place, of a very superior quality. The bricks will be ready loaded out in lots, and are situate within a few yards of the river Medway, directly opposite to the Dockyard at Chatham, where there is a draught of water for a large ship. Whitewall is half a mile from Strood Station. The Sale to commence at TWO for THREE o'clock.—Catalogues, &c. to be had of Mr. Hart, the Foreman; and of the Auctioneer, at his Office, Eastgate, Rochester.

SALES BY AUCTION.

Capital Oak Timber, Plumpton Estate, Wheatstead, near Bury St. Edmund's, Suffolk.

MESSRS. ISAACSON and TATTERSALL have received instructions to SELL by AUCTION, on THURSDAY, the 13th of APRIL, 1854, at the MANSION, at TWELVE o'clock, 1,500 OAK TREES, of various dimensions, with top, lop, and bark. The trees are numbered with white paint in lots, and are standing in Hay, Pattle, Woolmer, Plumpton, Howes, and Steward's Wood, and adjoining fields. Four months' credit on approved joint security. The above timber is worthy the attention of the public, and is within five miles of the Bury Station. It may be viewed any day previous to sale on application to Mr. Snell, at the Mansion; or Elsden, the Woodman, at the Lodge, where catalogues may be had; and of the Auctioneers, Clare, Newmarket, and Bury.

An entire New Stock of 8,000 pieces of Paperhangings to be Sold without the least reserve, and Marble Chimney-pieces ready for fixing.

MR. BRAY, Jun. will SELL, at his ROOMS, No. 259, High Holborn, on WEDNESDAY, APRIL 12th, at ONE o'clock, an entire NEW STOCK of PAPERHANGINGS, comprising 8,000 pieces, including rich flocks, excellent stout satins for drawing and dining-rooms, bouquet, stripes, parlours, scrolls, &c. suitable for small and secondary apartments, Gothics, granites, marbles, oaks, &c. for hall and staircases.—May be viewed and catalogues had.

NATIONAL PROVIDENT FREEHOLD LAND SOCIETY, 479, New Oxford-street, London.—NOTICE.—The SAINES ESTATE will be sold FOR SALE on SATURDAY, 8th of APRIL. Members having rights of choice will be entitled to exercise them in their order on SATURDAY, the 8th, from TEN a.m. until EIGHT p.m. and on MONDAY, the 10th, and TUESDAY, the 11th, from TEN a.m. till FOUR p.m. Persons who have not obtained rights, but are desirous of having early choice, can purchase the right of others, and a register of such rights as are for sale, with prices attached, may be seen on application at the Office.

March 31, 1854. JOHN P. COX, Secretary.

NATIONAL PROVIDENT FREEHOLD LAND SOCIETY, 479, New Oxford-street, London.

TRUSTEES

The Right Hon. Lord Viscount Clarendon.
Donald Nicoll, Esq. J.P. Ex-Sheriff of London and Middlesex.
John Thomas King, Esq.
Thomas Robins, Esq.

This Society being enrolled under 6 and 7 William IV. cap. 32, the members are entirely free from personal responsibility, beyond the amount of their subscriptions actually paid in, and no member is personally liable for any debt or expense incurred by the Society.

Shares 25*l.* Entrance 1*s.* 6*d.* Monthly payments 8*s.* No quarterage or extra payments. Females and minors can become members. No fines. Not political. Rules gratis.

A Post-office order for 10*s.* (being one month's subscription, entrance fee, and price of pass book) will ensure immediate enrolment.

Five per cent interest allowed upon all deposits of money, paid-up shares, and subscriptions six months in advance.

The whole amount of deposits or subscriptions can, in accordance with the rules, be at any time withdrawn with the interest due. JOHN P. COX, Secretary.

HOUSE DECORATIONS.—J. MAC LACHLAN, Painter and Decorative Artist, 25, St. James's-street, and at Clapham-common, informs Architects, Surveyors, and others, that he has personally acquired with him the whole of the valuable and extensive trade connexion of those who may wish to have their work nicely executed at a very moderate charge, and punctual to time. J. Mac L. will be glad to make estimates for the decoration of towns, or public buildings, in any part of the kingdom, with estimates.—Tenders for general repairs

MONEY.—2,000*l.* in One or more Sums of not less than 250*l.*; also 350*l.* and 150*l.* The above are Trust Moneys, and are ready to be invested on Freehold Security in Suffolk, or on the Borders of Essex.—Apply to Mr. Henry Lawrance, Solicitor, Ipswich, Foundation-street, Ipswich.

LOANS.—SUMS from 5*l.* to 200*l.* advanced on PERSONAL SECURITY two or three days after application, repayable any day in the week, by Weekly, Monthly, or Quarterly Instalments of 20 Years, One Year, or Six Months, and good Bills discounted.—LONDON and PROVINCIAL LOAN and DISCOUNT COMPANY. Private offices, 69, Gower-street, London. Open daily from Nine till Eight, thus avoiding inconvenience or public call. Charges extremely moderate, and strict confidence observed. Forms of application gratis.

LOANS.—Persons desirous of obtaining ADVANCES from 50*l.* to 200*l.* upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6*d.* each copy, or 5*s.* per post. Note. Four new classes are now in course of formation for London, and will immediately commence operations.

ROYAL POLYTECHNIC INSTITUTION. Patron.—H.R.H. Prince Albert.—During Passion Week Dr. Bachhoffner will give his popular Lectures on Descriptive Astronomy, splendidly illustrated with Dissolving Bio-rama, DAILY at Three, and at Eight o'clock in the Evenings, except GOOD FRIDAY, and SATURDAY Evening. All the other interesting Lectures and Exhibits as usual. The Seat of the Russian War, showing the principal places on the Danube, the Town and Battle of Sinope, with the Destruction of the Turkish Fleet, and other interesting scenes which have been lately supplied at great expense. The Beautiful Diorama of Rome will be Exhibited in a new Series of Dissolving Views, commencing on EASTER MONDAY. Open Mornings and Evenings. Admission, Schools and Children under Ten Years of age Half-price.

CYCLORAMA, ALBANY-STREET, will RE-OPEN on EASTER MONDAY, with a magnificent Panorama of Naples, exhibiting the Great Eruption of Vesuvius and Destruction of Pompeii, A.D. 79, with the present state of the Ruined City. These views have long been in preparation, and will be exhibited with all the resources of this vast establishment.

COLOSSEUM will be CLOSED during Passion Week, and Re-opened on Easter Monday.

ROYAL PANOPTICON of SCIENCE and ART, Leicester-square.—This Institution will be CLOSED during PASSION WEEK, and RE-OPENED to the public on Easter Monday.—Further particulars will be duly announced.

THE PANTHEON PICTURE GALLERY

COMPETITIONS.

TO ARCHITECTS.

THE BOARD of GUARDIANS of the Parish of PADDINGTON are desirous of receiving PLANS and ESTIMATES for EXTENDING the SIZE of the PADDINGTON WORKHOUSE, Harrow-road, to increase the accommodation from 250 to 500 inmates. The plans, &c. must be sent in on or before the 3rd day of MAY, addressed to the "Board of Guardians Paddington Workhouse," where a statement of suggestions for the proposed accommodation, and other particulars, may be seen. The plan selected by the Guardians will be subject to the approval of the Poor-law Board; and the Architect whose plan shall be approved will be employed to superintend the works upon the usual terms.—By order of the Board,

CHAS. BROWN, Jun. Clerk.

Paddington Workhouse, Harrow road, March 22, 1854.

TO ARCHITECTS, LANDSCAPE GARDENERS, AND OTHERS.

TAUNTON BURIAL GROUND.—Designs and estimates are required for LAYING OUT as a BURIAL GROUND, and PLANTING, DECORATING, and FENCING a FIELD of EIGHT ACRES and a HALF, called Mountway Eight Acres, situate one mile from Taunton, on the road to Wellington; and for ERECTING thereon TWO CHAPELS, either under one roof or detached, and an ENTRANCE-LODGE and TWO ENTRANCE-GATES from the turnpike road. The fence must be an effectual one, of at least 5 feet in height. The designs must be economical in all respects. A plan of the land may be seen at Mr. LEVERSEDGE'S, Surveyor, Taunton; but a personal inspection of the site is particularly recommended. The party whose plan is selected will have the superintendence of the works, and will receive five per cent. upon the money actually expended, for his plan and superintendence. No payment will be made to unsuccessful candidates for their designs. The designs and estimates must be sent, within one month from the date hereof, to Mr. PINCHARD, Solicitor, Clerk to the Burial Board, The Mount, Taunton, of whom any further particulars may be obtained.

Dated April 5th, 1854.

RHYL, NORTH WALES.—To ARCHITECTS and BUILDERS.—The Commissioners under the "Rhyl Improvement Act," intending to build a Market-hall, for the disposal of corn, butchers' meat, fish, and provisions in general, and hawkers' goods, are desirous of obtaining a satisfactory PLAN and DESIGN, with SPECIFICATION and ESTIMATE, for the ERECTION of such MARKET-HALL, together with Offices for the use of the Commissioners, and a Lock-up. The building should embrace a well-lighted and ventilated market, with good clock and bell, two rooms for business, one from 35 feet to be fitted up about 20 feet, fitted up for commissioners' and magistrates' meetings, &c.; and another about 25 feet by 18 feet, fitted up with writing-table, bookcase, and cupboards, as an office or retiring-room. A lock-up, with two or three cells, and constable's room; suitable rooms for fire-engine and watering carts, spacious storeroom, with all other necessary conveniences, drains, and approaches, preparations for supplies of gas and water. The total expenditure, including architect's charges, not to exceed 1,200*l*. The Commissioners offer 15*l*. for the most approved plan, with specification and estimate, upon its being adopted and carried out within the limited cost. The plans, &c. to be sent to the Chairman of the Commissioners (post free), on or before the 27th APRIL next. Mr. JOHN JONES, Clerk to the Commissioners at Rhyl, will show the ground on which the site is to be fixed, and give such further information as may be required. The market-hall to be so formed that it may be extended when necessary.—Rhyl, March 31, 1854.

CONTRACTS.

UXBRIDGE UNION.—To BUILDERS and CONTRACTORS.—The Guardians of the Uxbridge Union are prepared to receive TENDERS for the PIPE DRAINAGE and WATER SERVICES of the Union Workhouse at Hillingdon, together with making the requisite sewage tanks, buildings, &c. The plan, drawings, and specification may be seen, and further particulars known by application at the Offices of JAMES PILBROW, Esq. Civil Engineer, Tottenham, Middlesex. Tenders (marked "Tender for Drainage of Union") must be sent to me at my Office at Uxbridge, on or before THURSDAY, the 27th APRIL instant.

CHARLES WOODBRIDGE, Clerk.

Uxbridge, 6th April, 1854.

CONTRACTS.

TO CONTRACTORS.

Royal Engineer's Office, Chatham, April 6 1854.

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 24th day of APRIL, 1854, from Persons desirous of Contracting with the Honourable Board of Ordnance,

For the ERECTION of an additional BARRACK STORE at CHATHAM BARRACKS, and for RENEWING sundry FLOORS and CEILINGS at CHATHAM and BROMPTON BARRACKS.

Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 22nd instant, Sundays excepted.

The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of 200*l.* for the due performance of the Contract.

Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed, "Tender for Works at Chatham."

No Tender can be admitted after the said 24th day of APRIL, 1854.

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer of the Woolwich District hereby gives notice, that the Honourable Board of Ordnance are about to enter into a SPECIAL CONTRACT for BUILDING STABLES and INCLOSURE FENCE, at SHOEBURYNESS, in the county of Essex; and that such persons as may wish to TENDER for the same, may inspect the plans, and obtain a copy of the specification and form of Tender for the work, on applying to Lieutenant HAWTHORNTHWAITE at Shoeburyness, or to Mr. CARTWRIGHT, Clerk of Works at the Royal Engineer-office, Royal Arsenal, Woolwich, on or before the 26th of APRIL, 1854, between the hours of Ten and Four. Tenders, upon the printed forms, to be delivered at the Office of the Board, Pall-mall, London, on the 27th APRIL, 1854, addressed to the Secretary to the Honourable Board of Ordnance, and endorsed "Tender for Works at Shoeburyness." The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.—Woolwich, April 13, 1854.

TO EXCAVATORS, ROAD CONTRACTORS, AND OTHERS.

CHEDDINGTON INCLOSURE.—The Valuer having begun the matter of this Inclosure is prepared to receive TENDERS for MAKING and COMPLETING the PUBLIC DRAINS and BRIDGES; also for Making, Forming, and Completing a Hard Road at Cheddington, commencing at Blenheim Cross Roads through West End, to the Bridle Way at Lolly Mead, a distance of about seventy-two chains. Plans and specifications may be seen at the Offices of Mr. W. BROWN, Surveyor, Tring. Tenders to be sent on or before the 2nd day of APRIL, to Mr. NOCKOLDS, the Valuer, Saffron Walden, Essex, who does not pledge himself to accept the lowest or any of the Tenders. Saffron Walden, April 5th, 1854.

SEWERAGE MANURE.—The Commissioners for Improving the Town of Northampton are desirous of entering into CONTRACT with any person who may be disposed to dispose and convert into SEWERAGE MANURE the matter flowing from the culverts of the town. The Commissioners would be disposed to deal in a liberal manner with any party who would make a Proposition for the Erection of effectual Works necessary for the purpose. Any information respecting the above may be obtained from Mr. MARKHAM, the Clerk to the Commissioners, or Mr. HULL, their Surveyor.

CHR. MARKHAM, Clerk to the Commissioners.

Northampton, April 7, 1854.

TO BUILDERS.

CANTERBURY MUSIC HALL.—Parties willing to CONTRACT for the several works to be performed on the ERECTION of a MUSIC HALL in St. Margaret's-street, Canterbury, may inspect the drawings and specifications at the Office of Messrs. KINGSFORD, Sons, and WIGHTWICK, Solicitors, Canterbury, between the hours of TEN a.m. and FOUR p.m. The works are to be completed by the 31st AUGUST next, and the person whose Tender is accepted will be bound in a heavy penalty for the performance of the contract, and, if required, must furnish two respectable sureties to join him in his engagement. Sealed Tenders are to be sent on or before FOUR o'clock, on TUESDAY, the 18th instant, to the Office of Messrs. KINGSFORD and Co. addressed "To the Committee of the Canterbury Music Hall." The Committee do not bind themselves to accept the lowest or any Tender.

MIDLAND RAILWAY.—The Directors of the Midland Railway are prepared to receive TENDERS to CONTRACT for the EXECUTION of the whole of the WORKS necessary to be done in keeping the Stations and Buildings on the South Branch of the Midland Railway, between Derby and Rugby, in proper and efficient repair, for a term of seven years. The specification and draft contract may be seen, and form of Tender obtained, upon application at the Engineer's office, Derby Station, on and after MONDAY next. Tenders to be delivered to the Secretary to the Way and Works Committee, Derby Station, by TEN a.m. on TUESDAY, the 2nd day of MAY next.—The Directors do not bind themselves to accept the lowest or any Tender.

Derby, April 10, 1854. JOSEPH SANDERS, Secretary.

TO BUILDERS.

THE Proprietors of the Parish of South Kyme (about midway between Sleaford and Tattershall), in the county of Lincoln, desire to CONTRACT for the ERECTION of a FARM-HOUSE and FARMSTEAD, on a farm partly bounded by the Sleaford navigation, according to plans and specifications to be seen at the Office of Messrs. BROWNING Architects, Stamford.—Sealed Tenders to be sent to Mr. ELMON HUTCHINSON, Land Agent, Manthorpe Lodge, Grantham, on or before THURSDAY, the 20th of APRIL instant. The Proprietors reserve to themselves the power of refusing the lowest or any Tender then offered.—Security will be required for the due performance of the contract.—Manthorpe Lodge, April 6, 1854.

CONTRACTS.

TO GAS COMPANIES AND OTHERS.

THE Trustees for Repairing, Lighting, &c. Grosvenor-place and the Squares and Streets adjacent, do hereby give Notice, that they intend meeting at their Office, 43, Lower Belgrave-place, Pimlico, on FRIDAY, the 21st of APRIL, 1854, at THREE o'clock in the afternoon, to receive TENDERS for LIGHTING the whole of the PUBLIC LAMPS in the Grosvenor-place District, for a term of not less than five years. Companies or others desirous of contracting must send in their Tenders (endorsed "Tenders for Lighting, &c.") to the Office, sealed up, and addressed to the Clerk, before THREE o'clock on the day above mentioned. Further particulars may be had on application at the Trustees' Office. The expense of the stamp and contract to be defrayed by the Contractor. The Trustees do not bind themselves to accept the lowest or any other Tender.

GEORGE A. WALMISLEY, Clerk to the Trustees.

43, Lower Belgrave-place, 24th March, 1854.

TIME EXTENDED

NATIONAL FREEHOLD LAND SOCIETY.

TRUSTEES

Richard Cobden, Esq. M.P. Samuel Morley, Esq.
Charles Gilpin, Esq. W. A. Wilkinson, Esq. M.P.

SURVEYOR—James Wilson, Esq.
SECRETARY—W. F. Whittingham, Esq.

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

HOUSES of various classes and values being required to be built on the following Estates, namely,

BARNET,	GUILDFORD,
CAMBRIDGE,	HADLOW,
COL. HESTER'S,	MINST ER,
CROYDON GROVE,	SUTTON,
ENFIELD	ROMFORD,

The Directors will be prepared to receive plans and particulars of Houses suitable for the several situations, and Tenders to build the same.—Particulars of the lots to be built upon, the classes of Houses required, and the conditions of building, may be had on application to me, personally or by letter, on and after WEDNESDAY, the 19th of APRIL next; and the Designs, &c. are to be sent in on or before WEDNESDAY, the 3rd of MAY next.

JAMES WYLSON, Surveyor.

14, Moorgate-street, London, 22nd March, 1854.

TO IRON FENCING CONTRACTORS, SMITHS, AND OTHERS.

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES

Viscount Ranelagh. The Hon. Col. Lowther, M.P.
J. C. Cobbold, esq. M.P.

The Executive Committee are prepared to receive TENDERS for EXECUTING about 2,200 feet run of IRON HURDLE-FENCING, on the Brockley-hill-park Estate, near the Forest-hill Station on the Brighton Railway. The specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN, 5, Chancery-lane, on and after MONDAY, APRIL 10, between the hours of TWELVE and FOUR. Tenders are to be sent on or before TWELVE o'clock on FRIDAY, APRIL 21, addressed to the Surveyor, and endorsed, "Tenders for Fencing, Brockley-hill-park Estate." The Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, Norfolk-street, Strand, April 5, 1854.

CONTRACT for BASS and HEATH BROOMS.—The Trustees for Repairing, Lighting, &c. Grosvenor-place, and the squares and streets adjacent, do hereby give Notice, that they will be ready, on FRIDAY, the 21st day of APRIL next, at THREE o'clock in the Afternoon, at the Office, 43, Lower Belgrave-place, Pimlico, to receive TENDERS from, and to CONTRACT with, any person or persons who may be willing to CONTRACT with them for SUPPLYING the said Trustees with such a number of BASS and HEATH BROOMS as may be required by them during the Twelve Months. The Brooms to be delivered at the Offices of the Trustees in such numbers and at such times as may be ordered by the Surveyor. Further particulars and the form of Tender may be had on application at the Office of the Trustees, where samples of the brooms required may be seen any morning between the hours of NINE and TEN. All Tenders must be in writing, sealed up, and delivered at the Office of the Trustees, before THREE o'clock on FRIDAY, the 21st day of APRIL next. The Trustees do not bind themselves to accept the Lowest Tender.

Dated the 22nd day of March, 1854.

GEORGE A. WALMISLEY, Clerk to the Trustees.

SEWAGE MANURE.—THE DARTFORD LOCAL BOARD of HEALTH hereby give notice, that they are desirous of CONTRACTING with competent parties for the DISPOSAL of the SEWAGE of that town for the purpose of precipitation and deodorization. The outlet or point of discharge for the sewage will be on the north side of the town, and adjoining the Dartford Creek, a situation which offers great facilities for its ultimate disposal; but the contractor will have to engage to purify it sufficiently to prevent the liquid portion, when discharged into the Creek, from causing any offensive impurity to its waters. All the land, buildings, works, and machinery, that may be requisite for its deodorization precipitation, and to discharge into the Creek, will have to be provided, erected, maintained, and worked by the contractor at his own expense; and at the expiration of the term, all such land, buildings, works, and machinery are to become the property of the Board. The proposals are required to state the mode of purification proposed to be adopted, the term for which the sewage is proposed to be taken, and the annual sum will be paid for the same to the Local Board. The outlet of the sewage may be inspected, and further information obtained by application to Mr. JOHNSON, the Surveyor; and to Mr. HAYWARD, the Clerk to the Board, at Dartford. Proposals to be sent in to Mr. HAYWARD on or before WEDNESDAY, the 26th APRIL inst. endorsed, "Tender for Sewage."—By order of the Board,

Dartford, April 5, 1854. JOHN HAYWARD, Clerk.

[*For remainder of Contracts see next page.*

CONTRACTS.

TO CONTRACTORS.

THE CORPORATION of NEWCASTLE-UPON-TYNE are desirous of receiving for consideration, TENDERS from parties willing to undertake CONTRACTS for the SWEEPING and CLEANSING of all the public streets, lanes, courts, and footpaths in the borough, also, for emptying all ashpits and receptacles of manure and refuse to depôts, to be provided by the contractor, all the sweepings, scrapings, ashes, and other dirt and refuse to be carried away at least three times per week.

The contract to be for a term of not less than three years, to commence from such time as may be agreed upon. Persons tendering for the above work must state the sum they will charge for the manure per annum for the said term, or for what per centage they will undertake to dispose of it. A plan of the town and a specification of the work may be seen at the Office of Mr. Thos. Oliver, Surveyor, Guildhall, each day from ELEVEN till TWO o'clock.

Sealed Tenders, indorsed "Tenders for Cleaning Streets," directed to the Sanitary Committee, will be received at the Town Surveyor's office up to TUESDAY, 2nd day of MAY next.

Newcastle-upon-Tyne, March 21, 1854.

THE GREAT NORTHERN RAILWAY COMPANY.—To CONTRACTORS and BUILDERS.—The Directors are prepared to receive TENDERS for the ERECTION of FIFTY COTTAGE DWELLINGS, at the Coal-Kearing Station, near Peterborough. Parties disposed to Tender may inspect the plans, and obtain the requisite form of Tender on application to Mr. Cubitt, Engineer, Westminster, to whom the Tenders will be received up to application in this Office, in or after TUESDAY next, the 4th of APRIL. Tenders, sealed up and marked "Tender for Cottages," must be lodged at this Office before TWELVE o'clock at noon on TUESDAY, the 25th day of APRIL next when parties Tendering may attend if they please.

N.B. The Directors do not bind themselves to accept the lowest or any Tender.

By order,
R. MOWATT, Secretary.

Secretary's Office, King's cross Station, London, March 31, 1854.

TO CONTRACTORS, FARTHENWARE, SEWER AND DRAIN PIPE MAKERS, IRONFOUNDERS, AND OTHERS.

STRATFORD-UPON-AVON LOCAL BOARD of HEALTH.—IMPROVEMENT WORKS.—The Board hereby give Notice, that they are prepared to receive TENDERS from parties who may be willing to undertake either or both of the following separate

CONTRACT No. 2.—For the SUPPLY of EARTHENWARE SEWER and DRAIN PIPES, &c., and certain CAST IRON SEWER CASTINGS being part only of the whole quantity which will ultimately be required.

CONTRACT No. 3.—The EXCAVATIONS and the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES, LAYING PIPES, and other works (also a part).

The drawings may be examined and after the 12th of APRIL instant, and a list of the specifications, schedules, and forms of Tender or Contract may be had, together with any further information required, at the Office of EDWARD GIBBS, Engineer and Surveyor to the Local Board of Stratford upon Avon.

Tenders must be sent to the undersigned under cover, addressed to "The Chairman of the Stratford-upon-Avon Local Board of Health," endorsed "Tender for Contract No 2 or 3," as the case may be, on or before the 3rd day of MAY next.

The Board do not bind themselves to accept the lowest or any Tender. By order of the Board,

HENRY O. HUNT, Clerk to the said Local Board.

Stratford upon-Avon, 4th April, 1854.

TO CONTRACTORS, IRONFOUNDERS, AND OTHERS.

ROCHESTER BRIDGE.—The Wardens and Assistants of Rochester bridge are prepared to receive TENDERS from persons willing to undertake to COMPLETE the REMAINING PORTION of the above BRIDGE in a fit and proper state for the use of the public.

The Contract will include one Cast-iron Centre Arch of 170 feet span and Two Side Arches of 80 feet each, together with the whole of the masonry, brickwork, &c. required above the springing level of the arches, the foundations, piers, and abutments being already built to that level.

The estimated weight of cast-iron is about 2,500 tons, more or less.

Plans, drawings, and specifications of the intended work may be seen at the Office of Mr. JOHN WRIGHT, the Resident Engineer, in Star-lane, every day on and after MONDAY, the 6th of MARCH, 1854 between the hours of TEN and FOUR, where all requisite particulars may be ascertained.

Sealed Tenders for the above works, on a schedule of prices, are to be delivered at the Bridge Council Chamber, Rochester, and marked on the outside, "Tender for Superstructure of Rochester Bridge," on MONDAY, the 27th of MARCH next, before TWELVE o'clock at noon after which hour no Tender will be received accompanied by a letter from two persons engaging to become jointly bound in 10,000 with the party Tendering for the due performance of the Contract.

The Wardens and Assistants will not feel themselves bound to accept the lowest Tender.

ESSELL and HAYWARD.

Rochester, February 24, 1854.

TO IRONFOUNDERS AND GASHOLDER MAKERS.

ALTERATION AND EXTENSION OF TIME.

PARTIES desirous of CONTRACTING for the CONSTRUCTION and ERECTING of a GASHOLDER, single lift, in the premises of the Wakefield Gaslight Company, 1 to feet diameter and 1 feet 1 inches deep together with all the requisite columns, girders, guide rails, and bottle pipes, syphons, valves, pumps, &c. may inspect the plans, sections, and specification, and obtain forms of Tender at the Offices of Mr. CLAPHAM, Civil Engineer and Surveyor, 34, Parliament-street, on and after WEDNESDAY, the 10th, and until MONDAY, the 1st day of MAY, inclusive by which last-named day, and not later than Two o'clock in the afternoon, sealed Tenders, endorsed "Tender for Gasholder," must be delivered at the said Mr CLAPHAM'S Offices. The Lowest Tender may or may not be accepted.

13 Berkeley-square, Wakefield 28th March, 1854.

MILITIA BARRACKS, NORWICH and YARMOUTH.—Persons desirous of TENDERING for the above Works may inspect the plans and specifications at the Office of the Architect Mr. JOHN BROWN, Upper Kings-street, Norwich, on and after the 30th day of APRIL next. Tenders endorsed, "Tender for Militia Barracks," and addressed to Mr. GEORGE MOSELY, Clerk of the Lieutenancy, to be delivered at the Office of the Architect, on or before the 15th day of MAY, 1854. The party whose Tender may be accepted will be required to enter into bonds with two approved and responsible sureties, for the due performance of the contract.

Norwich, March 27, 1854.

TO CONTRACTORS.

THE DEWSBURY LOCAL BOARD of HEALTH is prepared to receive TENDERS for the CONSTRUCTION of a RESERVOIR at DUNCARD BRIDGE, near to the North Eleven of the Wakefield Thornhill, on the Manchester and Sheffield Railway. The reservoir to contain forty million gallons of water. Plans, sections, &c. may be seen at the office of WILLIAM RANGER, Esq. C.E. 34, Parliament, London; also at the Office of the Resident Engineer, at Dunford bridge, on and after the 20th instant; and copies of the specifications and conditions may be obtained at my Office, on payment of 10s. on and after the above date. Tenders, sealed and indorsed, "Tenders for Dunford bridge Reservoir," to be sent, under cover, to me on or before WEDNESDAY, the 10th day of MAY next.

CHAS. OLDROYD, Clerk to the said Local Board.

Dewsbury, April 13, 1854.

PARISH of BRIGHTHELMSTON.—EXTENSION of TIME. To BUILDERS and OTHERS.—Notice is hereby given, that the time for coming in Tenders for the Erection of the New Workhouse and Infirmary for this Parish is EXTENDED from the 15th instant to THURSDAY, the 20th day of APRIL next. Tenders to be delivered at my Office not later than THREE o'clock in the afternoon of that last-mentioned day.

By order,
ROBERT BECHER, Clerk.

Parochial Offices, Church street, Brighton, 11th April, 1854.

CONTRACTS.

PROPOSED DISTRICT CHURCH, BATTLE, Sussex.—Persons desirous of CONTRACTING for the ERECTION of a CHURCH, at BATTLE, in the county of Sussex, may inspect the plans and specifications, on and after the 17th of the present month, at the Office of the Rev. DE CROSS, Battle. Tenders to be forwarded, free of expense and sealed and indorsed, to the office of the Architect, Mr. TEULON 2, Laurel-square, Brunswick-square, London, on or before the 2nd day of MAY next. The Committee do not bind themselves to accept the lowest Tender.

TO BUILDERS.

TENDERS to CONTRACT for the ERECTION of LOCK-UP HOUSES at WINSLOW, LINSLADE, PENNY STRATFORD, QUAINTON HILL, and GREAT MARLOW. Persons willing to CONTRACT for BUILDING LOCK-UP HOUSES at any one or any of the Towns and Places above mentioned in the county of Buckingham, are invited to inspect the plans and specifications of the work prepared by Mr. BRANSON, of No. 1, Great Russell-street, Bloomsbury, London, Architect, and to transmit to me Tenders for erecting the Work of all or any one or more of such intended Lock-up Houses, on or before the 25th day of APRIL instant. The original plans and specifications may be seen at my offices in Aylesbury, on my day after the 17th of APRIL instant. One copy of the same may be seen at the Office of Mr. D. T. WILLIS, at Winslow, from the 22nd to the 27th day of APRIL inclusive. And from the 22nd day of APRIL up to and including the 2nd day of APRIL, after that date at the Office of Messrs. ALLEN and NEWTON, in Aylesbury. Buzzard, from the 24th of APRIL up to and including the 29th of APRIL; and one other copy at the house of W. LILLAM, Inn-keeper, Queen Victoria Coffee-room, Castle, at Penny Stratford, from the 27th day of APRIL instant up to and including the 22nd instant. After that date the copies of the plans will be removed to the Office of Mr. BULL, from the 24th of APRIL inst. up to and including the 29th inst.; and another copy at the office of Mr. HOLLIER, Solicitor, in Thame, from the 17th day of APRIL instant up to and including the 22nd inst. After that date at the Office of Mr. W. H. WARD, Solicitor, in Great Marlow, from the 24th of APRIL instant up to and including the 29th instant. The Magistrates of the County do not bind themselves to accept the lowest or any of the Tenders; but they will accept such one or more as, under all circumstances, they may deem most eligible.

ACTON TINDAL, Clerk of the Peace for Bucks.

Aylesbury, April 13, 1854.

TO MASONS AND OTHERS.

BRISTOL GENERAL HOSPITAL.—The Building Sub-Committee are desirous of receiving TENDERS for the EXCAVATORS, BRICKLAYERS' and MASONS' WORK required to complete and finish Mr. Pope's building and its appurtenances; the work already done being principally parts of the foundations. The quantities have been taken by Mr. WILLIAMS, Building Surveyor, of London, and copies of the same can be obtained after the 15th instant by persons intending to submit Tenders. The drawings, specifications, and copy of contract may be seen at my Office, from TEN to FIVE o'clock, up to the 29th instant, on or before which day Tenders sealed, endorsed, and addressed to the Building Sub-Committee, are to be delivered at my offices. The person whose Tender is accepted will be required to furnish a schedule of prices, to be annexed to the contract, being the bill of quantities proceeded with from, and to give security of approved persons, who will with the contractor jointly and severally become answerable to the Committee for the due performance of the contract; the liability of the sureties being limited to one-half of the amount thereof. The Committee will not bind themselves to accept the lowest or any Tender.

W. B. GINGELL, Architect.

St. Werburgh's Chambers, Bristol, 12th April, 1854.

HER MAJESTY'S CROWN ESTATE, SUNK ISLAND, COUNTY of YORK. Persons desirous of CONTRACTING for the ERECTION of a HOUSE, with STABLE, OFFICES, and FARM BUILDINGS, on the above estate, are requested to communicate their intention to Mr. Architect, S. TEULON, Esq. 2, Lansdowne place, Brunswick-square, London. The plans and specification may be inspected on application to the Lessee, Mr. FAIRELL, date Eggleston, Sunk Island and the latter not instant. Tenders to be delivered free of expense, sealed and endorsed, and addressed to the Hon. C. GORE, 1, Whitehall-place, on or before the 2nd day of MAY next. Mr. Gore does not bind himself to accept the lowest Tender.

TO CONTRACTORS, BUILDERS, AND OTHERS.

THE CORPORATION of NEWCASTLE-UPON-TYNE will be prepared, on or before MONDAY, the 1st day of MAY next, to receive TENDERS for the several Works in EXCAVATING for BASEMENTS, FOUNDATIONS, and MAINTAINING FOUNDATIONS, FORMING VAULTS and CELLARS, proper DRAINS and the carrying up of WALLS to the level of street. Plans and specification may be seen, and forms of tender and conditions of contract obtained on application to the Office of the Architect, Mr. Examining, &c. &c. Public, and Nicholas-square — By order of the Building Committee, Newcastle-upon-Tyne.

26th April, 1854.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a WAREHOUSE in Stanford-street, Castle-side N. Deptford, are informed that the plans, &c. may be seen, and further particulars obtained, at the Offices of Mr. T. C. HINE, Architect, Regent-street, April 6, 1854.

TO ROAD MAKERS AND GENERAL CONTRACTORS.

PERSONS desirous of CONTRACTING for supplying and fixing the KERBING required for the proposed new Roads in Nottingham park, may obtain the particulars of the same at the Offices of Mr. T. C. HINE, Architect, Regent-street, April 6, 1854.

NEW CONGREGATIONAL CHAPEL, BARNSLEY. TO BUILDERS. The drawings, specifications, and quantities of all the works in progress of the parties proposing to submit TENDERS for the various WORKS of the above CHAPEL at the School-room, Castlereagh street, Barnsley, from SATURDAY, the 15th instant, to MONDAY, the 1st of MAY, on which day the Tenders are to be sent, addressed to the Rev. BENJAMIN BEDDOE, Regent street, Barnsley, before TEN a.m. And further information may be had of the Architect, Mr. JOSEPH JAMES, 15, Furnival's-inn, London. The Committee do not pledge themselves to accept the lowest or any other Tender.

NEW CONGREGATIONAL CHAPEL, HALIFAX. TO BUILDERS.—Parties desirous of submitting TENDERS for the whole of the WORKS necessary for the ERECTION of the above CHAPEL, are informed that the drawings and specifications may be seen at Mr. HANSON'S Office, Woolshops, Halifax, from the 22nd instant, until MONDAY, on which day the Tenders are to be sent to JOHN CRESLEY, Esq. Halifax, addressed to the Chairman of the Building Committee, before TEN o'clock a.m. A copy of the quantities supplied to those surveyors to Tender, and any further information may be obtained from the Architect, Mr. JOSEPH JAMES, 15, Furnival's-inn, London. No Tender will be received which does not include the whole of the works, and the Committee do not pledge them elves to accept the lowest or any Tender.

TO ROAD CONTRACTORS AND OTHERS.

THE COMMITTEE of the CITY of LONDON and CONSERVATORS of FREEHOLD LAND SOCIETY are desirous of receiving TENDERS for CONSTRUCTING the ROADS, DRAINS and other WORKS on an estate close to the Railway Station at Highgate. The specifications and plans may be seen at the Offices of the Society, 79, Portland-street, on and after MONDAY next. Tenders must be delivered, endorsed "Tender for Roads, &c." before FOUR o'clock on TUESDAY, the 25th instant.

J. HIGHAM, Secretary.

CONTRACTS.

NOTICE to BUILDERS.—SIX HOUSES, required to be ERECTED in Ashburnham-grove, Greenwich. Persons desirous of TENDERING for the ERECTION of the above-mentioned SIX HOUSES may see the plans and specification of the same by applying to Mr. TANNER No. 2 Nelson-street, Greenwich, who will receive Tenders up to the 24th APRIL, 1854.—No. 7, Nelson-street Greenwich, 13th April 1854.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of OFFICES for "The Conservative Land Society," on a plot of ground lately 7 and 8, Norfolk-street, Strand, may inspect the drawings at the Offices of the Architect, on and after MONDAY, APRIL 3rd., next. The Executive Committee do not bind themselves to accept the lowest or any Tender.

GEORGE MORGAN, Architect 5 Chancery-lane.

METROPOLITAN COMMISSION OF SEWERS.—TO BUILDERS and OTHERS.—The Metropolitan Commissioners of Sewers hereby give notice that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 25th day of APRIL, 1854, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to contract for the LAYING DOWN, CONSTRUCTING, and COMPLETING certain intended Brick and Pipe Sewers, 4,161 feet in length or thereabouts, with other works in connection therewith in New-street and Rose-street, Covent-garden, and other streets and places in the respective parishes of St. Giles in the Fields, St. Martin-in-the-Fields, St. Marylebone, St. Anne, Soho, and St. Paul, Covent-garden, all in the county of Middlesex, the whole of the said sewers, 3,770 feet in length or thereabouts of Brick Sewers, with the works in connection therewith, in Peterrock-street and Little Albany-street, and other streets and premises in the parishes of St. Pancras, in the county of Middlesex (in one Tender) 500 feet in length or thereabouts of Brick sewer, with other works in connection therewith, in North Portman-Mews, in the parish of St. Marylebone, in the county of Middlesex (in one Tender); and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained at the Principal Office of the said Commissioners, No. 1, Greek-street, Soho-square, until the 24th APRIL, 1854, between the hours of NINE a.m. and FOUR p.m. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square,
Date this 13th day of April, 1854.

METROPOLITAN COMMISSION OF SEWERS.—TO BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commission of Sewers hereby give notice that they will meet at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 25th day of APRIL, instant, at ELEVEN o'clock a.m. precisely, to open TENDER for the SUPPLY of MATERIALS and the execution of the DAY-WORK required in the WORKS of the said Commission, within the limits of the undermentioned districts, viz.—Greenwich, Ravensbourne, Surrey and Kent, and Wandle districts, and the district west of the Wandle. The Tenders are to be upon the basis of schedules of prices, and the contracts are to be for one year from the date of the contracts, and bonds, subject to determination in the manner stated in the conditions. Parties wishing to submit Tenders may, on payment of 10s. 6d. obtain printed forms with general conditions, particulars, descriptions, schedules, plans, and drawings on application at No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. No Tender will be received after ELEVEN o'clock a.m. precisely, on the said 25th day of APRIL; and any Tender which is not upon the printed form and schedules of the Commissioners, and duly signed by the party tendering, will be rejected. The contractor whose Tender shall be accepted will be required to enter into bonds with two responsible sureties, to be bound jointly and severally in the sum of £500 for the due performance of the contract. The Commissioners do not bind themselves to accept the lowest or any Tender.—By the Court,

E. H. WOOLRYCH, Secretary.

1, Greek-street, Soho-square, 14th April, 1854.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GOSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-street, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, THIRTY PER CENT. CHEAPER than in any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFREY, ALLEN and CO. Paper Stainers, beg to call the attention of the trade to their patterns of Paper hangings for the present season, which comprise every description of style and quality, from the most elaborate decoration to the cheapest paper that can be produced, and which they are prepared to offer at very low prices. J. A. and Co. take pleasure to inform the trade that they have OPENED a WAREHOUSE at No. 56, OXFORD-STREET, where all goods can be obtained on the same terms as at the Factory.

GUTTA PERCHA PAPER FOR DAMP WALLS. J. A. and CO. are the sole vendors of this well-known remedy for Damp Walls.

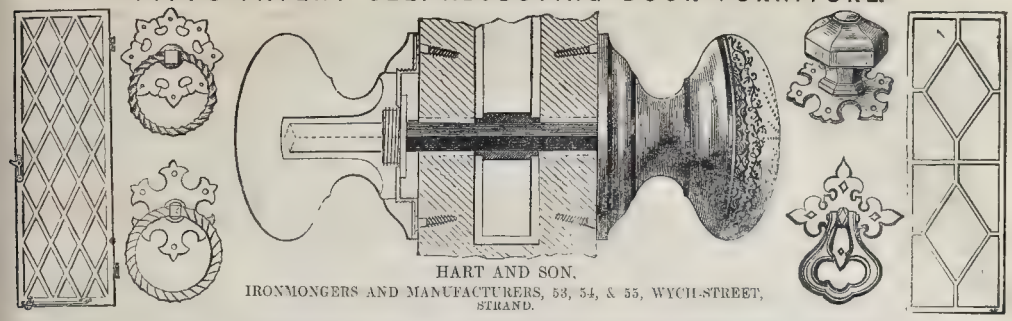
1, 5, Whitechapel, near the Obelisk, and 500, Oxford-street.

PAPER-HANGINGS.—R. HORNE, PAPER HANGING MANUFACTURER, 41, Gracechurch-street, City, invites builders and the trade to inspect his extensive stock of NEW DESIGNS in PAPER-HANGINGS, which, by his unrivalled powers of production, he is enabled to offer at the following prices, in stock quantities, for cash only, viz.:—

Stout lining paper	5d.	Per Piece.
Superior ditto	6½. and 7d.	
Bed-room papers, in great variety	8d. 5d.	
An excellent oak paper	8d.	
Sitting-room ditto, blended grounds	7d. 8d.	
Hand-made marbles	9d. to 1s. 6d.	
Good satin papers	1s. 6d. to 2s. 6d.	
Flock papers	2s. 6d. to 3s. 6d.	
Hand-made granites	9d. to 1s. 6d.	

Every novelty in French and English panelled decoration always in stock; also excellent imitation of fancy woods.

N.B. Patterns sent into the country, by post, showing the style and quality of the above, on receipt of two stamps, and the goods despatched with promptitude on receipt of a remittance to the amount of the order given.



GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of its tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 19, 1853.

In answer to your inquiries respecting the Gutta percha tubing for pump suctions I find that the water has not all effect on the least, although it will cut lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours &c. C. Hacker."

N.B. The Company's illustrated Circulars contain many instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City road, London.

TARPAULINS for COVERING ROOFS during Repairs SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS,
19, Wigmore-street, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent, Mr BARRETT, 12 York-buildings, Adelphi.

PLUMBING.—T. STANWAY, 10, Dorset-street, Portman-square, begs to inform the building trade generally, that he executes every description of Plumbing at the lowest prices; baths, closets, and every description of hydraulic apparatus fixed, and action warranted. List of Prices had on application at the Warehouse, or by letter prepaid.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. is after the model of the fences of this material in the Slopes and Home-park, at Windsor, has been for several years of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.
149, Strand, London.
67, Hyde-park-street, Glasgow.
37, Dale street, Manchester.

GEORGE HART, 253, STRAND, Near Temple-bar,
WHOLESALE, MANUFACTURING, AND FURNISHING IRONMONGER.

Proprietor and Manufacturer of Pitt's Patent Self-adjusting spindled Door Furniture.
Lists on application.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK.

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, conchhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Sise-lane, London.

CHUBBS' LOCKS, FIRE-PROOF SAFES, AND CASH BOXES.

CHUBBS' PATENT DETECTOR LOCKS give perfect security from false keys and picklocks, and also detect any attempt to open them. They are made of all sizes, and for every purpose to which locks are applied, and are strong, secure, simple, and durable.

CHUBBS' PATENT LATCH, for front doors, counting house doors, &c. is simple in construction, low in price, and quite secure. The keys are particularly neat and portable.

CHUBBS' PATENT FIRE-PROOF SAFES, BOOKCASES, CHESTS, &c. made entirely of strong wrought-iron, so as effectually to resist the falling of brickwork, timber, &c. in case of fire, and are also perfectly secure from the attacks of the most skilful burglars.

CHUBBS' CASH and DEED BOXES fitted with the Detector Locks.

CHUBB and SON, 57, St. Paul's Churchyard, London.

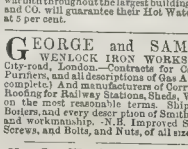
PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED. These Locks are recommended to the public for their simplicity, durability, and perfect security, as do Parnell's Four-LEVER HOUSE-DOOR LOCKS, Parnell's Portable Iron Chests, Iron Box Staples and Striking Plates, Fire-proof Safes, Deed and Cash Boxes, Copying and Lever Presses. Descriptions and lists of prices may be had at the Depôt, 52, Strand, gratis.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

212 SAFES.—MILNER'S HOLDFASTS, fire resisting by means of the only perfect non-conductor, vaporisation, are the strongest, best, and cheapest, because the only effectual safeguards against fire, robbery, or violence, for ledgers, deeds, cash, or valuables. Lord Chief Justice Campbell, in summing up on the late trials for infringement of MILNER'S SAFES, was pleased to observe "He must say he had been astonished to find such extraordinary evidence of their usefulness; up to this hour he had no idea that there were any human means of so effectually preserving papers from the action of fire. It was a comfort to one to know that there was such an antidote, by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to whether it is useful, it appears to be allowed on all hands; IT SEEMS TO BE A MOST MARVELLOUS PRESERVATIVE AGAINST FIRE, for the water remains permanently held in artificial or natural vessels, AND THE VERY CAUSE WORKS THE CURE for the heat releases the water or moist ire, and then it is turned into steam, and the steam moistens the substance that is to be preserved, AND SO IT IS AN EFFECTUAL STEAM AGAINST FIRE.—Milners' Patent Safe Works, Liverpool. London Depôt, 47A, MOORGATE-STREET, City, London.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK, also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace grates, ash doors for the same, hot-water pipes, elbows, tees, syphons, throttle valves, stop cocks, flange and socket elbows, &c.; also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge wharf, No. 6, Baukside, London, near the Southwark iron-bridge.

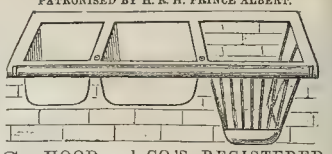


TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOILESVE'S PATENT CALORIFERE, constructed on the principle of four times of water, without altering the finest forms or injuring the qualities of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small room is required, and little repair necessary for many years. A great deal of fuel, large stores, or wharf-space, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Woolwich Dock Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vogan, Doo, and Raymond, Dockhead, and several maltsters, millers, and manufacturers in London and country. Apply per post to P. BOILESVE, Engineer for French Flour Mills, Turbines, &c. 55, King William-street, City.

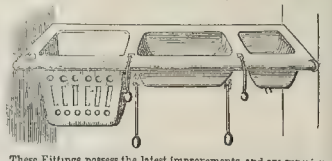
NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, just completed for two kitchens in the above building. A great variety in stock up on the same principle. Gas lights from 7d. by which a warm bath may be obtained for three-halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated Dry Gas Meters, 5,000 in use. Testimonials at the office, 145, Regent-street. Manufactories removed from Hampstead-road and St. Martin's-lane to more extensive premises, New-road, near Albany street.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boilers, requiring no brickwork; Warm Air Apparatus, &c.—Apply to SPILLER and TAYLER, Engineers, Battersea.



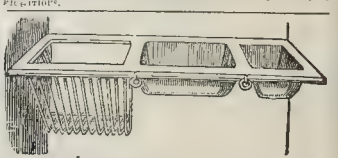
WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 18 4, which fully bears out the able address of the Rev. H. J. Boges, delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus. (Gas works erected complete.) And manufacturers of Corrugated and all kinds of Iron Roofing for railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Slip Tanks, Steam and Hange Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.



JOHN WALKER, CORRUGATED IRON ROOF and BUILDING MANUFACTURER,
And GENERAL CONTRACTOR.
Works—Mill Wall, Poplar, London; and Gilbrook, Birkenhead.
Offices—Corner of Arthur-street West, London-bridge; late 63, Gracechurch-street.

PATRONISED BY H. R. H. PRINCE ALBERT.



S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse, 81, Upper Thames-street.

BARTON'S PATENT STABLE FITTINGS, PLAIN, ENAMELLED, and GALVANIZED.

These Fittings possess the latest improvements, and are superior to any hitherto manufactured. Patent dated 19th October, 1853. Stable Furniture of every description, Iron Gates, Railing, Strained Wire Fencing, Hurdles, Rain-water Pipes, Gutters, &c.
JAMES BARTON, Ironmonger, &c. Manufactory and Warehouse 370, Oxford street, London, a few doors east of the Pantheon.
CAUTION.—Other Stable Fittings of this description, assuming to possess all the latest improvements registered and patented, are PIRATICAL.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented. Every article in Stable Furniture on show.
COTTAM & HALLEN, 3, Winsley-street, Oxford-street, London.

IRONMONGERS AND MANUFACTURERS,

TO BUILDERS, CARPENTERS, AGRICULTURISTS, AND GARDENERS.

BENNETT and NAYLOR, GENERAL IRONMONGERS and FACTORS, Sole West End Agents for PARKES' (late Warton Parkes) celebrated STEEL INGOT GARDEN FORKS and TOOLS; also for the only efficient STOVE, with or without a Flue, suited for Greenhouses and Conservatories, patronised by her Majesty, price from 18s. upwards, at the Great Western General Ironmongery Warehouse, 255, Oxford street, between Parkstreet and North Audley-street, established for the sale of all descriptions of Ironmongery at wholesale prices. Sheet, Hoop, Rod and Bolt Iron. Locksmiths and Bell-hangers.

THOMAS EDINGTON, IRON MERCHANT AND CONTRACTOR, Inspector of Railway Bars and Castings, 17, GORDON-STREET, GLASGOW.

FOUNDRY AND IRON WORKS, 63, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico.—All works of art in the various metals executed at the above foundry.

IRON SAFE.—FOR SALE, an IRON SAFE, in good condition, 1 foot 9 inches by 1 foot 2 inches, and 3 feet 4 inches in height, fitted with drawer and shelves. Price 5l. 5s.—Apply to H. B. 33, Lonsdale square, Islington.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt for Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.—Office, 8, Crescent-terrace, Millbank, Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bancar Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

ITALIAN and GALWAY MARBLE QUARRIES: DEPOT, WHITEHALL WHARF, PARLIAMENT-STREET, WESTMINSTER.—Mr. FRANKLIN invites the consumers of MARBLE, to inspect his large stock of ITALIAN and IRISH MARBLES, consisting of twenty different descriptions, in blocks and slabs. The following ships are daily expected from Leghorn:—*Swanhoide, Rhoda, Carolina, Coquette, Catherine*, with sixty-one blocks of Statuary, of large dimensions, suitable for Sculpture, Vein, &c. &c. Also *Galway Packet*, with 150 tons of BLACK BLOCKS and SLABS. —The above will be sold at former prices, with the addition only of extra freights.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention, that defy competition in price and quality. They are supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing-mills, Cambridge-heath, Hackney. W. M. HUSTLER, Proprietor.

TO BUILDERS, MASONS, AND CONTRACTORS.

OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Earl-street, Holywell-street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

SERPENTINE MARBLE of choice quality ON SALE, in blocks and slabs, at moderate prices.
THOMAS JACKSON, Commercial-road, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

SCAGLIOLA done on an improved principle. I refer to the Gothic Arch done by D. DOLAN, which gained the only Prize Medal awarded in the British department for the manufacture of the above work. Specimens to be seen at 192, Drury-lane, two doors from Holborn, with a choice collection of ornaments for building purposes, trusses for shop-fronts, always ready. Superior royal coats of arms for half the original cost.

BATH STONE.—HENRY STONE begs to inform Builders, Contractors, and Others, that he still continues to supply the best BOX HILL GROUND, and Lodge Shell HOME DOWN STONE, on the most reasonable terms.

H. S. also begs to call particular attention to a Quarry he has lately opened on Hampton-down, near Bath, where he has some beds of Soft White Stone, of a very superior quality, and adapted for either exterior or interior purposes.

Ashlar and Sawn Range Stone cut to order. Cargoes shipped and delivered to any part round the coast.
Residence, Widcombe, Bath.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scallett Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stone work for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

ABERDEEN and PETERHEAD POLISHED GRANITE.—Chimneypieces, Monuments, Columns, Pedestals, Vases, Monumental Urns, &c. executed on the shortest notice, and at the lowest possible prices, on application to JAMES WRIGHT, Manufacturer, 112, John-street, Aberdeen; or A. and F. MANUELLE, Granite Merchants, 12, Trinity-square, Tower-hill, London.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto; rubbed and tooled sills; Harehill and self-faced slab; rubbed York paving; pipes, pots, &c. all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge-wharf, City-road.—Established 1831.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-park-basin.

RAWDON-HILL and NEW-PARK SPRING STONE.
BRAMLEY FALL AND POTTERNEWTON STONE.
HAREWOOD GRINDSTONES.
SAMUEL TRICKETT, STONE MERCHANT.
Prices and samples furnished. Delivered to any part.
Address—VICTORIA STONE WHARF, ISLE OF DOGS.

CAEN and AUBIGNY STONE.—F. FOUCARD, Stone Merchant and Quarry Proprietor, Quai des Abattoirs, Caen, and at 6, Red Lion-street, Borough-market. Contracts taken for any quantities. Cargoes shipped to order from Caen to any port.

GATES and GEORGE, late LUARD, BEEDHAM, and CO., Caen, Aubigny, and General Stone Merchants Caen Wharf, Rotherhithe, London.—Goods delivered to order, by land or water conveyance, and by ship to any part of the United Kingdom.

BANGOR WHARF, King's-road-bridge, Camden-town. STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welch fire-bricks, ground and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a contrary light, inflict vast injury by their wretched imitations of his productions, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronise his establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear. N.B. The Tariff for 1854 is now ready.
Pimlico Slate Works, 20 and 40, Upper Belgrave-place.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Lining, Skirting, Roofing, Malting Floors, Patent Ridge and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand. Price-lists may be had upon application, either personally, or by post. Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, London.
N.B. Wharf opposite the Wapping Entrance of London Docks.

By Her Majesty's — Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
(DEPOTS.)
Great Western Railway Station.... PADDINGTON
Great Western Railway Station.... BRISTOL.
Hope-street, Mount-pleasant ..... LIVERPOOL.
Castle-fields ..... MANCHESTER.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's-court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

CAEN WHARF, ROTHERHITHE.—GATES and GEORGE beg to invite the attention of Builders, Paviors, and Stone Merchants, to their stock of YORKSHIRE PAVING, and general assortment of stone goods, which are offered at the current prices, and on their usual terms of credit.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.

TWO superior descriptions of GRAVEL, one for Concrete and the other for Road-making, may be had upon application at the Office of the Park Estate, Plumstead, near the Royal Arsenal, Woolwich. Price 2s. 6d. per yard. Delivered into barges alongside Woolwich.

GRAVEL.—WANTED, about 3,000 Yards of COARSE GRAVEL, to be delivered at Paddington or Camden Town.—For further particulars enquire at Messrs. FREND and HAMILL'S, 44, Bedford-row, London.

TO FANCY WOOD MERCHANTS.

VENEER CUTTING-MACHINE (by knife only), by which process double the number of veneers can be produced more than by the ordinary method.—For specimens of work and particulars of price, apply to J. CHACK, Sole Patentee, Veneer Cutting Works, 44, Robert-street (adjoining the King's-road Saw-mills), Chelsea.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machine, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash.

¼-inch Yellow, 17s. per square. ¼-inch White, 16s. per square.
¾-inch " 18s. " 2-inch " 17s. "
1-inch " 22s. " 1-inch " 21s. "
Dantzic Timber, 80s. per load.
Mouldings by machinery in very great variety.
ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.
1st January, 1854.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARD, INO. of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash Sills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico London.

A LIGHT TIMBER CARRIAGE for SALE; has not been in use a week; made to suit a single horse, but will carry two tons: has a nasty board back and front.—Apply to Mr. STRECKS, 2, York-row, Walworth-road. A quantity of joiners' benches, sash-doors, and other effects, for sale or exchange for old scantlings or old cast iron.

ARCHITECTURE, &c.—NOTICE.—The Offices of the Architects', Builders', Civil Engineers', and Machinists' Drawing Classes, conducted by T. J. HILL, will, on and after the 24th inst. be REMOVED from 12, Helmet-row, to 15, Old-street, Goswell-street.—April 12, 1854.

THE ARCHITECTS', BUILDERS', CIVIL ENGINEERS', and MACHINISTS' DRAWING CLASSES, conducted by T. J. HILL, Architect, assisted by Mechanical and Mathematical Masters.—Offices, 15, Old-street, Goswell street.—Evening Classes from SEVEN till FOUR, and Day Classes from SIX till TEN, daily, Saturday excepted.—The following comprise a list of subjects taught: The preparing plans, elevations, and sections; the working drawings of all styles, constructional and domestic; geometry as applied to the construction of roofs, domes, groins, handrailing, &c.; perspective and ornamental drawing as applied to architectural and mechanical drawing; the principles of light and shadow, illustrated by models; the getting up finished elevations and interiors, both geometrical and perspective; the measuring and valuing of artificers' work in all its branches.—Prospectuses to be obtained at the Offices, 15, Old-street, Goswell-street.

TO ENGINEERS, ARCHITECTS, BUILDERS, &c.

ALL KINDS of DRAWINGS accurately COPIED with expedition.—Apply personally, or by letter, post-paid, to T. SMITH, 2, Wade-street, Poplar.

EASTER HOLYDAYS—ATTRACTIVE NOVELTIES.

ROYAL POLYTECHNIC INSTITUTION. Patron:—H. R. H. Prince Albert.—The Seat of the War, showing the principal places on the Danube, Kalafat, Widden, Giurgevo, Sebastopol, the Entrance to the Black Sea, Battle of Sinope, and Destruction of the Turkish Fleet, and other scenes (kindly supplied by the proprietors of the *Illustrated London News*). Exhibited in a New Series of Dissolving Views. Lectures by J. H. Pepper, esq. on the Chemistry of Paper Making, and its duration with Colours, and on Voltaic Electricity, and the Electric Light by Dr. Bachhoffner. Explanation of Models, Machinery, &c. &c. Open Mornings and Evenings, except Saturday Evenings. Admission, 1s.; Schools and Children under Ten Years of age Half-price.

COLOSSEUM, REGENT'S-PARK.—Admission, One Shilling.—The original Panorama of LONDON BY DAY is exhibited daily from half-past Ten till five. The extraordinary Panorama of LONDON BY NIGHT, every evening, from Seven till Ten. Music from Two till Five, and during the Evening.

CYCLORAMA, ALBANY-STREET, will RE-OPEN on EASTER MONDAY, with a magnificent Panorama of Naples, exhibiting the Great Eruption of Vesuvius and Destruction of Pompeii, A.D. 79, with the present state of the Ruined City. These views have long been in preparation, and will be exhibited with all the resources of this vast establishment.—Admission, 1s.; Reserved Seats, 2s. Exhibited at Three and Eight o'clock.

DURING EASTER WEEK, the MUSEUM of ORNAMENTAL ART and SCHOOLS, at Marlborough House, Pall-mall, will be OPEN DAILY, for the inspection of the public. Admittance free.

W. TAYLOR and SON, PLASTERERS and MODELLERS, No. 47, Whittlebury-street, Euston-square, beg to inform all those who require sound and well-finished PLASTERING and effective MODELLING, that they are now ready to execute the same at very low prices, in town or country. ORNAMENT only executed with any material on the shortest notice.

N.B. A large collection on view.

M. AND N. HANHART, LITHOGRAPHERS,

64, CHARLOTTE-STREET, RATHBONE-PLACE, LONDON,

Beg to announce that they continue to execute orders in every branch connected with their Art, and being in daily intercourse with the most eminent Artists in London, any Drawings entrusted to them will meet with that careful attention which is necessary for success.

PORTRAITS FROM LIFE TAKEN UPON STONE, OR COPIED FROM OIL, WATER-COLOUR, AND OTHER DRAWINGS.

Copies from Daguerreotypes, and all other Photographic Productions, executed upon Stone the size of the Originals, or enlarged.

OIL PAINTINGS AND WATER-COLOUR DRAWINGS ACCURATELY IMITATED.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, pendentive or flat, Louis XIV in much variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door caps, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the traces of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, can delabra, and the whole range of interior ornaments, from minute to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

MR. THOMAS TATE'S DRAWING-BOOKS.

Now ready, in post 4to. price, in cloth, 5s. 6d.

DRAWING FOR SCHOOLS:

Containing Expositions of the Method of Teaching Drawing in Schools; a full Explanation of the Practice of Model Drawing after the Method of Dupuis as first practised at the Battersea Training College, the Principles and Practice of Outline and Perspective Drawing, and numerous Illustrations and Drawing Exercises.

By THOMAS TATE, F.R.A.S. of Kneller Training College, Twickenham.

Also, in post 4to. price, sewed, 1s. 6d.

DRAWING-BOOK FOR LITTLE BOYS AND GIRLS:

Containing upwards of 130 Drawing Exercises of Geometrical and Familiar Objects; together with numerous Illustrations of their Methods of Construction.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND REVISED EDITION OF MR. M'CULLOCH'S ACCOUNT OF THE BRITISH EMPIRE

Now ready, the Fourth Edition, revised, with an Appendix of Tables in Two Volumes, 8vo. price Two Guineas cloth,

A DESCRIPTIVE and STATISTICAL

ACCOUNT of the BRITISH EMPIRE: exhibiting its Extent, Physical Capacities, Population, Industry, and Civil and Religious Institutions.

By J. R. M'CULLOCH, Esq.

Notice to the Fourth Edition.—The greater number of the Statements made in this Work on have been revised and many completely to the present time. It has also been checked with a series of Statistical Tables carefully compiled by Mr T. G. Dartot, which comprise a great mass of interesting details.—May 1, 1854.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In fcp. 8vo. price 10s. 6d. cloth; 12s. roan; or 15s. calf.

MAUNDER'S TREASURY of NATURAL

HISTORY; or, a POPULAR DICTIONARY of ANIMATED NATURE: in which the Zoological Characters that distinguish the different Classes, Genera, and Species, are combined with a variety of interesting Information under Heads of the Habits, Instincts, and general Economy of the Animal Kingdom, with a Syllabus of Practical Taxidermy, and a Glossarial Appendix. A new Edition, with Corrections.

Also, all uniform in size and price 10s. each,

MAUNDER'S HISTORICAL TREASURY:
MAUNDER'S BIOGRAPHICAL TREASURY:
MAUNDER'S TREASURY of KNOWLEDGE, AND
SCIENTIFIC and LITERARY TREASURY.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE GARDENERS' CHRONICLE and

AGRICULTURAL GAZETTE

Is, as per large sale, the Paper of Farmers, Millers, and others interested in the Corn Trade, as it is published every Monday afternoon, in time for post, containing a Full Report of the MARK LANE and SMITHFIELD MARKETS of the Day.

In consequence of the Advertisement Duty having been taken off the Government Prices for Advertisements in *the Gardeners' Chronicle and Agricultural Gazette* have been reduced

Advertisements appear in both Editions with no extra charge.

Space of Four Lines and under, both Type	£	s.	d.
Each Additional Line up to Twenty	0	0	6
Every Five Lines beyond	0	2	0
A Column	3	0	0

DESIGNS of CABINET FURNITURE, containing more than 600 original designs, new with a book of Prices, is now ready price four guineas. To be obtained only of SMEE and SONS, Wholesale Cabinetmakers and Upholsterers, 6, Finsbury-pavement, London.

TO MERCHANTS AND OTHERS EXPORTING FURNITURE.

SMEE and SONS' Book of Designs of

Cabinet Furniture, is now ready. It contains upwards of Seven Hundred varieties, of which they have a stock at their Wholesale Warerooms No. 6, Finsbury-pavement, London.

THE FREEMASONS' QUARTERLY

MAGAZINE. New series. Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of five postage-stamps (the cost of postage). Now ready for April, just published

GEO. ROUTLEDGE and CO. Farringdon-street; and
R. SPENCER, 314, High Holborn.

BUILDING LAND TO LET, at very low

ground-rents for ninety-nine years, close to Regent's-park, and on the foot of Primrose-hill, a few minutes' walk from the Railway station for third rate eight roomed houses, for which there is a great demand in that locality, and would readily let or sell. There are some frontages suitable for shops and others for private houses, also some with great depth behind, where work shops or public establishments might be erected.—For plans and particulars apply to F. ELLOART, 9, Harrington-square.

FREEHOLD BUILDING LAND at

TWICKENHAM—8 acres, situate near the Church and Railway Station, with 1,600 feet frontage to Kingston New-road, and with private access to the river Thames at Cross Deep. The land is thoroughly drained by capacious sewer newly constructed, and will be LET or SOLD in parcels, to suit the convenience of purchasers.—Apply, for plan of the ground and further particulars, to JAMES CLARK, 34, Bishopsgate-street, London. N.B. About three acres of the ground consist of a productive well-stocked walled garden, with a large range of substantial forcing houses.

GROUND TO LET, for Building, in the

parish of SHOREDITCH, at the rear of Messrs. Bell and Sons's Distillery, Queen's road, Dalston, in Plots, which will be pointed out by Mr. BARNES, at the Counting-house on the Estate; and in the parish of ISLINGTON, at Grove road, near the Cock, Upper Holloway, in Plots, which will be pointed out by Mr. GREEN, at the Counting-house on the Estate.—Apply for particulars as above, or to D. HUGHES, solicitor, 13 Gresham-street, Guildhall.

HARROW-ON-THE-HILL—FREEHOLD

LAND TO BE LET, on 99 years' building leases, or the Freehold sold in lots, about one acre each, beautifully situated on the rising ground between the station and the village of Harrow-on-the-Hill, about half a mile from either place commanding a large extent of fine scenery, and suitable for gentlemen's residences of a first-class character. The privileges of the Harrow School attach to residents in the place.—Apply to Mr. EDWARD GOTTO, Architect, 35A, Great George-street, Westminster.

BRIGHTON.—A most eligible SITE for

TWELVE HOUSES, part of a bold crescent, TO BE LET on building lease, a moderate ground-rent. The first instalment will be advanced on mortgage. Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery-lane.

BROCKLEY-HILL PARK ESTATE,

close to the Forest Hill Station, on the Brighton Railway. TO BE LET, on Building Leases, for ninety nine years, FOUR most eligible PLOTS of GROUND, at 10*l* ground rent each plot 330*l*. per plot will be advanced, provided a house of approved character of the value of 500*l*. be erected to the satisfaction of the Surveyor. Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery lane.

BUILDING LAND TO BE LET, at

ACTON, HOMERTON, WIMBLEDON, CHERTSEY, close to the Station, SUDBURY (near Harrow), at CROYDON (within a mile of the Station), and at NORWOOD (within three minutes' walk of the Station), and LOWER NORWOOD, near Tulse Hill, admirably situate for building purposes.—For particulars apply to Mr. W. F. LOW, Solicitor, 67, Wimpole-street, Cavendish-square. Leases direct from the Freeholder. Money advanced if required.

NORWOOD.—BUILDING LAND TO BE

LET, within three minutes' walk of the Norwood Station in Wimpole (hereafter to be called Lincoln) Road, South hill, with a full view of the Crystal Palace and Grounds, and only one mile distant, southern aspect, with some of the most magnificent views in the county of Surrey, on which building has commenced, and houses nearly completed for occupation, close to a church. The roads are substantially made, and the water of the South Lambeth Company, from Thames Ditton, laid on to the houses erected. Builders and gentlemen desirous of a first-rate site will find this spot worthy their attention, and advances will be made if required.—For further particulars and plans of the Estate, apply to Mr. W. F. LOW, Solicitor, 67, Wimpole-street, Cavendish-square. Upwards of forty trains stop at the Norwood Station during the day. Leases direct from the freeholder.

CRYSTAL PALACE.—LAND TO LET,

in the Anerley road, directly opposite the Crystal Palace, and close to the new railway station, for the erection of houses with shops if required. Term, 99 or 61 years; lease direct from the freeholder. Apply to Mr ARTHUR TAYLOR, Architect, 18A, Hanover-street.

TO BUILDERS.

FREEHOLD GROUND TO LET, close to

Chalk farm Station, in the Hampstead-road. Money advanced, if required.—Apply to Mr. MOORE, 2, Clifford-street, Bond-street.

GUILDHALL, April 7, 1854.

THE Committee appointed for the manage-

ment and control of the Markets of this City, will MEET at Guildhall on FRIDAY, the 21st APRIL instant, at ONE o'clock precisely, to receive TENDERS for LETTING FIVE WAREHOUSES in Billingsgate market, next Thames-street.—Further particulars may be obtained at the Comptroller's office, Guildhall; or of Mr. JOHN GOLDHAM, Collector of the Markets.

CHARLES PEARCE N, Comptroller, protem.

ENFIELD.—Railway Tickets for Fourteen

Years.—TO BE LET, on Building Leases or SOLD, eligible LOTS of BUILDING LAND, immediately adjoining the Railway Station. The estate is high and dry, and soil is gravel. The roads and drains will be laid down at the expense. FREE passes by railway for fourteen years have been liberally conceded by the Eastern Counties Railway Company to parties building on the estate, viz. for each 50*l*. house one first-class ticket to the Lord of the Manor; and for each 30*l*. house, a second-class ticket to the head of the house.—Apply at the Offices of Mr GEORGE MORGAN, 5, Chancery-lane, or of Mr. A. A. SAWYER, Surveyor, Enfield.

VALUABLE BUILDING SITE of SIX

ACRES on the RIVER THAMES—TO BE SOLD, or LET on BUILDING LEASE, together or in plots, SIX ACRES of FREEHOLD LAND, at Hampton-wick, in the parish of Kingston-upon-Thames, between Teddington Lock and Kingston. This is well worthy the attention of capitalists, being adapted, from the advantages of its situation and soil, for any building purpose whatever. Apply to THOMAS JOHNSTON, Esq. Solicitor, 5, Raymond-buildings, Gray's-inn.

LEASEHOLD GROUND-RENT FOR

SALE, held direct from the freeholder, at a peppercorn rent. Purchase money, 250*l*. and 150*l*. respectively.—For particulars, apply to THOMAS AGGS, 12, Birchin-lane, City.

TO BE SOLD, 10 ACRES of FREEHOLD

LAND, beautifully situated on an eminence in the county of Surrey, within half a mile of the station at Sutton, on the Epsom line. It stands high and dry, and can be easily drained, and there is abundance of brick earth.—Apply to Mr GRITTEN, Surveyor, 8, Parliament street, Westminster.

MONEY on LOAN, at 3*l*. per Cent. per

Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to poor Freemen; the Trustees resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James', St. Martin-in-the-Fields, St. Mary-le-strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 50*l*. is to bear interest after the rate of 3*l*. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk as Solicitor to the Trustees, No 14, Great Queen-street, St. James's Park.

By order,
EDWARD S. TEMPLEMAN,
Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

HOUSE DECORATIONS.—

J. MAC LACHLAN, Painter and Decorative Artist, 25, St. John's-street, and at Clapham-common, informs Architects, Surveyors, and Others, that he is practically acquainted with his trade in all its details, and respectfully requests a trial from these who may wish to have their work nicely executed at a very moderate charge, and punctual to time. J. Mac L. will be glad to make designs for the decoration of rooms, &c. or public buildings, in any part of the kingdom, with estimates.—Tenders for general repairs.

The Builder.

SATURDAY, APRIL 15, 1854.

DIFFICULT as it is to comprehend by what energy and skill the work remaining to be done at Sydenham can be got through by the 24th of May, so much is accomplished during the intervals between our visits, that we have little doubt an excellent show will be made by that time. As the late report stated, the larger fountains cannot be played, in consequence of the impossibility of erecting the new "water-towers" before the expiration of the few weeks that remain. The sculpture for the fountains, for which designs had been procured, is also necessarily deferred: but although these omissions of objects about which expectation had been raised is to be regretted, there will be in every department of the great undertaking, features of interest and educational value, the good effects of which will, we doubt not, be reaped by the metropolis and the country during many years to come. The multitude of works of art already prepared and collected, if not calculated wholly to supply the place of foreign travel to the architectural student, will do much to lessen the deficiency to those who stay at home, while the opportunity of comparison affords a special value of its own.

Before setting down a few notes, on matters most interesting to our readers, let us remark, that the daily papers have of late rendered particular description on our part unnecessary. We can only hail with pleasure any increased attention to art amongst our contemporaries,—if the present improved tone is to be taken as evidence of it. Current opinions, even in subjects with which we concern ourselves, are greatly influenced through the ordinary channels, and we trust that the obligation of writers to understand the questions they discuss will be felt more than it has been,—so that on the one hand, hasty censure of works produced with much time and thought, and on the other, such indiscriminate and extravagant laudation as was witnessed in the case of the building in Hyde-park may be avoided. The opinions of professional architects may reasonably claim the deference which seems generally accorded to those of amateurs, or antiquaries, or ecclesiologists, or other invisible agencies which often work through the columns of the daily press. The prejudices in favour of particular styles set up at one moment and altered the next, and which architects have had no option but that of following this way and that, will, it is to be hoped, be influenced advantageously by the means of comparison which are, for the first time to any great extent, afforded at Sydenham. Though necessarily, still but partial representations of the few forms of architectural expression which they attempt to depict, the Fine Arts Courts may become the basis of much enlightened apprehension of the several points of difference in detail and general principle. In this way they may be of great service, both to architects and to the public.

We cannot but think that the love of real art in architecture would gain more complete hold of the public mind, if one style were exclusively followed to what might be worked out of it; or, supposing that a fresh style should be the result of the present opportunities of comparison, if that only were adhered to. That such a change is possible we think there is some evidence, from what has been occasionally effected by one man. Even the style of Sir John Soane is a case in point. A somewhat different opinion as to the precise tendency of the modern use of styles, may have been quoted in these pages. But we retain the belief that the want of definite direction in style, although it may be deemed unessential to the display of true genius, has much to do with the condition of art at any time. If architecture is ever again to become a breathing art, means must be found by which its inspiration may be caught, not so much by the learned professor or the *virtuoso*, as by the general public. The judgment of merit may rest with those qualified by study and habits of thought; but the *object* of the art is surely, like that of poetry and music, to delight a larger circle of intellect. This its works cannot permanently do, so long as each is treated in a new, or a different language. Ideas themselves become unsettled; technicalities only can be brought before the mind; because the conception of the higher qualities of the art-production is not grasped before another style presents itself.

It was not by a specious show of novelty that were produced at once the highest excellence and the largest popular appreciation that history records, in those arts which chiefly are illustrated at Sydenham. The modern palate, satisfied only with strong drink, can scarcely realise the fact of such minute perception of delicate shades of beauty as existed amongst the ancient Greeks. We may dread, indeed, any turning up of fresh materials, when every discovery is applied not in the manner of capital laid out to interest, but as the latest novelty, attractive from its mere *difference* in form. It is the result of such a practice, that the beauty of mouldings and conventional forms, and of all that constitutes the especial character of our art, is not perceived by those to whom mainly, as we have contended, the art should be addressed. The eye is caught by an extravagance, and the faculty of taste is not called into play.

Yet it would be surely illogical to reason that the endeavour after intimate knowledge of styles, has been altogether erroneous. That "he who has laid up no materials can produce no combinations" is true of the architect as of the painter. But, there is one thing which seems to us most injurious, namely, that partial knowledge which it has hitherto been so difficult to avoid. Architects have been led to devote themselves to particular styles, and the means of comparison have not been easy. Britons as we are, and not the *least* rambling of nations, our professional brethren can take few opportunities of studying architecture but from books, and are not too well acquainted with these. We will not stop to inquire why this last condition of things is what it is,—though we may say, it appears to us that in plans, elevations, and sections, the mode of representation, essential as regards working drawings, has disadvantages never wholly mastered by the architect, however experienced. Even the perspective representation —based on the supposition that the eye is fixed, and takes in all at a glance—is, we venture to say, in some measure deceptive, and untrue to nature. It is clearly so in the case of interiors. Whether photography may supply the deficiency has to be seen.

Examination and comparison are, however, essential to clear impressions of relative merits, and to enable the architect to select that style in which there is most capacity of life, or rather to choose those characteristics of each which can be best combined for a new and harmonious whole.

The architectural courts at Sydenham then may have an advantage both for the public and even the most learned of our professional brethren. That there are, after all, some important omissions in points essential to a full comparison, could hardly, perhaps, be avoided. Columns, in a style of architecture like that of Greece, where greatness of scale was rather exceptional than an important feature of the effort after beauty, are of nearly the same dimensions as those of Egyptian architecture. An avenue of sphinxes a mile long is, necessarily, inadequately set forth in the north transept (under 300 feet); although the 20 feet in length of each sphinx equals the scale of the most important Egyptian examples—the great sphinx, of course, excluded. The gigantic figures, some 70 or 80 feet in height, tell sufficiently the fact of the colossal scale of Egyptian *sculpture*. But models of ancient Egyptians might be placed near the columns of the court, to show by comparison the real size of the original columns.

The world may visit the Roman Court without realising a true conception of the spirit of a style, in which the colossal was such an important element. The Greek Court, again, contends against the fact of a style formed principally by the architecture of exteriors: it is treated as the Greek might have worked with a similar purpose, rather than as he *did* form the structural arrangement of columns and entablatures,—which at Sydenham was that which had to be shown. The Mediæval Court is a museum of sculpture and ornament, but leaves "the long-drawn aisle and fretted vault," lofty nave and tapering spire, unrepresented. And what can we say of the Nineveh Court, where our daring friend who holds possession there, has cleverly elaborated a plausible scheme of polychromy from vestiges less important than were found in Greece,—what should we say, except that on all questions of treatment and caronology of Assyrian architecture, we expect to see it the battle-ground, where Fergusson and Layard will doubtless have to maintain opinions which should not be objected to by us? Whether the upper and lower portions of the Assyrian Court are discordant in character, is a question of taste, although still one to be taken into view in estimating the possible synchronism of dates; but we may remark that the immense antiquity of the bulls and lions of Nineveh, as compared with the architecture of Persepolis, is not to be taken for granted. We have heard a different opinion put forth by Mr. Wornum, in the valuable course of lectures at Marlborough House, and the identity of some of the chief features of the remains at Nineveh and Persepolis, is remarkable.

The architectural courts, indeed, generally are not to be viewed as entire reproductions of works of the styles which they are intended to illustrate. Still we expect much from the investigations to which they will lead. In fact, in the case of the Greek polychromy, and the Alhambra wall and ceiling decoration, opportunities are afforded which existing remains fail to supply. The Pompeian house, moreover, differs from its originals only in some parts of the plan, altered of necessity to allow of the circulation of the crowds which will visit it. Even now, and supposing that unconscious elbows, and more daring fingers, can be held away from the decorations of columns and doorways,—how are the white marble door-sills and the slabs of inter-columns of the peristyle, to be protected from the armed heel of the multitude, without destroying by the protection the effect intended?

As regards the building, generally, and the grounds, we will attempt to do little more just now, than set down the more striking features in the stage of progress which has been reached.

The last bays of the centre transept are glazed in, the great ribs having been erected without further accident, by the aid of a very strong scaffolding, carried up from the ground. The flooring is nearly all laid; the painting is far advanced; the Fine Arts Courts will not be backward; the Horticultural and Natural History departments are being set in order; and of the seven industrial courts under the direction of separate architects, that devoted to French

goods is the only one which is greatly behind-hand. The enclosures to some of these courts display elaborate arrangements of framed quartering in preparation for lath and plaster, which will ultimately receive considerable ornamental enrichment, contrasting with the temporary fittings of the building in Hyde-park. The Sheffield Court, on the west side, immediately north of the Pompeian house, is marked out by a circuit of iron girders on brick piers, as the first step in the execution of the design of Mr. G. H. Stokes, which has been set forth in a coloured lithograph. The Birmingham Court, which comes next, is under the care of Mr. Tite, but is not far advanced; and the Stationery Court, farther north, does not afford much better matter for description. It is in the hands of Mr. Crace, and is, we suppose, being designed by him. The Musical Instruments Court, the farthest south on the east side, from the design of Mr. John Thomas, is, it seems, intended to be an important work of the sculptor's art. Above the arches which form the enclosure are panels for relievos, and circular spaces for medallions, probably of heads of the composers. At the top is a cove and cornice of bold projection. Messrs. Banks and Barry have the court of printed fabrics, next in succession, which also has an arched enclosure; and Mr. Semper has that of woollen goods, which follows. Its present appearance shows that, unlike most of the others, it will be ceiled over, wholly or in part. This will, of course, lessen the light; and that effect has, we suppose, been considered. The enrichments of the architecture, shown on the drawings, are very good. All the courts are entered by doors in each side, and have an enriched front towards the nave. The remainder of the manufactured articles will be in the galleries, and in the wings which project eastward from the ends of the main building. These last are in themselves considerable works.—The machinery will be in the basement. In this department there seems very much still to be done.—Galleries, it will be recollected, do not come up to the nave, as in Hyde-park, except at the great transept and ends of the building; and with the exception of the narrow galleries which there are at the level of the springing of the great arched ribs. Mineral manufactures, hardware, and furniture, will probably be placed in what may be called the aisle, west of the Sheffield, Birmingham, and Stationery Courts. The court opposite the last of the three mentioned, was intended to be for French goods; but our continental friends have not yet placed a stick. We hope for the support of our new allies on May 24th, at Sydenham at least.

At the north wing of the two lately mentioned, much of the work is far behind-hand. The south wing will form the principal entrance from the railway terminus, and is further advanced. The terminus, equal in importance to that of an important town, is nearly completed. It is roofed over in two spans—the valley supported by a range of arches. The great ascent of steps was unavoidable, but will, we fear, be unexpected by some, for whose especial benefit a railway into the building may have been first proposed. Perhaps an inclined plane, and the means of winding up Bath-chairs, might even now be desirable additions to the other complete arrangements for the comfort of all classes.

The main entrance on the west side, will be by an enclosed porch, projecting from the building, and of the full width of the centre transept. The south end of the building has a large space, which is being enclosed as a royal entrance.

There are many points for consideration in the construction. Very thin columns of great height, in the basement story, support the iron girders and half-brick arches, and those which bear the ends of the heavy girders of the staircase have, we hope, been placed after very sufficient judgment. The inclined position of the sash-bars of the arched roofs we should have hesitated about, as liable in some cases to interfere with the ready flow of the wet: some of them are already much injured, in the nailing, at the ends. The wooden gutters also, for a permanent structure, we cannot but apprehend may, ere long, trench much upon the sum for annual expenses. However, it has been the fashion of late to carp at professional opinions; and we have so much to approve of in the undertaking generally, that we would avoid being misunderstood.

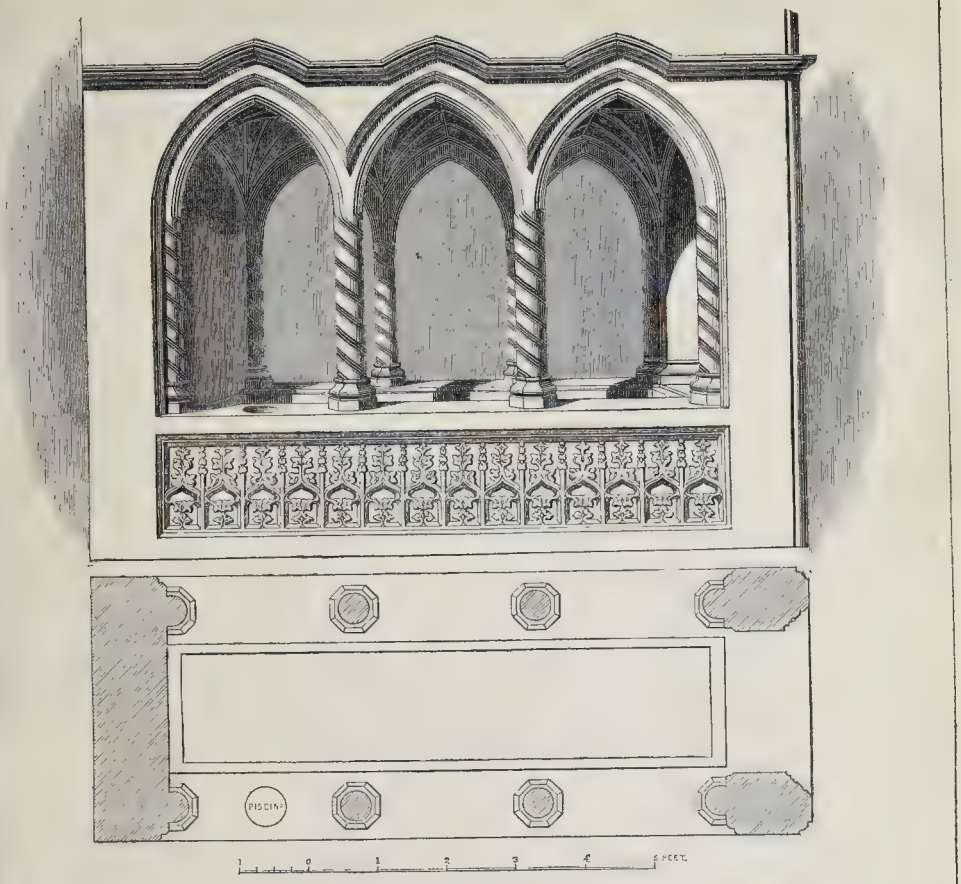
The south transept is beginning to afford a good notion of the effect of the botanical and horticultural departments. Numerous plants and flowering shrubs are grouped in their intended positions about the statue of Charles I. Stuffed animals are lying about, and some idea of what will probably be, after all, the most curious part of the display, is afforded by models in different positions, of individuals of savage races from several parts of the globe, and of the most opposite colours, habits, and physiognomy. What a town of schools will Sydenham become some day, if the use is made of the Crystal Palace that ought to be? Were one George Colman living then, he would surely have no longer to regard *all* the suburbs of London as regions of preparatory schools. The master will again walk with his disciples in the groves of the Academy, and truths in nature and science undreamt of in the Greek philosophy, will be amongst the "common things" of knowledge with the school-boy.

In the nave of the building, some of the larger works have already taken up their positions. The head of the colossal Bavaria is raised upon a lofty pedestal in the south nave. The most prominent object in the north, is the Choragic monument of Lysicrates. Whether this is to remain, may perhaps be unsettled, as the outlines of the monument, and of the horses and figures of the Monte Cavallo, were just lately "offered up" in the central transept. In the north nave, the Toro Farnese, a Gothic tomb, and some Irish crosses are amongst the objects placed.

The value of the wonderful collection of sculpture to students in that art, must be even greater than that of the architecture to architectural students. The casts, grouped with foliage, will also have an advantage in effect which is possessed by few of the originals.

From the elaborate character of internal decoration, the reproduction of which has been mainly aimed at, the public will see for the first time how much labour, and what unstinted outlay, have in all ages, with due consideration, and with a full recognition of economics, been devoted to art. At Sydenham, of course, real marbles are used in the architectural courts, only in some few exceptions, such as those we have referred to, and the coloured marbles of the Renaissance and Italian styles are exhibited by painted restorations.

Much is to be learned in one way or another, from the courts. The wall decorations which bear the authority of the great Raffaelle, beautifully reproduced, will astonish those who have studied at Marlborough House, and see them for the first time. Objects in the same composition are represented, some in elevation and others in perspective, from the most opposite points of sight, and without the slightest regard to position on the panel. Thus, an object represented as seen from above, is just as likely to be found at the top of the pilaster as at the bottom. Circular objects, which should have each side equidistant from the centre, are sometimes not so. We wonder, but we are reminded that the copies are faithful. Everywhere, so far from any strict adherence to the flat style of treatment, the representation of relief by shadow on a plain surface, seems to have been general. If the course lately advocated be the correct one, we may, culling beauty of form and colour from much of the Italian ornament, still effect the production of much in art which shall bear the impress of beauty, and yet possess a character of its own.



But we can merely indicate the nature of the suggestions which everywhere are presented to us. In the decoration of the Alhambra, with its peculiar combination of colour and relief, better presented to us by Mr. Owen Jones at Sydenham, than it could be even in his own careful drawings; in the front of the Parthenon by Mr. Penrose, in the questions raised by the experimental polychromy of the Elgin frieze, the blue back-grounds to sculpture, and to Romanesque and mediæval ornament, we might have suggestions for arguments on some of the principal questions which have to be settled by the architect-artist of this day.

The colouring of the building itself is greatly altered from that of Hyde-park, about which there was so much discussion; the shafts of the columns are painted red, and the result is, as it seems to us (though perhaps part may be due to the form of the roof and other features), that the building appears very much shorter, than it is by the real difference between the two structures. It would be wrong, however, to discuss this before the trees and shrubs, with which the red colour seems likely to harmonize well, are in their places. Any way, the effect of the interior is now very fine, and is so in Mr. Jones's original drawing.

But we must pass outside. The great reservoir at the north end is in active progress; the road and carriage-stands, for which great part of Dulwich-wood has been cleared away; the terrace-gardens and basins, the lakes, cascades, turfed slopes and gardens throughout the large tract of ground, are being proceeded with. The pedestals of the terrace, and of the balustrade which encircles the great fountain, have several marble statues fixed — copies of celebrated works. Next the main walk, opposite the centre transept, and eastward of the great fountain, the ground is prepared in a gradual slope, with steps, down which the water is to flow from ornamental structures at the top, and at the bottom in each case is to fall in a broad sheet over an arcade, into one of the two great lakes below The arcade forms the front of a loggia on the margin of the lake; so that there will be an agreeable place of resort at the back of the sheet of water. The architecture, as we have before now mentioned, is scarcely equal to the merit of the idea. What would not the architect of the water-gate at the bottom of Buckingham-street, Strand, have made of such an opportunity? How would Inigo Jones have delighted in bossy rock-work and weedy rustic-work? There is nothing here but a plain arcade, and a very ordinary cornice.

The lakes just referred to are of some extent. They are enclosed in a sort of amphitheatre, formed by lofty embankments, from which good views of the building are obtained. Beyond the embankments eastward, the tidal lake with its representations of geological formations is nearly completed, and some of the models of extinct animals, of which there will be a considerable number, prepared by Mr. Waterhouse Hawkins, are already in their places. The chief of the models are executed in Portland cement: a few are in stone.

On a mound, on the south side of the grounds, a circular structure is in progress, with columns and large arches. It is to form a rosarium. There is a large extent of ground to the north-east of the building, part of which is still unappropriated. The greater portion is being laid out as gardens. Here is another lake; and a rockery is in preparation.

SEDILIA, HOLY CROSS ABBEY, TIPPERARY.

There are in all three steam-engines, which are in this part of the ground, or near the reservoir. Steam-power is to be used to force the water from the artesian-well into the great reservoir, and to work the fountains in and about the building. The principal fountain, to play 200 feet high, and some others, will have to wait for the great towers.

It may interest our practical readers to learn what material is being used for the lining of the bottom of the great basins, or aquariums, one at each end of the building. Portland cement concrete is employed. Large slabs are cast in iron moulds, from which the slabs can be raised by a travelling crane. They are then laid on a floor of iron girders, and the joints are set and run with cement.—It seems to us that the number of staircases, lessened since the first plan was made, will be found insufficient. It is also perhaps matter for regret, that the company have not been able to establish a large hotel in conjunction with the building. The refreshment places in the neighbourhood are bad and expensive—like many others, indeed, at places of popular resort in the neighbourhood of London. It would be something for the company to achieve, to put an end to the present hotel system; and those who are disposed to use the collection as it might be used, would be glad to spend several days at Sydenham.

The directors may, however, well pride themselves on what they have done, if they are able to place a means of instruction, so powerful and so complete as the collection may become, within the reach of all classes; and more than that, if they raise a salutary opposition to those low vices which in our great cities are the resource of the laborious toiler and dweller in the pestiferous places called "the homes of the poor,"—those vices which are resorted to only because all have persisted in "ignoring," instead of directing and supplying proper aliment for a natural desire.

THE GALLERY OF ILLUSTRATION, REGENT-STREET.

Messrs. Grieve and Telbin have re-opened their gallery with "The Route of the British Army to the Seat of War," combined with their first and most beautiful work, "The Overland Mail." It includes a view of the Entrance to the Dardanelles, from a sketch by Lieut. O'Reilly, and, with the pictures of Constantinople, St. Petersburg, and Sebastapol, will serve to make its visitors better acquainted with the distant lands, now the topics of all talk, than Londoners are with their own "back slums." If Grieve were to paint "London Shadows," he would throw such a light into them that we should have them "flit away, and be no more seen."

SEDILIA, HOLY CROSS ABBEY, TIPPERARY.

The annexed sketch of a sedilia from Holy Cross Abbey, county Tipperary, Ireland, is a specimen of the style of architecture that prevailed in that country, about the latter part of the fifteenth century. It appears to have served for the double purpose of sedilia and piscina, perhaps as a canopy to a tomb also. Its style seems more continental than English, a characteristic which may be seen, from its flamboyant window tracery, to prevail throughout the edifice in which this sedilia is placed. The present floor (composed of loose soil and *débris* of the building), is 2 feet 3 inches from the seat.

The Abbey of Holy Cross in which the sedilia is placed, is situated on the river Suir, about two miles from the town of Thurles, county Tipperary, said to be founded in the twelfth century, by Cistercian monks, in honour of a reputed piece of the "true cross," bestowed on them by Pope Pascal II. the exhibition of which brought them in ample funds, to erect what must have been in its day a magnificent temple and adjoining cloisters. The charter originally granted by King John to the order, endowing it with large revenues, was confirmed and renewed by Edward I., Henry III., Edward III., and Richard II. and continued to flourish until the fifth year of the reign of Queen Elizabeth, at which period it was suppressed, and its extensive possessions granted to the then Earl of Ormond. R. Johnston.

ON A COMMONPLACE HOUSE.

Suppose an architect to have directed his pupils to make designs for the principal floor of a commonplace house, such as are built in rows in London and its neighbourhood, the party-walls being 25 feet 6 inches apart.

He takes one of them.

"Yes," perhaps he might say, "this is a very common arrangement; here is on the first floor a room in front, 25 feet 6 inches by 17 feet, and behind this another room, 17 feet square, communicating with the first by folding-doors."

We will begin by considering the walls. The Building Act determines their thickness, but it is well to understand something of the principles which ought to govern us when we have to determine it ourselves. Soufflot calculated, from experiments made on the usual building-stone of Paris, that a thickness of $3\frac{1}{3}$ lines (French) would have sufficient strength for a building five stories in height; that is, the stone would not be crushed by such a weight. A well-burnt brick is at least as firm as the stone usually employed in Paris. If then $3\frac{1}{3}$ line, or about one-third of an English inch, be sufficient for the thickness of the walls of a lofty house, why should we build them in a brick and a half or two bricks?

In bridges, and in large public buildings with extensive vaults or domes, it is possible that the weight which the material would support without being crushed, may become an element to be carefully considered; but the fact is, that in common houses, and with sound common materials, the architect has nothing to do with it. The strength of his walls, determined from other causes, must always be far greater than would be necessary on this consideration. If we had built a wall half a brick thick and only one foot in height, we should not hesitate to put upon it the whole five stories of a Parisian house. If, however, instead of 1 foot, we had to make it 20 feet high, we should at once be conscious of its insufficiency. The thickness of a wall must, therefore, be in proportion to its unconnected height, *i.e.* to the space between two floors, rather than to the weight it has to sustain.

What, then, are the real causes of the weakness of thin walls? First, lateral action. A moderate blow might destroy any wall of 20 feet high and only 4 inches thick. A cannon-ball would perhaps go through it and do little mischief, but the equal impetus of a larger body in less rapid motion would extend farther, and make the surface bend. As soon as this takes place, whatever weight may be upon it, acts with immense force; for the power of the wall to support weight depends entirely on its perpendicularity; and the moment this is destroyed, the wall buckles and falls. The power of the wind against such a wall is also considerable. The wind is not a steady uniform force, but it acts by gusts, and thus produces a vibration, which diminishes the coherence of the parts; and the wind of one day, which appears harmless, may nevertheless, without any increase of strength, throw down the wall on the day following.

The second source of weakness is in the construction of the wall itself. The bricks are by no means perfect parallelograms; and though their inequalities are in some degree corrected by the mortar, yet still there is enough of irregularity in the bearings to insure the destruction of a very thin wall. This irregularity is greatly increased by the use of bond-timber and wall-plates, for the hardest wood is more compressible than stone; how much more so then the fir timber which is usually employed. On this account, it would be better to place the bond-timber in the middle of the wall, making use of detached wooden bricks for fastening the skirtings and the door and window-frames, and to employ oak or stone templets under the girders, without any continued floor-plate. Bond so placed could hardly be destroyed by fire; and even if so destroyed, would not sensibly weaken the wall. Modern practice seems often to make iron hoop, or something of the sort, supply the place of bond timber; but we want a material less flexible across the openings. Plugging, in order to fix the woodwork, introduces an inequality of pressure, and is therefore a source of weakness.

The third circumstance injurious to walls arises from the weakness of the floors which they have to support. If a floor be perfectly firm, it rather adds to the strength of the wall by its steady pressure; but if it vibrate with every motion, these vibrations are communicated more or less to the wall, and tend to loosen the cohesion of its parts. If the joists or girders take a permanent set, this presses laterally against the top of the wall; and though by their adherence to the wall they may at first act as ties, yet, as parts of the woodwork decay or lose their hold, this effect ceases. While the cohesion is perfect, the tendency of the insufficient girder is rather to draw the wall inwards: when that is destroyed, the tendency is unequivocally to force it outwards.

I have said that the thickness of a wall ought rather to depend on its free height (*i.e.* on its height between any lateral connection with other parts of the building) than on the weight put upon it. Observation, rather than direct experiment, must determine what the proportionate thickness ought to be. I should be disposed to say that it should not be less than one-twelfth of this free height in an external wall: Internal walls may be thinner. It may, perhaps, be asked, whether, as the weight is indifferent, we are to make the walls of a warehouse, or of some great inn, of many stories, each perhaps 9 feet in height, no thicker at the base than at the top? This, I apprehend, would be carrying the theory too far. The higher the wall, even if divided at regular intervals into stories, the greater the chance of lateral action; especially of that of the wind; and besides, the connection of the wall with the rest of the house by successive floors, although it greatly adds to its strength, yet does not entirely counteract the various sources of weakness arising from its greater height. A wall 36 feet high and 9 inches thick would doubtless be very much stronger if divided into four stories than if carried up without any connection to the roof; but the defects arising from inequality of materials, and especially from the use of bond-timbers, would still be in proportion to the whole height.

One word more about the bond. We have recommended its use simply as bond, trusting to the occasional insertion of wooden bricks to form points of attachment for the joiner's work. As bond, its office is to remedy any slight inequalities in the foundation, or in the work itself; to obviate any defect arising from the inequality of pressure occasioned by the openings, and to connect the sides of the openings, so that, in the settlement of the brickwork, they should neither spread nor converge. For the last object, perhaps the shape of the bond is not of much consequence, but in inequalities of settlement, the disturbing action is vertical, and the principal scantling should be vertical also. One bond-timber occupying two courses would have more efficacy than four pieces of the common form of $4 \times 2\frac{1}{2}$.

A first floor implies a wall below as well as that which forms its own boundary, and I have therefore given above some notices of what the floor is to rest on, before describing the floor itself.

What is the nature of the proposed floor? *A triple-framed floor.* Well, but why *triple*-framed? The object in making a floor double, or at least one important object, is the prevention of sound from the upper to the lower; but this is as well obtained by the ceiling and floor joists attached to the girder, as by the additional intervention of binding-joists. It is true, that in this way the boards would lie in the same direction as the girder, and consequently, in many cases, across, instead of along the room, but in our present mode of covering the whole with carpets, this seems to be of little consequence.

The strength of a piece of timber placed horizontally to support a given weight, is in proportion to its thickness multiplied by the square of its depth and divided by its length. As, however, the weight to be supported may fairly be assumed to be in proportion to its length, we shall have for the formula to express the required strength $\frac{bdd}{ll}$; that is, the breadth multiplied by the square of the depth, and divided by the square of the length between the points of support. If we can determine by experience what this will be in any one case, we may discover what it will be in other similar cases.

Much has been written on the strength of timber, but the theory has rested on experiments derived from its tenacity and its resistance to crushing, on neither of which the sufficiency of a floor has any direct dependence. The knowledge required by the architect is its opposition to bending under a transverse strain; and on this point again we have experiments with which he is not concerned. We are told how much will *break* a piece of timber. What we want to know is, how much will bend it. If in a room like that before us, where the bearing is 17 feet, a beam will bend half an inch under any probable weight, it is manifestly unfit for its purpose. Experiments of this sort would not be expensive, because the object is not to destroyed or even injured; yet I believe they have nowhere been carried out. The result of general experience, independent of any particular experiment, where the ends are entirely loose, is that the depth of a joist 2 inches wide should be about one-sixteenth of its length. Two inches seems sufficient width for a joist for all practical purposes, such as holding the nails firmly, and maintaining itself in a vertical position; and as much more strength is obtained by depth than by width, it is important not to increase the latter needlessly. In a house built for General Benthan, by Edmund Aikin, I think at Highgate, the thickness of the joists was only $1\frac{1}{2}$ inch; and perhaps this may be enough. The thinner the joist, however, the more weakness is to be apprehended from knots and other irregularities of structure, and the more tendency there is to twist. I therefore assume 2 inches as a probable medium for a joist where the bearing is not more than 17 or 18 feet. In our supposed room, where the bearing is 17 feet, or 204 inches, the depth would be 204 divided by 16, or $12\frac{3}{4}$ inches. If this be correct, the general formula thus deduced

$$\frac{bdd}{ll} = \frac{2 \times 12\frac{3}{4} \times 12\frac{3}{4}}{204 \times 204} = \frac{325}{41616}, \text{ or } \frac{1}{128}$$

nearly, rejecting minute fractions; and we may take this as a constant expression applicable to floor joists not fixed at the end.

Proceeding from this as a fact established by experience, we may apply it to any simple joist of other dimensions. Thus, if we wish the thickness of our joist to be $2\frac{1}{2}$ instead of 2 inches, the length remaining the same, bdd would still be 325; but to find the value of d^2 we must divide this by $2\frac{1}{2}$, when d^2 comes out 130, and $d = 11\frac{1}{2}$. If the joist is to be only $1\frac{1}{2}$ inch thick, we find 325 divided by $1\frac{1}{2}$ to be 216, the square root of which, equal d, is fifteen nearly, the depth of the joist in inches. If with 2 inches we have a bearing of 15 feet instead of 17 feet, $\frac{bd^2}{l^2} = \frac{2d^2}{32400} = \frac{1}{128}$, and $d = \sqrt{127} = 11\frac{1}{4}$.

All this is supposing the joist to be perfectly free at the ends. If perfectly fixed, it would have double the strength; but this perfect fixing can only be obtained by carrying the joists beyond the point of support, and there making it secure. If so fixed, then we must have a different formula, twice as great as the previous one; that is, $\frac{bd^2}{l^2} = \frac{1}{256}$, where d would be equal to 9 inches. It would appear, then, that where the ends are perfectly secured, the length of bearing, divided by $2\frac{1}{2}$, will give a sufficient depth. In applying these calculations to practice, we must consider that even in bridging-joists we cannot depend on the ends being firmly fixed in every joist, and that in common joists a considerable degree of security is obtained by framing and spiking into the wall-plate. I should say, therefore, that in the latter case the formula might be reduced to $\frac{bd^2}{l^2} = \frac{1}{162}$, and the depth $\frac{1}{18}$ of the bearing, and in the

former, $\frac{bd^2}{l^2} = \frac{1}{221}$, and the depth $\frac{1}{21}$ of the bearing. In large timbers some other considerations occur, which I shall hereafter revert to.

Our formulas would again have to be altered if the joists were placed very far apart, or very near. I assume them to be 12 in. apart. In a room 25 ft. 6 in. long, we should thus require twenty-three joists, each $11\frac{1}{2}$ in. deep$\left(\frac{204}{18}\right)$, 2in. wide; and supposing them to extend at each end 9 in. beyond the bearing, 18 ft. 6 in. long; and the quantity of timber in the whole would be 67 cubic feet.

We will now proceed to consider the quantity of timber in a double floor, where the joists rest upon a single girder. Such a girder, where we are not limited by the Building Act, would have to support half the weight of the floor, the other half being supported by the walls. As much, therefore, would rest upon it as upon twelve joists; and as the ends are not secured, the equation must be twelve times as great as that of a joist similarly placed, or, $\frac{bd^2}{l^2} = \frac{12}{128}$. We may suppose b, in this instance, to be 12 inches, as a common thickness for girders: d^2 would then be 325, and $d = 18$; and the quantity of timber 18 ft. 6 in. × 1 ft. 6 in. × 1 ft. = 27 ft. 9 in. The bearing of the joists would be 12 ft. 3 in. perfectly fixed at one end, imperfectly at the other. Taking the depth at $\frac{1}{21}$ of the bearing, it would be $7\frac{1}{8}$ in., and there would be fifteen of them, each 27 feet long—$27 \times 7\frac{1}{8} \times 2 \times 15 = 41$ ft. 7 in. the amount of timber in the floor-joists; which added to the 27 ft. 9 in. of the girder, would amount to 69 ft. 4 in. without the ceiling-joists, and with the somewhat impracticable depth of 18 in. for the girder.

The Building Act will, I believe, not permit the common joists to enter into the party-wall. Within its limits, therefore, the girders would have to support the whole floor; and we cannot have fewer than three, which may be thus spaced:—

2·3	1·0	9·0	1·0	9·0	1·0	2 3

The spaces between the outer girders and the party-wall being one-fourth of that between the girders, the oversailing portion of the joists would have the same strength as the intermediate parts; but they may be connected at the ends by a 1-inch plank placed against the wall. The extent of floor supported by the middle girder would be as much as would rest on nine joists; the equation of strength for the girder will therefore be $\frac{bd^2}{l^2} = \frac{9}{128}$; and b being 12, and l as before 20½, d turns out to be 15½. Now 18 ft. 6 in. × 15½ in. × 12 in. = 23 ft. 11 in. in each girder; and there would be in the three girders 71 cubic ft. 9 in. The joists in this case are 25 ft. 6 in. long, perfectly fixed; and $\frac{108}{21} = 5\frac{1}{4}$ in. will be the depth of the joist; $25{\cdot}6 \times 5\frac{1}{4} \times 2 = 1$ ft. $10\frac{1}{2}$ in. in each joist; and, as before, there would be fifteen of them, the whole quantity of timber in them would be 27 ft. 10 in.; making in all 99 ft. 7 in. The side girders would not have as much floor to support as the middle one; but that at one end would have to sustain the hearth-slab and its supporting arch; I shall not, therefore, enter into the calculation of what small saving may be made in this respect.

As 15½ in. is, however, rather an inconvenient depth for a girder, I will assume that we have four girders instead of three. These we should space 6 ft. apart, each supporting as much as five joists. Then $\frac{bd^2}{l^2} = \frac{5}{128}$; and the other dimensions remaining the same, d becomes $11\frac{1}{2}$ in. or we may call it 12 in. Then 18 ft. 6 in. × 1·0 × 1·0 = 18 ft. 6 in. cube, in each girder, and 74 ft. in the whole number. Again, the bearing of the joists is 6·0; $\frac{72}{21} = 3\frac{1}{2}$ in. and 25 ft. 6 in. × $3\frac{1}{2} \times 2$ = nearly 1 ft. 3 in. in each joist, and 18 ft. 9 in. in the fifteen. This added to that in the girders, amounts to 92 ft. 9 in. If we allow for the ceiling joists three-fourths of the quantity of timber in the floor-joists, we shall find the whole quantity of timber in a floor where there is only one girder, and where, consequently, half the weight rests on the side walls, to be

	Ft.	In.
Girder	27	9
Floor-joists	41	7
Ceiling-joists	31	3
	100	7

If we admit three girders, the quantities will be—

	Ft.	In.
Girders	71	9
Floor-joists	27	10
Ceiling-joists	20	10
	120	5

If there are four—

	Ft.	In.
Girders	74	0
Floor-joists	18	9
Ceiling-joists	14	10
	107	7

I apprehend that in these calculations I have given more strength to the girders than is usually thought necessary. My object has been to obtain an equality of strength in all parts; but in most floors the girders would be the first to give way, if the whole surface were loaded, to the destruction of the structure. In a house such as I am noticing, three out of the four girders might pass uninterruptedly from front to back, and thus gain a strength which would compensate for some diminution of the scantlings.

In a triple-framed floor, the girders remain as before, or rather they should be a trifle larger, for the floor itself is heavier, and some strength is lost by the framing: the bridging and ceiling-joists would be nearly the same. The binding-joists, then, are merely so much added to the quantity of timber without any accession of strength. I will not pursue this subject any further: enough has been said to show the great difference between the simple and more complicated floors, in the quantity of timber employed. It may be necessary to employ the latter, but the architect ought to understand what it costs.

I have said nothing about trussing the girders, simply because I know nothing about it. Tredgold maintains that it is of no use; but the experiments made by Mr. Barlow at the Royal Military Academy, on which he depends, lead to the palpable absurdity, that a king-post truss may be attended with some slight advantage, while a queen-post truss entails a considerable loss of strength. The scantlings employed were much too small, only 2 inches deep and $1\frac{3}{4}$ inch broad; and one can hardly understand, in such a case, what the size of the trussing-pieces could be; and the cutting and framing could leave no sufficient solidity of materials. Perhaps better-conducted experiments may since have been made, but I am not aware of them.

I have said nothing of trimmers and trimming-joists, but in the two latter-described floors I have disposed the girders so as to have no need of them to the chimneys, nor I think to the opening for the stairs. Nor have I inserted any caution, which nevertheless is of some importance, that where joists or girders rest on a middle partition, that partition ought to be of the same material as the surrounding walls.

There is one circumstance still to be mentioned connected with the strength of timber, though it hardly comes into play in such a house as that before us. When timbers become very large, whether naturally so or built up, they require a greater proportional strength. It will readily be perceived, that a stick 1 inch square, placed over two supports at the distance of 100 inches, would remain without any sensible curvature; but that one of ten times these dimensions, *i. e.* 10 inches square, and with a bearing of 83 feet 4 inches, would swag very much, and almost perhaps break by its own weight. The strength of a material, where the forms are similar, is in proportion to the squares of the linear dimensions; the weight in proportion to their cubes. For example, if b and d be each 1, and $l = 10$, then the formula of the strength to resist a given transverse strain $\frac{bd^2}{l} = \frac{1}{10}$. Multiply each dimension by 10, and $\frac{bd^2}{l} = \frac{1000}{10{\cdot}0}$, or 10. In the first instance, the weight $bdl = 10$; in the second, 10,000.

On the boarded floor I have little to remark. The edges of the planks are sometimes tongued and grooved; sometimes a little under-cut and edge-nailed; sometimes rebated and laid on slips; the object being to prevent any open joints through the floor, or to fix the boards firmly, without showing the nails. They might be made of thinner stuff, and laid of two thicknesses, crossing each other; and in a case where there are no joists, or where the joists are covered with plaster, such a floor might be independent of fastenings, the edges being merely covered and kept down by the skirting. Such a contrivance, however, can find no admission at present into a *Commonplace house.**

J. W.

NOTES OF DOINGS IN IRELAND.

WE are told that a new cathedral is to be erected at Ballaghadereen, county Mayo, from the designs of Mr. J. G. Butler, Architect, Dublin; and that the plan provides accommodation for a large congregation.

Her Majesty's Board of Ordnance has determined on erecting twenty-six towers and batteries on the eastern coast of Ireland, in the neighbourhoods of Bray, Dalkey, Killiney, Sutton, Balbriggan, &c. At the present crisis this further fortification of the Irish coast has given rise to much *gossip* in the localities where the works are intended.

St. Mel's' Cathedral, at Longford, is to be finished. The skeleton of the building has been already erected, and we hear that the new works are entrusted to Mr. Bourke, architect. It is proposed, we believe, to expend about 3,000*l.*

The long-talked-of Custom-house and Post-office buildings at Belfast are now in a fair state of being matured. The plans have been prepared by Mr. Lanyon, and proposals for erection are being received.

The contemplated church of St. Bridget, Rowlestown, is to be built, and the plans have been lodged in Dublin for inspection of contractors.

The original site of the Magee College, at Londonderry, has been changed from Sir Robert Ferguson's to the field immediately opposite, and will be built at an elevation of about 60 feet above the level of the river, with the entrance front facing Rosse's-bay. The plan forms three sides of a quadrangle, with a frontage of about 195 feet, and a return on the northern flank of about 380 feet. On the principal story is a groined entrance-hall, 28 feet by 16 feet, formed in a central tower about 72 feet high, with semi-octagonal buttress, surmounted by crocketed pinnacle and finial at the side, and having principal staircase, reception and porter's rooms off same. To the left is the examination-hall and library, a spacious apartment, 68 feet long by 32 feet wide in narrowest part, and 42 feet high to hammer-beam of roof, which is to be open timber work, stained and varnished, constructed with one central and two side semi-arches, resting on corbels. This room is designed to contain 500 persons, and occupies one entire side of the building, being lighted from three sides, by double tiers of windows, with perpendicular tracery in the heads and transoms. To the right of entrance-hall is a corridor and students' staircase, with separate class-rooms for 100 students and 75 ditto respectively, robing-room, water-closet, &c. The first floor comprehends a museum with a corridor leading to class-rooms for 50 students and 150 students respectively, laboratory, &c. The north wing of basement contains porter's living and bed rooms, furnace, and heating apparatus-rooms, &c. &c. Wings of about 24 feet wide, finished with gables and flanked with pinnacled buttresses terminate the ends of entrance elevation, which consists of central

* To be continued.

tower and pseudo arcades carried up two stories and terminated by Gothic arches with hood and label mouldings, &c. The exterior will be of cut stone, with tooled and chiselled plinth course buttresses, mouldings, &c. It is expected the expenditure will be about 20,000*l.* Mr. Gribbon, of Dublin, is the architect, his designs having been selected in competition. The builder is not yet engaged.

THE CHURCHES OF LONDON.

THE interest which was excited by the view we published of the twenty-nine churches in the City of London threatened with demolition (p. 43, *ante*), leads us to think that views of the whole of the City churches will be acceptable, and we have accordingly thrown together on the opposite page twenty-two of these, and propose to give the remainder on another occasion.

Although we cannot exactly say of the churches of London as of a vast number in leafy England,—

> "How beautiful they stand,
> Those ancient churches of our native land!
> Amid the pasture fields and dark green woods,
> Amid the mountain clouds and solitudes;
> By rivers broad that rush into the sea;
> By little brooks, that with a lisping sound,
> Like playful children, run by copse and lea!
> Each in its little plot of holy ground," -

Still they have each a story and a beauty of their own, and well deserve attention.

No. 1. shows the Temple Church, the circular portion of which was founded before the year 1185, in which year it was dedicated by Heraclius, patriarch of Jerusalem. The oblong portion now used for service is a beautiful specimen of Lancet, or Early English architecture, of the thirteenth century. The connection of this church with the Templars, the effigies in the "Round," and its story generally, must be known to most of our readers.

No. 2. St. Mary Magdalen's, Old Fish-street-hill, was burnt in 1666, and rebuilt by Wren in 1685, for the united parishes of St. Mary and St. Gregory.

No. 3. St. Alphage's, London-wall, was rebuilt in 1777, by Mr. Staines (afterwards knighted), retaining the lower part of the ancient tower, which may be seen inside. Mr. George Dance, jun. is said to have been the architect, but this is uncertain.

No. 4. Allhallows, Barking, is one of the most interesting old buildings in the metropolis, and contains several curious brasses and monuments. It is one of the few churches in the City which escaped the Great Fire.

No. 5. The Church of St. Magnus, London-bridge, has one of the best of the City steeples. The body of the church was built by Wren in 1676, but the steeple was not erected until 1705. The old church was one of the earliest victims of the fire. It contains a tablet to Miles Coverdale, —under whose direction the first complete printed English version of the Bible was published,—and some curious pictures in the vestry-room.

No. 6. St. Bartholomew's the Less, within the precincts of the hospital, has a curious interior, built by Dance in 1789 (who first destroyed the old building), and restored by the late Mr. Hardwick in 1825.

No. 7. St. Mary's, Aldermanbury, was burnt in 1666, and rebuilt by Wren as we now see it. Here lie the remains of the merciless Judge Jefferys.

No. 8. St. Benet's, Paul's-wharf, suffered like the last in 1666, and was rebuilt by Wren in 1683. Inigo Jones was buried in the old church.

No. 9. Christ Church, Newgate-street, is another of Wren's works, commenced in 1687 and completed in 1704. Here lie the remains of Richard Baxter, the well-known Nonconformist, and the learned Trapp, once its minister, still exhorts his congregation by his tomb,—

> "Though dead I preach; if e'er with ill success
> Living, I strove the important truths to press,
> Your precious, your immortal souls to save,
> Hear me, at least, oh! hear me from the grave."

Nor would we overlook the tablet to John Stock, many years a painter at the Royal dockyards, who left 13,700*l.* for the promotion of religion and virtue, and the advancement of literature.

No. 10. St. Martin's, Ludgate, preserves the memory of the ancient gate. The old church was burnt, and Sir Christopher rebuilt it. The inscription on the font is a palindrome.

No. 11. St. Botolph's, Aldersgate, reminds us of another of the City entrances. It escaped the fire, but had become unsafe in 1790, and was then for the most part rebuilt at a cost of about 10,000*l.* The front next Aldersgate-street, merely a screen, is quite modern. Within the church there is a Gothic altar-tomb to the wife of Sir John Packington, 1563; and a cameo bust by Roubiliac to "Elizabeth Smith."

No. 12. St. Margaret's, Lothbury, stands over the ancient Wall-brook. Wren rebuilt it after the fire of 1666. The font is attributed to Grinling Gibbons.

No. 13. St. Peter's, Saffron-hill, is one of Sir Charles Barry's earlier works. It was built by Messrs. Souter, and cost, including schools, below 10,000*l.* The neighbourhood is "famous."

No. 14. St. Bride's, Fleet-street, was founded in very early times, as were most of those already mentioned; and here were buried Wynkyn de Worde, and Sir Richard Baker, who wrote "The Chronicles of the Kings of England." The church was rebuilt by Wren between 1680 and 1703. The steeple is second only to that of Bow. It was shortened 8 feet in 1764, when injured by lightning. Richardson, the author of "Sir Charles Grandison" and other works, lies buried here.

No. 15. St. Lawrence's, Jewry, was commenced in 1671, by Wren, the old church (and there was one here as early as 1293) having been destroyed by the fire. The details of the façade next King-street deserve examination. There is a memorial of Archdeacon Tillotson, who was buried here in 1694. The vestry-room is handsome, and has some pictures.

No. 16. Allhallows, London-wall, escaped the fire of 1666, but becoming dilapidated, was taken down, and the present church was built under the direction of Dance, the younger, between July, 1765, and September, 1767. The interior is a good specimen of,—what to avoid. Beloe, the translator of Herodotus, is buried here, and "Mr. John Patience, architect."

No. 17. St. Botolph's, Aldgate, was founded as early as William the Conqueror: it escaped the fire, but was pulled down in the following century, and the present structure was erected from the designs of George Dance, at the cost of 5,536*l.* 2s. 5d. There is a monument with sculptured effigy to Thos. Lord Darcy and Sir Nicholas Carew, both beheaded.

No. 18. St. James's, Duke's-place, was built in 1727, in the place of one consecrated in 1622-3.

No. 19. Trinity Church, Gough-square, is a modern structure of brick, built by Messrs. Haward and Nixon, from the designs of Mr. John Shaw. It was commenced in October, 1837, and finished in June, 1838. The body of the church is a hexagon, 47 feet 6 inches in diameter, with an octagonal recess, forming the chancel.

No. 20. The Church of St. Catherine Cree, Leadenhall-street, is a very curious structure of mixed style, rebuilt, as it is thought, by Inigo Jones. The old church, wherein Hans Holbein was buried, was pulled down with the exception of the tower still standing, in the beginning of the 17th century, and the present structure was consecrated by Bishop Laud in 1630-1. There is a monument to Sir Nicholas Turogmorton, 1570; and a tablet to one Richard Spenser, who having seen great changes, the plague and the fire, left behind him "a good name, a deare wife, a vertuous example, and three daughters."

No. 21. St. Peter's, in the Tower,—St. Peter, in chains,—is a romance in stone, a tangible piece of the history of England. Here lie the remains of many who lost their lives for not thinking as those who were in authority did. The church was built at the end of the thirteenth or beginning of the fourteenth century, but the windows, &c. are of a later date.*

No. 22. Wren's greatest work, St. Paul's Cathedral, the crowning glory of the City, has the finest outline, perhaps, of any building in the world. It is to be hoped that the corporation will strain a point to keep a clear space at the end of New Cannon-street, so that this noble exterior may be seen. We are well aware that it is not a trifling sacrifice on the part of the corporation which is being asked for,—the whole plot in question would probably produce 50,000*l.* or 60,000*l.*—but it is so important to maintain the open space, that we again commend the matter to their most serious consideration.

OPENING ST. PAUL'S.

OUR OPEN SPACES.

ALTHOUGH your attention has been already called in a very sufficient manner to the opportunity which now exists of preserving one of the finest *coup d'œils* which Europe can afford, I feel sure that you will allow me to follow in the steps of a fellow-citizen, in urging, through your columns, the attention of those in whose power the matter rests, and endeavour to enlist the warmest sympathies of the passing public in favour of the suggested openiug to St. Paul's.

I am so far utilitarian, that I confess I do not shudder at the idea of removing some of the city churches which may now be useless, or even of sacrificing Temple-bar, the time-honoured boundary of the City, if the public convenience will be thereby promoted; but I do earnestly desire, where no public inconvenience will result, that the few master-pieces of art which we possess should be displayed to the best advantage; and that we should have some of those spirit-stirring monumental effects which are unhappily so few in this vast but smoky and somewhat monotonous metropolis; for whilst in population and material riches no capital in the world can vie with us, there are few indeed of the great continental capitals that cannot produce more and finer points of view, more noble and striking grouping of monumental works, than we can.

I, sir, am also a citizen in the most literal sense of the word. I was born, and have lived, and still am located in a narrow City-lane, but I am proud of the great architectural beauties which the City contains, and regret that they should be shut up and concealed as they are. I know from my intercourse with my neighbours, that there are many who take the warmest interest in this matter; and I believe that not only their sympathies but their purses would testify to their earnest desire to preserve, for the admiration of generations to come, the magnificent perspective of St. Paul's which is now opened up to us, and which it would be a reproach to us again to shut out from view. EDWARD I'ANSON.

* We may refer those who desire fuller particulars of these buildings to "The Churches of London." By George Godwin. 2 vols. 8vo. with plates.

CHURCHES IN THE CITY OF LONDON.

THE PREVENTION OF SMOKE.

INSTITUTION OF CIVIL ENGINEERS.

On the 4th inst. the first paper read was "On the Prevention of Smoke in Engine and other Furnaces," by Mr. James Simpson, jun.

The annoyance of smoke incidental to the increase of habitations and to the extension of manufactures, in all cities and large towns, had been noticed reprehensively even as early as the time of Charles II. in whose reign it was proposed to legislate on the subject, and in 1697 Dr. Papin devised a scheme for forcing air down a pipe immediately above the incandescent fuel, to induce more perfect combustion.

The attention of parliamentary committees was devoted to the subject in the sessions of 1819 and 1820, and again in 1843, when a very complete history of the subject was given in the report, with a clear recapitulation of the scientific evidence, recommending a freer admission of air to the furnaces as the "great, if not the only principle, for preventing smoke." In 1845, two other committees reported, "that opaque smoke issuing from steam-engine chimneys might be so abated as no longer to be a public nuisance;" and in 1853 the "Smoke Nuisance Abatement Act" was passed, and was ordered to come into force in August, 1854. This Act renders it compulsory on owners of engines and furnaces to provide means for preventing the emission of opaque smoke, and it applies also to steam-vessels navigating the Thames above London-bridge.

The paper took no step towards a solution of the difficulty beyond advocating the employment of anthracite and Welsh steam coal, not only on account of the absence of opaque smoke, during their combustion, but also on the ground of the economy arising from their great evaporative power.

A second paper, "On the Management of Furnaces, and the Prevention of Smoke," by Mr. C. Wye Williams, was read.

The object of this communication was to endeavour to remove the mystery which had hitherto obscured what was asserted to be one of the simplest and best understood processes of nature, namely, the combustion of the gaseous products of coal. A short analysis of the chemical details connected with the subject was given, to show that the existence of flame did not imply the combustion of gas,—that it was but the preliminary state of high temperature of the numerous atoms of the carbon of the gas, which was caused by the intense heat, produced by the combustion of the other constituent—the hydrogen.

In effecting the combustion of the gas generated from the coal in a furnace, the first process was merely mechanical, and consisted in bringing the atoms of the gas and those of the air into the most intimate state of mixture; such mixture being the *sine quâ non* of subsequent chemical union. The mode or means by which this chemical admixture could be effected in the most rapid and intimate manner involved all that art or human ingenuity could do towards producing perfect combustion.

As to the mode of effecting this mixture, or of bringing together the atoms of air and gas, reference was made to the Argand gas-burner, as supplying a good illustration; the only difference being, that in the Argand burner, the gas was projected among the air in numerous small jets, or films; whereas, in the furnace, the process was reversed, the air being brought to the gas, in a similar manner, by means of numerous orifices.

In both cases the effect was identical, and might be compared to the rose of a watering-pot, or of an artificial "*jet d'eau*;"—namely, the producing, on the instant, the largest area of surface for mutual and atomic contact. Models and drawings were exhibited, showing the facility and simplicity with which, both in land and marine furnaces, hundreds of small orifices were introduced, so as to effect the most intimate mingling of the air with the gaseous products of combustion.

It was stated, as the result of considerable experience, that it was a matter of perfect indifference in what part of a furnace or flue the air was introduced, provided this all-important condition was attended to, and satisfied—namely, the effecting the mixture of the air and the gas before the temperature of the latter was reduced below that of ascension or kindling. This, according to Sir Humphrey Davy, should not be under 800° Fahr. as ignition could not take place at a lower temperature,—that fact being the principle of safety in the miner's lamp.

Previously to the introduction of the tubular, in place of the flue system, in marine boilers, it had been supposed, that the introduction of the air, on the Argand principle, by a perforated plate, behind the bridge, satisfied all that nature required, in producing perfect combustion.

The next point considered was, as to the quantity, or gross volume, of air required, and the area of aperture necessary for its introduction. On this head, it was stated, that a great practical error had been frequently committed, as it had been stated that it would suffice if the aperture should be equal to $1\frac{1}{2}$ square inch for each square foot of fire surface in the furnace, in the case of single furnaces; and of but half a square inch, or ·5-inch for each square foot of grate-bar surface, in case of double-furnaced boilers.

These proportions were now asserted to be wholly insufficient, and in fact, were not sufficient to allow of one-fourth the required quantity of air to pass. In practice, it had been ascertained, that for bituminous coal, from 4 to 6 square inches were required, for each square foot of furnace; and, for anthracite, from 2 to 4 square inches, according to the quality of the coals, and the amount of draught.

Cleansing Smoke.—We have seen an arrangement in operation at Earles-court, Old Brompton, whereby the smoke is beaten by wheels into water, and escapes almost transparent. The patentee proposes to use the carbon left in the water commercially. The arrangement is simple, and the advantage would seem to be very considerable.

At Leeds a meeting has been held, convened by the Leeds Engineers' Smoke Prevention Society, whereat the object of the society was stated to be to promote the consumption of smoke, but at the same time to defend such of its members who may be summoned, as they deem unjustly, for non-consumption of smoke. On any member receiving a summons, a deputation of the committee are to proceed and examine into the circumstances, and if after such examination they consider that the causes were beyond the control of the person charged, then he will be defended at the expense of the society; but if the non-consumption of smoke arose from neglect, then the person charged is to be left to bear the consequences. As to the remedial agents to be employed, the opinion expressed was unanimous that all the apparatus now in use was comparatively worthless. By the application of smoke-consuming apparatuses in the furnace, the draught was deteriorated. By deteriorating the draught they necessited harder firing, and consequently a greater consumption of coal, whilst by checking the current they produced a more rapid action upon the boiler bottoms, involving greater liability to accident from explosion, and adding a material item to the cost of wear and tear. "Those evils existed under careful management, and pertained to all smoke-burning patents yet in use, and when they were not so attended to the evils were considerably increased. The most effectual mode of consuming smoke was stated to be—plenty of boiler room, careful firing, and good draught."

Smoke from Common Grates.—We are told of an invention by Mr. J. Jeffreys, of Leeds, said to be applicable to a common grate, without any alteration for the purpose of burning coke in house fires; by means of which smoke is to be done away with, and a saving of fuel effected. A sliding partition, like a moving "flower," is fitted in front of the fire-place, and has another plate of metal suspended to its lower edge at an angle of about 60 degrees, having about one-third of its surface in front of the partition, and two-thirds behind it. This inclined plate has an important action, and is termed an "inflector," as it turns the current of air with force upon the top and front of the fire, keeping them brilliant. By giving this inflector a polished surface, it becomes also a powerful reflector of the heat which, as an inflector, it excites. Sheet tin will answer well for common purposes; while, for the very poor, thin sheet-iron will give all the effect of the inflector, though not acting as a reflector. It is said the whole apparatus might be adapted to a poor man's grate for 4s. while the economy of fuel, after repeated trials, is found to amount to from a fourth to more than a third.

PROVINCIAL NEWS.

Chester.—The rebuilding of the Blue-coat Hospital, including schools and almshouses, under the direction of Messrs. Morris and Hebson, architects, is fast approaching completion. A statue of a scholar, in Caen stone, by Mr. Richardson, is on view in one of the new almshouses, prior to its being placed in a niche in front of the new school buildings. It is life-size, in the costume of the period (the school was founded by Bishop Stratford, A.D. 1700), and is also a portrait statue from one of the boys, who was sent to London to serve as a model for the work.

Grimsby.—Both the Manchester and East Lincolnshire Railway Companies are contemplating extensive alterations and improvements on their works at Grimsby. The Manchester Company are about to make extensive alterations in the fishing dock, to fence in the entire works, and to erect a dock-master's house and railway station on the dockworks. The companies seem to have come to a better understanding with each other: their respective goods departments are to be united at the Manchester warehouse, and the East Lincolnshire warehouse is to be converted into an engine-house, for the Great Northern Company.

Lynn.—The south chancel window in St. Nicholas's Chapel has just been filled with stained glass, as a memento of a late town-clerk of this borough. The subject illustrated is the parable of the talents as given in the 25th chapter of Matthew, and consists of a series of eight compartments; executed by Warrington.

Yarmouth.—The Wellington Pier has been completed, and visitors have now the advantage of an agreeable promenade. The dimensions of the pier are—length, 703 feet; width, 30 feet; with an oval end 100 feet in width. From the gates there is a rise of 8 feet in 450, the remainder being on the level. At the oval end there are landing-places and ladders for boats. The esplanade has been extended about 60 feet, passing the entrance to the pier a distance of 10 feet. This esplanade, the *Norfolk Chronicle* thinks, should be still further extended, ultimately as far as the monument, and a row of handsome houses erected facing the sea.——The waterworks at Ormesby are slowly progressing under the superintendence of Mr. Parsons. The reservoir is about $1\frac{1}{4}$ miles, and the filtering-beds about 6 miles from the town. The water, after passing from the Broad through the filter-beds, will be pumped into the reservoir, and from thence conveyed in the pipes to the town. The filter-beds and reservoir are not yet completed. The main pipes, of 9-inch diameter, are laid from the town to the reservoir. Three months since the Board of Health advertised for fire-plugs, and the tender of Mr. Ayres, on behalf of the company, was accepted. The same description of hydrants will be used as at Norwich. There will be about seventy hydrants in different parts of the town. In another year, the supply of good filtered water, under pressure, and obtainable at all times, must be a great benefit to the town.

Cliffe.—New national schools are in course of erection on a piece of land abutting the churchyard (given by E. W. Peel, Esq. of Maidstone, for the purpose), from plans by Mr. Cooper, architect, Gravesend, as approved by the Lords of the Privy Council. The walls are of Kentish rag-stone, and the roofs are to be deal, open timbered, and stained. The repairing the fine chancel of Cliffe church has just been completed, the ceiling removed, and the walls plastered with blue lias not jointed. It is much to be regretted, says our correspondent, that a new east window has not taken place of the present unsightly appendage. Mr. H. G. Austin, of

Canterbury, was the architect employed by the rector, Archdeacon Croft.

Salisbury.—It has been resolved to endeavour to have the chapter-house of the cathedral here restored, as a memorial to the late Bishop of Salisbury. The estimated cost, inclusive of stained glass for the windows, is 5,000*l.* A committee has been appointed with the dean and chapter at the head of it

Taverstock.—It is intended to take down and rebuild the parish church of Taverstock, near Salisbury, with a view to better accommodation.

Preston.—This is also proposed with respect to the parish church of Preston, near Weymouth, and applications have accordingly been made to the Salisbury Diocesan Church Building Association for grants in aid.

Wellington.—The Black Down Hills monument committee state that the original building has been thoroughly and substantially repaired, raised to a height of 170 feet, that it has stood the late boisterous weather undamaged, and that the base is the only portion not yet completed. They report that the contract (with Mr. Aust, on Messrs. Goodridge's plan) and incidental expenses amount to 1,140*l.* that the subscriptions received amount to 1,020*l.* leaving a sum of 120*l.* now wanting. This would be further increased if a fence wall were built to protect the base. The committee appeal to the county of Somerset to supply the deficiency, and to complete the memorial. It has been determined, as we before said, to enlist the services of the ladies of the county in raising the sum still required. Lady Hood and other ladies, according to the *Bath Chronicle*, have already expressed their readiness to subscribe 10*l.* each.

Taunton.—A house agent at Taunton informs us that, to a man of capital, and having a taste for building, there is a fine opportunity of realising a handsome return for his money in that immediate neighbourhood by erecting some convenient residences. There are building sites, he says, to be had with immediate possession on reasonable terms.

Pembroke.—The battery at the western extremity of the dockyard has been completed, the guns received having all been mounted. The fortification on Thorne Island is advancing rapidly, and will be completed without delay. Its guns command the entrance to the haven, and will cross their fire with the battery at Dale Point, on the northern shore, where considerable works are in course of progress. 20,000*l.* are required to complete these defences, which will be mounted with guns of the heaviest calibre on traversing carriages.

Holyhead.—Upwards of 1,500 men are now employed at the Holyhead new harbour works: a dozen locomotive engines are in use; and about 4,000 tons of solid rock are deposited daily. The Great North Breakwater, which is to be 5,000 feet in length, and running out to Platters buoy, is expected to be finished in August.

Liverpool.—Some buildings, situate in High-street, and extending to Exchange-street, Liverpool, were sold by auction a few days since for 20,000*l.* The site is required by an insurance office, and the land fetched at the rate of 50*l.* per square yard, the highest price, it is said, ever paid in Liverpool for land.

Tranmere.—A meeting was lately held in the new school, Limekiln-lane, to inspect Mr. Hay's plan for a new church, and receive the report of the building committee. The Rev. Mr. Arthure stated that, while there were only four places of worship, there were thirty houses licensed for the sale of intoxicating liquors.—Mr. Harden stated, that the lord of the manor had given upwards of an acre of the best building land in the neighbourhood for a site; and his brother, Mr. John Orred, the sum of 3,000*l.*—viz.: 2,000*l.* for the endowment, and 1,000*l.* to build the minister's house. The subscriptions amounted to 1,600*l.*; and, for 500*l.* more, they might erect a church without chancel or spire; but to complete the building in its integrity would require the sum of 3,300*l.* Resolutions were carried unanimously approving of the plans.

Preston.—The works at the new parish church are progressing favourably. The chancel is so far completed that it is expected to be ready for service in little more than a month. The windows at present are all filled with plain glass, but ultimately the chancel will contain a collection of stained glass windows, several gentlemen having intimated their intention of presenting them to the church. Sir H. Bold Hoghton, bart. will give a window for the large one at the east end, and others have been promised, two by Mr. E. C. Lowndes, one by Mr. John Addison, one by Mr. R Newsham, and one by Mr. J. Bairstow. The stained glass which formerly occupied the east window in the old chancel will now be placed in the side; and as the new chancel and chancel aisle will be lighted by seven windows, there are now six stained-glass windows already at the disposal of the building committee. The monuments, including that to the memory of the late vicar, are all now in their places in the chancel, the flooring of which is also laid. The works in the other portion of the building are also being carried on with considerable activity, and the workmen have commenced the alteration of the steeple, preparatory to the erection of the spire.

Coventry.—We are informed (says a local paper) that the restoration of the exterior of St. Michael's Church, in this city, is about to be proceeded with at once, from the designs of Mr. Scott, architect, of London. The committee, at their meeting on Tuesday evening last, decided to accept the tender of Messrs. Robinson and Son, of this city, for the first section, which comprises the wall of the south aisle of the chancel. The present dilapidated buttresses will be removed, and their places supplied by new ones, surmounted by crocketed pinnacles. The parapet and cornice will be restored to their original state. The old windows will be taken out, and new jambs, arches, sills, mullions, and tracery substituted. The door and doorway will be replaced by new ones, more in accordance with the style of the building, and the steps entirely reconstructed with the addition of a light, ornamental, iron railing. The wall will be rendered sound and perfect: in short, the whole of this portion of the church will be restored to its original perfection and beauty. The stone for the restoration is the gift of the Marquis of Hertford, and will be obtained from the newly-opened quarry in his park. The dilapidated state of the church has been a source of anxiety for some time, the ravages of time telling fast upon the old red sandstone, more picturesque than durable.

Halifax.—A subscription is being made for the purpose of erecting a large stained glass window in the east part of the parish church here, for which upwards of 1,100*l.* has already been collected.

St. Helier's.—It has been resolved by a committee, according to the *Jersey Times*, "That the monument proposed to be erected to the memory of the late Mr. Le Sueur, consist of an obelisk, of Jersey granite, to be erected in the upper part of Broad-street, if practicable; and that artists—both native and others—be invited to furnish plans and designs for the same, between this time and the 31st day of May, when the designs, with estimates, shall be submitted to this committee for approval, choice, or rejection. That the estimates for the intended work shall be positive and final—and in no case are to exceed the sum of 300*l.*" The committee expressed a wish that the intended obelisk should be so constructed as to admit of a fountain being eventually connected with it. The site recommended, in addition to its general eligibility, is said to be peculiarly desirable, from its contiguity to the spot where the late constable was born.——The same paper states, that the Drains' Committee have opened the tenders sent in for drain-works intended in Sand-street, Seale-street, Castle-street, Charing-cross, and Dumaresq-street. They were five in number, the lowest being that of Mr. Joseph Le Rossignol, who consequently obtained the contract.

Arbroath.—While the Market-place buildings, says the local *Review*, advance at a rapid rate, giving promise of completion in the course of a few months, other extensive improvements and alterations in different parts of the town also deserve notice. These seem to be chiefly manufacturing premises and warehouses on a large scale. It is supposed that 2,000 persons will find employment at all these works. A large space of ground adjoining, but still higher up the Den, has been feued by a manufacturer, who will soon commence building, and both spinning and weaving establishments on an extensive scale will shortly be erected there.

MUNICH—EXHIBITION OF THE ART-UNION.

Amongst the architectural drawings here is the plan for the new Maximilian-street, showing costly structures, which would almost require a Crœsus treasure for their execution. A *dome* with the sepulchres of the royal dynasty, the palace on the Isar-höhe, the Athenæum, and the college for the higher branches of the public service, would be ornaments, which, perhaps, comparatively little Bavaria cannot aspire to.

THE SERVICE OF THE AQUEDUCTS AND FOUNTAINS AT CONSTANTINOPLE.

The Turkish capital offers the peculiarity that good and salutary regulations *exist* where a mere chaos was hitherto supposed to occupy their place. According to late calculations, based on correct observations and tables, the fifteen systems of sources and water wells which surround Constantinople, and from which numerous aqueducts and cisterns are alimented, yield a daily supply of 249 *lulehs* of water, which is equivalent to 12,267,532 kilogr.; and as the population of the Turkish capital is calculated at 600,000, a daily supply of 2,044 kilogr. for every person indiscriminately is resulting therefrom. The administration and service of this water-supply is confided to an especial class or order of men, the corps of the *Su-Jaldshi* or well-masters. This regularly organised corps exercises a licensed art, and if they possess no theoretical knowledge, still they practise their art according to some traditional rules and principles. To this corps all the works relating to the searching after water, its conducting and distribution, as far as want and even comfort are concerned, are confided. The corporation of the Su-Jaldshi now consists of about 300 Turks and 100 Albanese Greeks, who are exclusively selected from some families of the district of Drinopolis, in the Epirus. The inhabitants of five or six villages emigrate for the sake of occupying the situations of well-masters in Constantinople and other Turkish cities. These industrious people seem to be of Greek origin, and claim the honour of having constructed the aqueduct and canal which formerly conducted the waters of St. George's to Nicopolis, although there is no historical evidence proving it. But it is quite certain that they have erected an aqueduct of 366 arches, which, at the time that Leukadia belonged to the Turks, led spring waters across an arm of the sea to the citadel of St. Marius. Under the Greek emperors, the Lundshids were in the exclusive possession of the rights of well-masters; and the privileges granted to them by the Ottomans were only the consequences of those former rights.

No other Albanese Greek can be preferred to the Lundshids in the appointment of well-master, which always descends from father to son. If the latter is not of age, the corporation assigns him a guardian until he is able to perform his task. If a well-master die without male issue, then in this sole instance the corporation has the right to sell the situation; and the price, which is almost always twenty to thirty *boursis* (10,000 to 15,000 francs), belongs to the widow or her female children. At the head of these Lundshids is the *Su-Nasari* (inspector of water), who is nominated by the Sultan, and mostly one of the subaltern courtiers of the emperor. His salary is 3,000 piastres, besides the revenues and the manorship of the twelve villages, where the principal water-cranks are situated, as Belgrade, Pyrgas, Ponte Piccolo, Litnar, and other places.

The Regent's Park.—Mr. Editor,—I wish you would point out the lamentable, the disgraceful state of the drainage system and surface of the Regent's-park; also the extravagant and bad manner in which the New-road is repaired with broken granite.—B.

THE PIPE-DRAIN CONTROVERSY.

THE observations in your last number on the discussion of the drainage question at the Architects' Institute, were quite unnecessary to convince the most cursory reader of your journal that the course you have taken has been one of strict impartiality, and likely to conduce to its satisfactory settlement.

My object in now writing is to protest against the very unfair course pursued by the Metropolitan Commissioners of Sewers in permitting those only of their officers who adopt the views of Mr. Bazalgette to publish their statements, and that contrary to existing regulations, which forbid their surveyors to make known any facts or opinions gathered in the discharge of their duties, and for the violation of which orders one of the surveyors was some time back dismissed. In common fairness, either the restrictions imposed should be withdrawn, or applied without distinction.

Mr. Bazalgette commenced his duties as engineer to the commissioners with foregone conclusions, on many of the points under discussion, and his opinion is surely entitled to no more consideration than that of men of such extensive experience and practical knowledge as Mr. John Roe, or than that of many of the present surveyors of the metropolitan commissioners, whose opinions and practice, as far as they are allowed to carry the latter out, differ materially from his.

While the question is being agitated in the metropolis, the surveyors of our large provincial towns are judiciously adopting the pipe system to a large extent, to the advantage of the inhabitants, both on the score of efficiency and economy; and were it not that contending parties are striving to gain the ascendancy in the metropolis, the question would soon be settled by all practical men. It must not be forgotten in this discussion, that on its decision hangs the alternative of drainage or no drainage for many towns not blessed with large resources, and that if the system lately sanctioned by the commissioners had been recognised as the proper one, such places as Tottenham, Rugby, and many others, would have been without sewerage to this day.

FAIR PLAY.

THE ARTISTS' GENERAL BENEVOLENT INSTITUTION.

THE dinner, last week, was well attended, and produced a good sum. Mr. Disraeli, who was in the chair, dilated on the peculiarity of the artist-mind, and the time required to produce what is of so much consequence, a sympathising, art-loving public. The council of the Art-Union of London might adopt his speech as a testimonial to the value of their association, if they needed it, but they do not. There was a goodly show of academicians and others,—Lord Dufferin, Sir C. L. Eastlake, Sir W. Ross, Messrs. Roberts, Hardwick, Cockerell, Scott Russell, Uwins, Lewis Pocock, Denham, Robert Bell, Ardin, Durham, Millais, Elmore, Creswick, and others. It was rather a slow affair, after all. Is there no one in London with a genius for public dining who could give committees a few hints as to management, or are they too obstinate to learn?

COMBUSTIBLE PARAPETS AND ENCLOSURES UNDER METROPOLITAN BUILDINGS ACT.

As the irregularity to which the following award relates appears to be becoming general, the publication of the decision may be of use. In the case of six houses in King Henry's-walk, Ball's Pond-road, district of South Islington, built by Mr. John Glenn, the shops of five of them extend about 6 feet 6 inches beyond the wall of the upper part of the building and are covered with a flat, and the shop of the sixth (the corner house) extends beyond the flank wall also. The builder had constructed the upper part of the front enclosure of the shops, between the party walls, of timber, lathed and cemented, which formed the entablature, &c. and stood as a parapet several feet above the flat in each case. At the corner house this parapet continued round part of the flank also. The district-surveyor, not considering himself competent to permit this, gave notice of irregularity on the grounds that the external walls or enclosures were not of sound bricks or of stone as required by schedule D, part 2, and that the parapets were not of incombustible materials as required by schedule E. Ultimately the matter was taken to the referees, and they awarded that the enclosures (including parapets and cornices) were contrary to the directions and provisions of the Buildings Act, and they directed Mr. Glenn forthwith to amend the irregularities.

Fees of the office, 2*l.* 12s. 3d. and 1*l.* 1s. to surveyor, to be paid by the builder.

MASTERS AND MEN.

Willin v. *Clark*.—This was an action brought in the Westminster County Court, to recover the sum of 6s. due to the plaintiff from Mr. Clark, the engineer, of the Strand. The facts of the case, as stated by the plaintiff, were, that he was employed by the defendant as an engineer, and that about a month since he left the defendant's employ on the Saturday evening; that in the time-table made up by him there was an omission of two hours (1s.), and that it was the defendant's custom to retain in hand one day's wages (6s.), making together 6s. the amount of the present claim. The defendant stated that Willin had left him without notice, and that it was his custom to give *his men a week's notice and to require it*, and consequently that the amount of this claim was forfeited; but, on cross-examination, he admitted that the custom pursued by him was not universally practised.

His Honour (Bayley) said he regretted very much that some fixed rule did not prevail as to giving and receiving notice, but as the custom of the defendant (a very fair one) was not in universal practice, it was not binding upon the plaintiff, and he must, therefore, make an order for payment of the amount claimed.

Notices of Books.

The Three Days of Wensleydale; the Valley of the Yore. By W. G. M. JONES BARKER. London: Dolman. Paternoster-row. 1854.

THIS is a pleasantly-written account of that celebrated district in Yorkshire (Richmond), in which once were resident kings and king-makers, princes and bishops, and which still contains many interesting architectural records of its early condition,—"history in ruins." The three Days alluded to are the Roman Catholic Day, the Day of change, and the present Day. The author, a Romanist apparently, dwells with enthusiasm on the "glories" of the first of the three. In the introduction it is remarked that, pending a more elaborate history which the author contemplates, "a little book was evidently required which should furnish a concise account of all the most interesting objects, and to a certain extent a review of former times, at a price adapted to the poor as well as to the rich man's purse; a book which might equally find its way to the esquire's drawing-room-table and to the humble book-shelf of the hardy peasant dalesman who desires to know something of his 'forelders' nomes and deeds." The deficiency thus felt he hopes his three chapters will to a great extent supply.

The Mariners' Daily Assistant; with Rules for Finding the Latitude, &c. and an Appendix, containing an extensive Set of requisite Tables. By WILLIAM TURNBULL. Imray and Son, Nautical Book and Chart Publishers, 102, Minories. 1854.

THIS appears to be a very complete work of the kind; made up, if the aspect of the whole do not deceive us, from two separate works, one being in form of an elaborate and extensive appendix of tables. Our readers are well acquainted with the merits of "W. T.'s" mathematical labours, which, therefore, need no special recommendation here.

The author, a self-taught country labourer, is also the writer of many other volumes on scientific subjects, many of which we have seen ourselves: some of them are published in other names; but our author claims the merit of their preparation.

We must here remark, however, though not meaning it to apply to Mr. Turnbull's case, that if an author, for a consideration, dispose of his name, or rather of his labours as a man of science, to another, without express understanding that if or when published the real author's name must be given, he really has no business afterwards to complain of the omission.

VARIORUM.

For "Murray's Railway Reading," a second series of "Essays from the *Times*," has been published, including the papers on Layard, Lord Mansfield, Gordon Cumming, John Sterling, Chantrey, the Greeks, Dickens, and Thackeray, and a very charming volume it makes. Another of the volumes is devoted to a second series of "Deeds of Naval Daring," by Edward Giffard, which falls in with and keeps up the present popular feeling in favour of our gallant navy.

Miscellanea.

METROPOLITAN SEWERS COMMISSION.—A general Court of Commissioners was held last week at Greek-street; when the secretary reported that the available balance in the hands of the treasurer amounted to 34,958*l.* 8s. 9d. and the deposit account was 40,000*l.* The Court then proceeded to order some district rates of 6d. in the pound to be made, when Colonel Dawson and other Commissioners expressed some impatience at their present position, voting away money and performing duties after notice of resignation. They wished to know what progress the Government were making with the re-constitution of the Commission. The chairman said that the Government intended as soon as they could this session, to bring in a Bill for the reconstitution of the Commission, and the amendment of the law relating to it. That Bill was now under the consideration of the Government. He could say there was no wish on the part of the Government to get rid of the present commissioners, or to control them in the exercise of the power the law had given to them, although some change was contemplated. So long as the commissioners continued to exercise the power given to them under the Act of Parliament they must do so according to their conscientious convictions, and in no other way. He was sorry to differ from his colleagues. He could not altogether acquiesce in the view they had taken of the meaning of the Government communication sent from the Home-office. He could not look upon the letter sent from the Home-office as implying a want of confidence in the Commissioners. The interpretation he put upon it was, although he was not authorised in putting this construction upon it, that Lord Palmerston wished, by this letter, to elicit from the Commissioners an expression of opinion as to the best course of drainage, as proposed by the Board of Health.

STOURBRIDGE SCHOOL OF DESIGN.—The annual meeting of this institution was held on Monday week. There was a good attendance. Mr. J. H. H. Foley, M.P. was called to the chair, and introduced the business of the meeting in an appropriate speech, after which he distributed the prizes to the successful candidates. This institution, which has now been in existence for three years, is about to suffer some change. The Government, which has hitherto given a liberal support to it, will now withdraw its grant toward the salary of the master, considering that it ought now to maintain itself. The Board of Trade has appointed Mr. McCallum, the master (to whom the students have presented a memorial), to make a tour in Italy, and a new master is therefore engaged. The students are being sought after to fill good situations where a thorough knowledge of practical art is required. During the past year there have been 120 male and 30 female students. The financial statement showed that during the past year the receipts had been 240*l.* 16s. 10d. and the disbursements, 220*l.* 8s. 7¼d. leaving a small balance in hand; but against this there were liabilities amounting to 80*l.* 12s. 6d. Still the Institution was in a better position than at the close of the previous year.

THAMES TUNNEL.—At the commemoration of the opening of the Tunnel the other day, 16,539 passengers passed through it, and the sum received was 68*l.* 18s. 3d.

THE SEWER ACCIDENT AT CHELSEA.—Having read in the *Builder* paragraphs relating to the sewer accident at Paradise-walk, Chelsea, in February, I trust you will inform your readers that at a meeting of the persons who took an interest in the welfare of the poor widows of the unfortunate men that were killed, it was unanimously agreed, after having a list of contributions handed to the chairman by Mr. Eldred, the treasurer, amounting to 90*l.* 7s. 8d. to place half that amount in the Chelsea Savings-Bank in the names of each widow, and of a trustee named by them, and approved by the treasurer. So that when an opportunity offered either of them to lay it out for her own benefit, they might do so.—JOHN CULLON.

THE DECIMAL SYSTEM IN COINAGE, WEIGHTS, AND MEASURES.—On 14th and 28th ult. a discussion took place at the Institution of Civil Engineers, on Mr. Yates's paper on this subject, when the diversity of opinion seemed to accord pretty well with the multiplicity of particular schemes by which the decimal system seems to stand a chance of being swamped. The report gives no clue to individual opinions and suggestions. It is to be hoped that some order will come out of the chaos presently, but for our own part, although we could readily add to the confusion by suggestions, and some of them very good ones, too, in some respects, from our own correspondents, we think it desirable to be very wary how we lend our aid to swamp a very useful and excellent general principle.

HOUSES FOR WORKMEN IN FRANCE.—The *Moniteur*, according to the *Times*, contains a long report from the Minister of the Interior to the Emperor on the employment of part of the credit of 10,000,000f. allowed for the improvement of the lodgings of workmen in large manufacturing towns, by the decrees of the 22nd of January and the 27th of March, 1852. It states that a subvention of 200,000 f. has been granted to the "Cité Napoléon," in Paris, the first workmen's lodging-house that was built; that Messrs. Péreire have contracted to build workmen's lodging-houses to the amount of 4,550,000 f. on condition of receiving a subvention from the Government equal to one-third of the expense, and that they have already constructed two large buildings, one at La Chapelle, and the other at the Batignolles, in which they are bound to let single bed-rooms for unmarried men at 20 c. a night, and apartments for married couples at 7 f. 50 c. per superficial yard per annum; that M. de Heckeren, senator, and M. Kennard have also contracted to build lodging-houses to the amount of 4,140,000 f. on receiving a subvention equal to one-third of the expense, and that they are raising a vast edifice in the Rue de Montreuil; and that Messrs. Puteaux, who have obtained a recompense for the first plans, have already built four houses on the Boulevard Mazas, and are constructing six others at the Batignolles and at Grenelle. The accommodation already provided in Paris consists, it says, of 5,300 lodgings for unmarried and 800 for married workmen.

THE LABOUR QUESTION.—About 150 of the joiners of Hull are still on strike, and the dispute between them and their employers presents no appearance of coming to a termination. Several of the smaller masters, who employ about fifty hands, have complied with the advance demanded—6d. per day, and about twenty other men have left the town, but the great body of workmen are still on strike.——A short time ago the operative masons of Liverpool addressed a note to their employers, respectfully asking an advance of wages. The employers responded by soliciting an interview with the operatives as early as possible, to converse together and make such overtures as might avert the baneful effects of a strike or turn out. The result was an amicable arrangement of the amount of wages.

ENHANCED VALUE OF ENGLISH TIMBER.—At a wood sale in the plantations of Mr. R. B. Barrow, of Sydnope, recently, says a Derbyshire paper, the number of purchasers was greater than at any similar sale for years past, and Mr. Poyser, the auctioneer, knocked down 126 lots, chiefly larch and Scotch poles, to eager buyers in about three hours, at prices which in the aggregate realised fully forty per cent. above the sum at which the timber had been valued by competent judges. A correspondent states that 5d. per foot has been refused for Scotch poles, containing 2 feet or over, while a few years ago, the same descriptions of wood might have been obtained at from one penny to three halfpence. The advanced price of foreign timber, no doubt, throws more English into use, rendering it more in request.

BRONZES IN PARIS.—In Paris, according to *The Leader*, they are taking bronze casts of the Venus of Milo, for the principal public gardens, and a few museums in the departments. Shall we incur the charge of Vandalism, says the paper we quote, if we express a wish that Louis Napoleon had ordered this beautiful torso to be promoted, in the copies, to a complete form? At all events, the Vandals who only desire to *restore* the missing limbs of statuary should be lightly censured. Other bronzes are in process of casting, and, when complete, will occupy conspicuous positions. The statues of Francis I. Louis XIV. and *the* Emperor—all to be executed in Florentine bronze—will adorn the court of the Louvre and the Carrousel. A colossal statue of Louis XVI. by Raggi, is warehoused somewhere near the Champs de Mars, waiting orders for a final destination. This statue is of vast dimensions, being fully 20 feet high. It represents the king in his state robes, *fleur-de-lys* bespangled. His majesty holds in one hand a plumed hat, the charter in the other, and appears to weigh both very attentively.

THE ART-UNION OF LONDON.—The distribution will take place at the Lyceum Theatre, on Tuesday morning, the 25th inst. Lord Monteagle in the chair.

GALVANO-PLASTIC NIELLO.—Niello, a peculiar style of enamelling, consists in engraving or stamping figures on a plate of silver or gold, and then filling the incised lines, or impressed pattern, with a sort of enamel, differing, however, from true enamel, which is a kind of glass, by being formed of a mixture of the sulphurets of lead, silver, and copper. This mixture is of a black colour—hence the name niello from nigellum, derived from niger, black—and when melted into the intaglio parts of a plate, gives it somewhat the appearance of an inked engraved copper plate. A new kind of niello work has lately been introduced on the Continent, in which, however, the figures are not produced by an enamel of sulphuret of silver, as in the true niello, but by a different coloured metal: thus on a plate of gold may be produced fine engravings, the lines of which are in silver, and so on. * * * Many highly ornamental and useful applications might be made of these processes, especially in the manufacture of church furniture. Instead of simply engraving the name and legend upon pieces of plate presented to persons, it might be put in letters of gold at very little more expense.—*Mining Journal.*

NORTH OXFORDSHIRE ARCHÆOLOGICAL SOCIETY.—The quarterly meeting of this institution was held in the Mechanics' Institute, Banbury, on Tuesday in last week, and was attended by a large number of ladies and gentlemen. Four papers were read, and the table was spread with a great many articles illustrative of the subjects brought before the society. On the motion of the Rev. W. S. Miller, the Rev. E. Payne took the chair. The Chairman expressed his pleasure at seeing so many ladies in this meeting, and hoped they would be induced to become members of the society. The programme, he believed, was this—he should first have to call upon an individual to whom he need not further allude at present [the chairman himself] to read a paper on a subject connected with the execution of Charles I. and a letter illustrating that wretched scene. The second paper was to have been read by their president, Lord Alwyne Compton, who had sent his paper to Mr. Miller to be read; but his lordship could not be here himself. That paper was "On the civil Wars and the Siege of Banbury." The third, by Mr. Rye, was to be "On Madmarston Camp." The fourth and last, by Mr. E. G. Bruton, "On the Value and Importance of Archæology, and its Influence on Decorative and Ornamental Art." There were several articles on the table connected with these subjects. The several papers were then read: they are reported in the *Banbury Guardian*.

THE BATH SCHOOL OF ART.—The executive committee for promoting the establishment of a school of design in Bath, says the local *Chronicle*, feel themselves sufficiently assured of success in their praiseworthy undertaking to apply at once for the series of examples and models recommended by Mr. Cole in his recent address. A certificated master has been appointed, and is, we believe, already arrived, to superintend the preparation of the central school-room, when the various classes will be at once received. There is every promise of a very sufficient supply of pupils. The West of England has always contributed its full share, and rather more, of men eminent for high artistic feeling. Reynolds, Lawrence, Baily, Pyne, Rippingille, Barker, Muller, and Willes Maddox were, and, possibly of some we may say, still are among the brightest ornaments of the English school of art. Mr. Cole remarked in his address, that the practice of careful drawing was almost invariably attended with a habit of truthful speaking; and if this be so, how could we by possibility adduce a better or stronger motive in favour of making such a study a part of general education? But we feel that it leads, under proper guidance, to an intensity and purity of reflection which may do much in exalting the mind of the most rude and uncivilized; and we feel that by directing a boy's thoughts to the beautiful proportions of the human figure, the exquisite expression of the human countenance, the wonderful adaptation to all the purposes of animal existence in the frame of the brute creation, the infinite and graceful variety of forms and combinations in foliage—in short, to the grace and symmetry of all God's works, we may raise his feelings from the degraded level in which we too frequently find them, and he will then abhor the language and the mischief he now delights in. In order to place the Bath project on a sure foundation, it is necessary to raise a sum of about 150*l.* to purchase materials, casts, &c. a very insignificant sum for so important a purpose in such a city as Bath, and one which we should expect will be freely placed at the disposal of the committee in a few days. Subscriptions are being received at all the Bath Libraries and at the Somersetshire Bank.

LECTURE ON OUR IRON MANUFACTURE.—At Walsall, on Monday before last, Mr. S. H. Blackwell, of Dudley, delivered a lecture on this subject to the members of the Walsall Library and Philosophical Institution. In noticing the increased quantity of iron produced in this country—the quantity (1,800,000 tons) exported last year, being three times the entire "make" of the kingdom twenty-eight years ago—he said, that proportionate with the increase of requirements was the increase of resources. The Great Exhibition had led to the discovery of ores not before known to exist in North Yorkshire, Northamptonshire, West Somerset, and Devonshire. The yield in Northamptonshire was very great, and he was himself procuring there from 15,000 to 20,000 tons per week. To produce the three million tons of iron which would be manufactured in England this year, there would be required eight million tons of ore, from twelve to fourteen million tons of coal, two million of lime, and of the other material, air, between thirty and forty million tons. There was every reason to believe that the demand would increase in the succeeding as rapidly as it had increased in the past twenty-five years. In every one of the places in England in which new iron-making resources were discovered, there were invariably found traces of the workings of the "old men," for it could not be ascertained at what date these workings were made.

SUNDAY SCHOOLS AT HAVERSTOCK-HILL are to be built, Mr. Edward Gotto, architect. Tenders varying from 747*l.* to 509*l.* have been received; and the latter, from Humphreys and Son, accepted.

INDEPENDENT CHAPEL, HASLINGDEN: COMPETITION.—The committee had forty-nine designs submitted to them, and, after examination, those found afterwards to be by Messrs. Cooper and Peak, of London, were selected. The 10*l.* premium offered for the second best set of drawings was awarded to Messrs. T. Mallinson and Son, of Nottingham.

DRAINAGE TENDERS.—The following tenders have been sent in to the Local Board of Health for Dover Drainage and Waterworks. We do not pretend to understand the principles which guide estimators:—

P. Ayers, Dover	£31,088
G. Fry, Dover	27,539
King and Tester, Ashford	25,183
Diggle, Dover	24,964
Oldham, Dover	24,817
Dean and Co. Walmer	24,171
Buxton, Leeds	24,033
Nightingail and Bushel, Dover	22,544
Stiff, Dover	21,749
Smith, Woolwich	21,255
Moxon and Co. Brompton (accepted)	21,071
Varley, Birmingham	15,852

TENDERS

For the erection of a warehouse in Cannon-street, for Messrs. Berens, Blomberg, and Co. Mr. Hosking, Architect.

Kelk	£19,789	0	0
Locke and Nesham	19,622	0	0
Lucas, Brothers	18,750	0	0
W. Cubitt and Co.	18,390	0	0
Holland	18,390	0	0

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,

LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects—Portraits drawn from Life on Stone, or from Paintings, Drawings, or Daguerreotypes—Medical and Scientific Subjects, executed in a superior style peculiar to this establishment. Cartoons copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.

FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to Solicitors, Engineers and Surveyors, Stationers and Printers, throughout the country, great advantages for the rapid and economic execution of their Lithography If required, a plan received by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon

LITHOGRAPHY FOR COMMERCIAL PURPOSES,

Messrs. DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithography and Colour Printing, Messrs. DAY and SON promise a style of work of unequalled excellence, with economy and rapidity of execution. The smallest consumers of the productions of Lithography in any part of the kingdom should apply to Messrs DAY and SON for estimates, and it will be found, owing to the extent of this Establishment, that its manifest advantages, viz. superiority of work, great speed, and moderate charges, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs. DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The first and only perfect rendering of a painting in colours. "The Blue Lights" (after Turner), executed at this establishment, secured for itself the designation of a Painting Print. Other examp es of great merit, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL-WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."

These works, although elaborately printed in colours and gold, have been sold at the price of uncoloured works. The last-named, consisting of two plates, issued in Fortnigh ly Parts of four plates, proves the possibility of adapting Chromo-lithography to Periodical Works—to Book Plates requiring long numbers cheaply and quickly—and to Geological or other Coloured Maps.

Messrs. DAY and SON are prepared to contract and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawin , will find the reproduction by themselves of their own Sketches, by means of Lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,
LITHOGRAPHERS TO THE QUEEN,
17, Gate-street, Lincoln's-inn Fields, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate. May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 86, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

MOORE'S PATENT MOVABLE GLASS VENTILATOR, for Windows, Partitions, Factories, Workshops, Warehouses, Greenhouses, Cottages, Stabling, Granaries, and other Buildings, Railway and Private Carriages, &c. For Farms, Dairies, Outbuildings, &c the Ventilator can be made to form a complete window, iron frames and rough plate glass, &c. Ventilators made to any size, and to most forms of sashes; also for sky or fan lights, and other purposes. A considerable saving and additional safety by having fixed window sashes.

MOORE'S PATENT "LEVER VENTILATOR," forming a regular current of air, is calculated to effect all that is required for improving animal and vegetable health. The vitiated air is emitted at the opening left for that purpose. To shopkeepers they are particularly recommended, as from their capabilities of removing the foul air caused by the gas in the shop and windows, they effectually preserve the stock in good condition, and prevent explosion of gas.

Church and House Clock-maker to the Hon. Board of Ordnance, the Russian Government and the Emperor of China.

Manufactory, Sekford-works, St. James's-walk, Clerkenwell, London.

GOOD 3rds 16 oz. FOREIGN GLASS, in cases of 200 feet each, average size, 40 by 30 at 42s. per case; 4th ditto, 34s. Also 16 oz. ground do. do. 4d. per foot; Crown and 16 oz. Sheet squares, in 100 feet boxes, virgins from 14 by 10 upwards 2d. per foot; 1inch rough Plate Tiles, 12s. per dozen. Also, Crown and Sheet Glass in crates, British and Patent Plate, Fluted and Stained Glass, Glass Slates, &c. Sheet Lead, Pipe, White Lead, Oils, Turpentine, Colours, &c.—O. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and list of prices to be made at their warehouse, 313, OXFORD-STREET.

EMBOSSED GLASS, &c.—D. NEWTON, Ornamental Designer, Glider, Writer and Embosser on Glass, Brewings and estimates furnished. Country orders executed with despatch, on the lowest terms, at 36, Tavistock-street, Covent-garden.

C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Munster street, Regent's-park. 20s. per cwt. given for old Lead. C. L. begs to call the attention of Painters, &c. to his stock of plumbers' closet-pans, plug ditto, brass-work, &c. also Lead, and patent pipe-plate, patent plate, sheet and crown glass, white-lead, oils, colours, &c. Glass illuminators for floors or pavements, vaults, &c. in iron frames or not.

TO GASFITTERS, BUILDERS, &c.

WANTED, a large Glass CHANDELIER for a public concert-room, to burn gas. Particulars and where it can be seen to be enclosed to Mr M. J. STUTELY'S Office, 4, Doughty-street, Mecklenburgh square.

HENRY PASK (late Johnson and Pask), BAKER-STREET, Clerkenwell, Sash, Shop Front, and Door Maker to the Trade, begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

REVOLVING SAFETY WOOD and IRON SHUTTERS—SNOXALL, Patentee, 96, Regent-street, and at his steam-works, 135, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner: Venetian blinds, per square foot, 7d.; best holland blinds, on rollers, 8d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 3s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

WINDOW-BLINDS FOR THE TRADE ONLY.—The only Blind-maker in London working exclusively for the Trade is WILLIAMS, 1, Rutland-street, Brompton. Manufacturer of every description of inside and outside BLINDS, conservatory blinds, outside shop blinds, horizontal blinds and awning blinds, executed on the most approved principles lower than any other house. The trade supplied with springs. A list of prices forwarded post free, on application to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

The Directors having resolved to allow interest after the rate of 5l. per cent. per annum upon all deposits of money, paid-up shares, and subscriptions six months in advance, savings bank depositors, and others desirous of investing small sums at interest, without partnership or joint-stock liability, are invited to peruse the prospectuses and rules, which may be had (gratis) on application.

A Post-office order for 10s. (being one month's subscription, entrance fee, and price of pass-book) will ensure immediate enrolment.

A year's subscription 5l. 6s. A paid-up share (bearing interest at the rate of 5l. per cent. per annum), which is immediately entered on the order of right to choose land independent of the ballot, 50l. 2s.

One-fifth of an acre of freehold building land for 50l. The freehold estate at Staines, Middlesex, fronting the high turnpike-road from London, and in proximity to the Ashford and Staines Railway Stations, on the South Western Railway, purchased for the members of the National Provident Freehold Land Society, is now ready for division with frontages of 40 feet by a depth of 240 feet. Allotments with frontages of 20 feet for 25l. each. Plans of the estate may be inspected at the Offices of the Society.

JOHN P. COX, Secretary.

WESTMINSTER FREEHOLD LAND SOCIETY.

President, Sir JOHN VILLIERS SHELLEY, Bart. M.P.

A PUBLIC MEETING will be held at ST. MARTIN'S HALL, Long-acre, on TUESDAY Evening APRIL 13, 1852, for the purpose of Balloting for Choice of Allotments in the Kilburn-park Estate.

F. E. BARNES, Esq. in the Chair. The chair will be taken at SEVEN o'clock, exact time.

Shares, 50l. each. Entrance, 1s. per share. Subscriptions, 2s. per fortnight; 5 per cent. interest allowed on payments in advance. Estates allotted to members in rotation, at cost price. Expenses of management defrayed by a separate fund. Statement of the cost of every estate published and supplied to the members. Offices, 4, Beaufort-buildings, Strand.

GEORGE HUGGETT, Secretary.

TO ENGINEERS, BOILER MAKERS, AND OTHERS.

PARTNERSHIP.—The Proprietor of a first-rate improving business in an inland county is ready to admit a partner possessed of some capital, 4,000l. whereof only is required to be brought in immediately. A knowledge of accounts is requisite, it being wished that the incoming partner should attend to that department.—Applications to be addressed by letter (free) to W. L. to the care of Mr. A. Boyle, 10, Gray's-inn-place, London.

LIGHTNING CONDUCTORS. R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductors are being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
139, Strand, London.
67, Hyde-park-street, Glasgow
27, Dale-street, Manchester.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—

Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its suitableness for INTERNAL as well as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick or other Rough surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.

MANUFACTURERS,

PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. THE PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practiced, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON —PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be used in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of, to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very useful paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

THE VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry by Messrs. P. B MORLEY and CO.; and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. wholesale agents, 82, King William-street, E.C.; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court, New-road, and 8, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and SON, 20 and 40, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and CO. Timber Merchants. The OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 19, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T and S KNIGHT, of Great Suffolk street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c. This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands unrivalled, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 15s and 28s. each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school rooms railway stations, &c as a substitute for oil paint, is without smell, dries in an hour, and may be applied to wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 18s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 8s. Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 8s. per gallon.

PATENTFLEXIBLE RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 6s. per stone.

DAMP WALLS.—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in all colours. Price 10s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent.)

CROWLEY, WHITE, and CROWLEY. Sole Manufacturers. The new supply this unanimous substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement, does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf Westminster Londeon; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian and other cements, and all other Cements in use for building purposes, Nine Elms, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great set motion in which this kind of lime is held for bull lines in wet and damp situations, such as wharf-walls, docks, &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

BLUE LIAS LIME.—QUARRY TO BE LET. Land to be let for the purpose of raising Blue Lias Lime of superior quality. The natural hydraulic properties of this kind of lime, and the great estimation in which it is held for the construction of buildings in wet or damp situations, are sufficient recommendations for its adoption in all such works as wharf walls, docks, &c. and also for concrete foundations. It is also peculiarly adapted for stucco. The Blue Lias Limestone is on the Bishop's Itchington Estate, near Southam, Warwickshire The Oxford and Birmingham Railway passes through the Estate, and the Blue Lias Limestone is close to the railway. Apply by letter to T. A. J. care of Mr. Ridgway, 169, Piccadilly, London.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

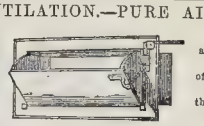
Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS' STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.



ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers. JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.

EXTERNAL WALL

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are the certain and the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders &c.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 2,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, February 14, 1851:

"An important feature in the contract for the maintenance of the Permanent Way, is that the contractors are bound to reduce their charges 2d. per mile per annum, whenever the Fish Joint, or certain other improvements, are hereafter introduced."

Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager; or Mr. WILLIAM HOWDEN, the Secretary, 36, Great George-street, Westminster.

LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELL invites the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excavators', bricklayers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.

Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead road.

ASPHALTE PAVEMENT.—HENRY WRIGHT is prepared to lay down his Asphalte Pavement, which is particularly adapted for railway platforms, footpaths, garden-paths, court-yards, and school-yards 2½ in. to 3 in. thick, from 1s. 6d to 2s. per square yard.—Address, 32, Bucklersbury, City.

TO ARCHITECTS, BUILDERS, AND CONTRACTORS.

THOMAS PRENTICE and CO. being desirous of more extensive orders to lay down the IMPROVED ASPHALTE FLOORS, will make a satisfactory discount to any one securing orders for quantity.—Address, Stowmarket.

No. 1. Floors laid	½ inch thick,	1s. per yard.
No. 2. Ditto	1 inch thick,	1s. 6d. "
No. 3. Ditto	1½ inch thick,	1s. 10d. "
No. 4. Ditto	2 inch thick,	2s. 6d. "

Employers to find sand, fuel, carriage, &c.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

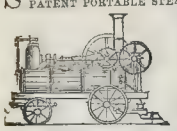
PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's-canal-basin, Commercial-road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water-pipes; Hooping, Castings, Furnace-pans, Baths, Buckets, &c wholesale, retail, and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete.—J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbite Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED
WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.
The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.
This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.
A large stock of Wrought Pumps, from 3 inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at
BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS
Pumps of Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

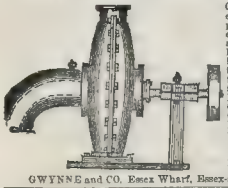


N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

STEAM PUMPING ENGINES.—
PATENT PORTABLE STEAM-ENGINES, from four to ten horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.
Contracts taken for pumping any quantity of water.



JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids, hot or cold, to raise, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to
GWYNNE and CO. Essex Wharf, Essex-street, Strand.

STEAM-ENGINES, of various sizes, from two-horse power upwards, always in stock, made on the most improved principles, and of the very best quality; single and double-purchase crabs also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery, made to order by ANDREW McLAREN and CO. Windsor Iron Works, Windsor-terrace, City-road, and 174, Upper Thames-street.

JAMES MICHIE, Engineer, Battersea-park, Nine Elms. Manufacturer of all kinds of STEAM ENGINES (portable and stationary), Pumps, Sawing Machines, Cranes, Crabs, &c.
N.B. An 8-horse high-pressure engine for sale

TO CONTRACTORS.
PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs MEDWIN and HALLS, Engineers and Portable Engine Makers, 32, Blackfriars-road. These engines have been successfully employed for years.

STEAM BOILERS of every description, Wrought Iron Girder Bridges, Gas Holders, and General Castings, Chains, Cables, and Contractors' Iron Work, manufactured by MELROSE and HUSSEY, Phœnix Works, Tavistock, near Dudley. Land Steam Engines, Horizontal Gearing.

ENGINES and BOILER for SALE, to be seen at the Atlas Works Company, Engineers, Emerson-street, Bankside, Southwark; an eight and ten horse beam engine; also a second hand six horse engine and boiler, saw-frames, circular saw benches, and wood planing machines, on the most approved principles. The six-horse engine and boiler to be seen at work on the premises.—For particulars, price, &c. address as above.

FOR SALE, in consequence of the owner making alterations and requiring more power, a capital 16-horse high-pressure STEAM-ENGINE, and Two Boilers. May be seen in full work at Mr. W. S. WOOD'S Sawing and Planing Mills, Wandsworth, Surrey.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Maple-field-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor, and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known as long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS.
MAW and CO. send free, per post, their NEW BOOK OF DESIGNS,
with prices, adapting this most durable, economical, and decorative production of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient building.
BENTHALL WORKS, near Broseley, Shropshire.
Specimens at 11, Aldersgate-street.

GREAT EXHIBITION 1851, Class 27, No. 111.—JAMES LUFF, Manufacturer of all kinds of Ornamental Bricks and Tiles, Red and White of the best quality, suitable for chimney-shafts, ridge crests, cornices, and mouldings of every description, TUDDENHAM, IPSWICH.
N.B. Builders furnishing detail drawings can have all sorts of ornamental designs executed; a small additional charge made for the moulds.

BRICKS! BRICKS! BRICKS!—PARK ESTATE BRICKFIELDS, near the Royal Arsenal, Woolwich.—Price for the present Month, and until further notice:—Stocks, 30s.; Place, 20s. per thousand. Ready money on the field.
February 20, 1854. L. DAVIS, Proprietor

BRICKS from COWLEY and KENT.
Also WHITE, YELLOW, and RED FACING BRICKS.
BLUE VITRIFIED BRICKS;
Fire Bricks, Lumps, and Tiles.
CHARLES RICHARDSON, 8, SOUTH WHARF, PADDINGTON.

300,000 BRICKS FOR SALE, delivered in trucks at Wimbledon Station, at 28s.—Apply to Mr. DIGGLE, Dover; or to Foreman, in field. A few Acres of Freehold Land may also be had, near the station.
The Brick-yard to Let on Lease, with Plant, &c.

WHITE, SUFFOLK, and RED FACING BRICKS; Kent, Grey Stocks, Malm Fronts, Shippers, &c. Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
YELLOW and PALE MALM SECONDS, CUTTERS, PAVIORS, SHIPPERS, &c. &c.
KENTISH RAG-STONE at a considerable reduction in price.
Apply to Mr. BENJ. GOUGH, 37, Newington-crescent, Newington Butts.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Pariors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stocks, and to judge for themselves.
Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

HOUSE ASHES and BREEZE and GAS ASHES FOR SALE, in any quantity.—Apply to J. A. SMITH, Great Northern Wharf, Fore-street, Lambeth. ONE MILLION of BEST KENTISH GREY STOCKS ready for delivery, by barge, at a low price, for cash.

TO BUILDERS AND OTHERS REQUIRING BRICKS FOR USE OR INVESTMENT OF CAPITAL.
A BRICKMAKER is willing to give an equal SHARE of a valuable BRICK FIELD, now in full work, to any party finding half the capital with him. Highly respectable references given and required. Situate on three miles west of the Marble Arch.—Applications, by letter only, to A. B. to be left at No 16, Albion-street, Hyde-park.

HEAL & SON'S SPRING MATTRESSES.
The most durable Bedding is a well-made SPRING MATTRESS, it retains its elasticity, and will wear longer without repair than any other mattress, and with ONE French Wool and Hair Mattress on it is a most luxurious bed. HEAL and SON make them in three varieties. For prices of the different sizes and qualities, apply for Heal and Son's Illustrated Catalogue of Bedsteads and Priced List of Bedding. It contains designs and prices of upwards of 100 Bedsteads, and prices of every description of Bedding, and is sent free by post. HEAL and SON, 196, Tottenham court-road.

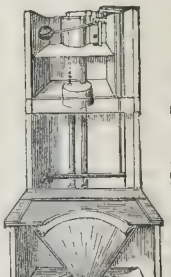
M medium.	B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

PURE GAS.—TO GAS COMPANIES, ENGINEERS, MANUFACTURERS, and OTHERS.
PATENT CLAY PURIFICATION No cheap process has yet been discovered for freeing gas from ammonia, and the removal of the bi-sulphuret of carbon (the monster nuisance of gas-burning) has been given up in despair. Clay removes both these impurities, and when taken from the purifiers the bi-sulphuret of carbon is visible, completely blackening the clay. The light of the gas is increased in proportion to the thorough purification. The properties of this patent are now ready for grant in terms for its use.—Terms, and directions for the employment of clay, may be obtained from Mr. JOHN WHITTAKER, Agent to the Patentees, Gas Works, Wakefield.

TERRA COTTA.—Vases, Figures, Capitals, Coats of Arms, Friezes, Consoles, Chimney-shafts, Flower Trays, &c. &c. manufactured by J. M. BLASHFIELD, Mill Wall, Isle of Dogs, near the West India Docks), and sold at No. 1, Praed-street, Edgware-road, Paddington.

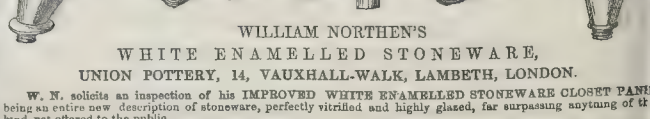
STEPHEN GREEN'S IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hoppers and other Pans, with best White Glaze inside

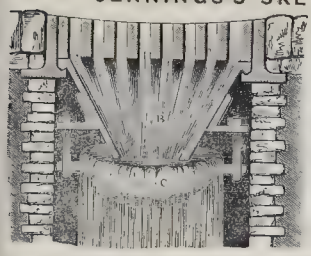
Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin.—The most effective Syphon-trap yet offered to the public.



This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.



Oxford, November, 1849.
GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

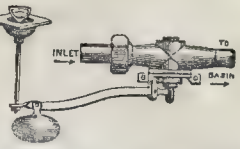
Royal Arsenal, Woolwich, June 24, 1852.
GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.
W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.
SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra

JENNINGS'S SKELETON GULLY TRAP.

BOARDS OF HEALTH, ARCHITECTS, and all persons interested in sanitary progress are respectfully invited to examine

JENNINGS'S PATENT IMPERISHABLE CLOSET, STREET GULLY, YARD, STABLE, AND SINK TRAPS, SLUICE VALVES, &c. &c.



BOARDS of HEALTH and LARGE CONSUMERS supplied with JENNINGS'S IMPERISHABLE WATER-CLOSETS in quantities at a SMALL ADVANCE on the charge usually made for the FILTHY HOPPER PAN, WITHOUT WATER SURFACE.

A Book containing Illustrations, Descriptions, and Prices can be had on application, or post-free if two stamps are enclosed to

GEORGE JENNINGS,
ENGINEER AND PLUMBERS' BRASSFOUNDER, 29, GREAT CHARLOTTE STREET, BLACKFRIARS-ROAD.

A SAMPLE CLOSET, WITH STOOL COCK, PACKED AND SENT TO ANY PART, ON RECEIPT OF A POST-OFFICE ORDER FOR THIRTY SHILLINGS.

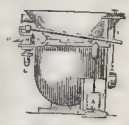
LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 49, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.



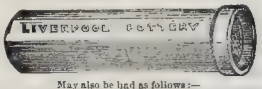
N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City road Wharf, City Basin; Dock-head, Bermondsey; Dauver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. J. TURNER 2, South Wharf, Praed-street, Paddington; and at COLWELL, Brothers, 33, Brydges-street Covent Garden.
Drawings and List of Prices will be forwarded free on application.

GREAT SIMPLIFICATION and Economy in FIXING CLOSETS.



By the use of Underhay's Patent Regulators, the separate cistern, service-box, valve, cranks, and wires are dispensed with, making a closet as simple to fix as a bib-cock, and yet ensuring a perfect flush of water.

The Manufacturers, CHARLES BOTTEN and SON, solicit a call from all parties interested, they having Pan, Valve, Self-acting, and Jennings's Closets fitted with this apparatus, and fixed for inspection, or will forward drawings of the same.

CHARLES BOTTEN and SON, Brass Founders, Engineers, Gas Meter and Fitting Manufacturers, Crawford-passage, Clerkenwell.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S

STONE WARE PIPES, BENDS, JUNCTIONS TRAPS, &c.

TO WATER COMPANIES AND PLUMBERS.

DEVEY and DALE'S CYLINDER BALL-VALVE and BALL, Registered Oct. 26, 1863. No. 3,696.

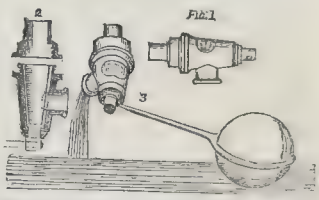

Fig. 1 represents the Cylinder Ball-valve in elevation. Fig. 2 is a Section of the Interior, showing the uninterrupted course of the Fluid. Fig. 3 shows the Cylinder Ball-valve in Action.

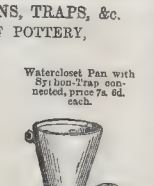
This Valve is peculiarly suited to High pressure. The greater the weight of fluid, the more secure the Valve becomes, and the more effectually prevents waste.—Manufactured solely by DEVEY and DALE, 8 and 9, Shoe-lane, and may be had of respectable Plumbers.



DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

STAFFORDSHIRE POTTERY.—

WILCOX, BARNARD, and CO. Earthenware Manufacturers. Mill-wall, Poplar—Closet-basins, urinals, bidet pans, pig-troughs, washhand-tables, beer-machine handles, closet-handles, basin-cocks, &c. toilet ware, fancy jugs, paste-pots, &c. white, printed, and decorated, delivered carriage-free to wholesale dealers within five miles of London.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

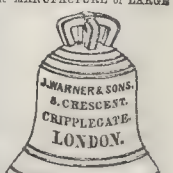
Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for hang. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

THE BUILDER.

SALES BY AUCTION.

TO CAPITALISTS.

WESTON-SUPER-MARE, SOMERSET.—TO BE SOLD BY AUCTION, in MAY next (unless previously sold by private contract), by Mr. THOMAS ALDRIDGE, at the Auction Mart, in Bristol, on the following day, at 12 o'clock, in one lot, a valuable and compact FREEHOLD ESTATE, comprising a capital BUILDING PLOT, situate in the most healthy and fashionable part of Weston-super-Mare, and commanding extensive sea views, and having a frontage to the Sea of about 200 feet, and a depth of about 300 feet, and is well adapted for the erection of a number of first-class residences, and is the only piece of land of any extent now remaining for building purposes on the Sea-front. The Estate is situate between the Grand Pier and the Royal Clarence Hotel, and is bounded on the North by the Sea, on the East by the Grand Pier, on the South by the Carriage Road, and on the West by the Royal Clarence Hotel. The Estate is in the occupation of Mr. Thomas Hill, as a yearly tenant, at the low rent of £30 per annum, and is subject to the payment of £1 per annum to the Lord of the Manor of Worle. The Estate is held for the residue of a term of 999 years, from Michaelmas, 1847, at a peppercorn rent. Plans of the Estate may be seen at the Offices of Messrs. Bevan, Braithwaite, and Bevan, Solicitors, Bristol; at the Auction Mart, Bristol; and at the Offices of Mr. Aldridge, Auctioneer, Weston-super-Mare.

Freehold Building Land, beautifully situate at Carshalton, Surrey.

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, opposite the Bank of England, on THURSDAY, APRIL 27, at TWELVE in three lots, about Twenty Acres of FREEHOLD BUILDING LAND, possessing frontages to good roads, most delightfully situate opposite Admiral Carter's Lodge, within a few minutes' walk of the Carshalton station, on the London, Croydon, and Epsom Railway, which is about half an hour's ride by railway from London. The land lies high, is very dry, and commands the most extensive views and is in a bright airy locality, proverbially healthy, and in the midst of good fishing, shooting, hunting, and coursing. The whole will be ready for sale before the end of September next, and a part for the erection of superior class residences, for which there is great present demand. Particulars, with plans, had at the Inns in the neighbourhood; of Mr. Hewitt, Solicitor, Carshalton; at the Auction Mart; at the Offices of Messrs. H. Brown and T. A. Roberts, 29, Throgmorton-street, City

To Builders and Others requiring choice and commanding Freehold Land in the West Side of London.—Important Freehold Building Land, in the capital Farm and Enclosed Buildings at Portobello, in the Parish of Kensal, on, between the Hour Walk and Bayswater Roads, up to the Great Western Railway and the Paddington Canal.

MESSRS. DANIEL SMITH and SON will SELL by AUCTION at the MART, on TUESDAY, APRIL 25, in Eighteen Lots, all of Twenty-three Acres (more or less) of rich FREEHOLD MEADOW LAND, in a fine, healthy, elevated spot, embracing all the frontages and a great extent of excellent and clear building land, important for immediate occupation, and either in Lots, or together, as a whole, and most suitable for Residence, with immediate capital ground rents, arising from paddocks, old cottages, and valuable accommodation lands, but a part of the unsold portion of the Portobello estate, offering an unassailable opportunity of acquiring an estate of superior public importance. Particulars and Plans will be severally published, and may be had at the Auction Mart, at the Royal Oak Inn, Paddington, of Messrs. Lowry, in the Edgware-road, of Mr. Sim, Architect, Elgin-crescent, Notting-hill; and of Messrs. Daniel Smith and Son, Land Agents, in Waterloo-place, Pall-mall.

The delightful Estate of Tettenhall Wood, near, and skirting the great and most picturesque boats of Wolverhampton.

MESSRS. DANIEL SMITH and SON will SELL by AUCTION, at the MART, in separate lots, previously made by private treaty, if not disposed of by public competition, at BIRMINGHAM, in MAY or JUNE next, in lots, a most important and remarkable freehold and manorial property, comprising Lots 1, 3, 4, 6, 7, 8, 9, 10, and 12, remaining in hand, forming the romantic woods and sporting on the town of Wolverhampton, on the great thoroughfare of Tettenhall Wood, with the handsome mansion, luxurious pleasure-grounds and gardens of Tettenhall. Also, as lot 11, TETTENHALL. This portion of the estate offers several most desirable building sites for the erection of mansions, with commanding views from the bustle of the town, combining a surprising extent of rich and splendid scenery, with a fine air. Also, as lots 2 and 5, the two valuable Farms and Homesteads, known as Tettenhall Wood Farm, in the occupation of Mr. Thomas Hill, as a yearly tenant, at the low rent of £30 per annum, and is subject to the payment of £1 per annum to the Lord of the Manor of Worle. The Estate is held for the residue of a term of 999 years, from Michaelmas, 1847, at a peppercorn rent. Plans of the Estate may be seen at the Offices of Messrs. Bevan, Braithwaite, and Bevan, Solicitors, Bristol; at the Auction Mart, Bristol; and at the Offices of Mr. Aldridge, Auctioneer, Weston-super-Mare.

TO ENGINEERS, BUILDERS, CONTRACTORS, FARMERS, AND OTHERS.—Unexpected Sale of valuable Materials, Portable Steam-engine, Saw-benches, &c. belonging to the Great Yarmouth Wellington Pier Company. TO BE SOLD BY AUCTION.

PETTINGILL, on the BEACH, near the Wellington Pier, Great Yarmouth, on WEDNESDAY, 19th APRIL, at 11 for 12 o'clock (at one precise), in convenient lots, the whole of the valuable TIMBER, square, straight, and well-seasoned, consisting of from 5 feet to 24 feet in length, 3in. to 12in. square; also a quantity of planking and quantity of dry and light fir scantling, deal ends, slabs, and drawings; two large oscillating troughs, fitted up with 14 brass cocks; two sets of side chains, and a quantity of small chain; several cwt. of screw bolts, heavy iron clasps, spike nails, &c.; four 16-inch solid iron rollers, seven crowbars, three 24-feet 3-inch scaffold poles, with two large iron tops, crosshead, &c.; a 20-feet 3-inch gossipin, with two large iron tops, crosshead, &c.; a 20-feet 3-inch gossipin, with two wheels, complete, from the Chickenhall factory; 23-inch circular saw, 3 inches of mandrel, weight iron cutting stationary steam boiler, 4 feet by 27 inches diameter, with three brass taps and safety-valve; steam engine, 3 horse power, with cover and leather strap, well adapted for agricultural purposes; iron wash tub, two small boats, a quantity of rope, &c.—For catalogues apply to Mr. Farrington, Solicitor, or to Messrs. Reynolds and Palmer, Solicitors, Regent-street, Great Yarmouth.

BRIXTON, SURREY.—Valuable Building Materials.

MESSRS. DAVIS and VIGERS are instructed to SELL by AUCTION, on the PREMISES (late the Lessee), the Valuable Company's Works, Brixton-hill, Surrey, near the Water Tower, adjoining Mr. NEWMAN'S, AUCTIONEER, at TWELVE for ONE, all clear the land, which will be ready for sale on one or more lots until after building purposes, the whole of the excellent BUILDING MATERIALS, comprising about 60 first-class bricks and paviors, 12, of red and white rafters, 6 0 feet of elm and fir plates, 1,000 feet of oak posts, 1,000 feet of fencing, 1,000 feet of deal boards, 1,000 feet of weather boarding, 6 doz. sashes, &c. May be viewed the day preceding the sale, and catalogues had of Mr. Hewitt, on the premises; the White Horse, Brixton-hill; and of the Auctioneers, 3, Frederick's place, Old Jewry.

Capital White and other Elm and Ash Timber, felled, and now lying up in the Golden Hall Estate, Rodwell, Essex, conveniently to good roads, rail, and water carriage.—TO BE SOLD BY TENDER by

MR. THOMAS CLOWSER, at TWELVE o'clock, on TUESDAY, APRIL the 18th, first, at the UNICORN INN, Romford. The timber consists of 176 ELMS and 20 ASHTREES. Particulars of fifty of the white trees are extremely fine, being from 40 to 50 feet in length, straight and clear, fit for navy or other purposes requiring first-class timber. The remainder is equally fine in quality, but of smaller scantling. Particulars and estimations of sale may be obtained of the Auctioneer, Mr. Thomas Clowsser, Highstreet, Hampstead; or of Mr. Smith, the Bailiff, on the Estate, who will show the timber.

Premises nearly opposite Albert-gate, Knightsbridge.

MESSRS. LESLIE and SON will SELL by AUCTION, upon the PREMISES, 34, St. George's-place, Knightsbridge, on WEDNESDAY, APRIL 19, at TWELVE, by order of the executor of the late Mr. Angus, the valuable LEASE of a SHOWSHOP and WORKSHOPS, with a frontage of 26 feet, held for ten years at 185l. a year; a small part, with a frontage of 12 feet, being underlet until 1854 at 90l. per year. The go-dwill of the trade of a coachmaker will be included in this lot.—May be viewed until the sale, and particulars had upon the Premises, of Mr. Rogers, 3, Upholstery, Old Broad-street, and of the Auctioneers, 45, Margaret-street, Cavendish-square.

SALES BY AUCTION.

Important Sale of Marble TO MARBLE MERCHANTS, STATUARIES, MASONS, BUILDERS, &c

CONTRACTS.

METROPOLITAN COMMISSION OF SEWERS.—TO BUILDERS and OTHERS.—The Metropolitan Commissioners of Sewers hereby give notice that they will be open at the Court House, No. 1, Greek-street, Soho-square, on TUESDAY, the 25th day of APRIL, 1854, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to contract for the LAYING DOWN, CONSTRUCTING and COMPLETELY FINISHING certain intended Brick and Pipe Sewers, 4,461 feet in length or thereabouts, with other works in connection therewith, in New-street and Rose-street, Covent-garden, and other streets and places in the respective parishes of St. Giles-in-the-Fields, St. Martin-in-the-Fields, St. Mary-le-bone, St. Ann, Soho, and St. Paul, Covent-garden, all in the county of Middlesex (in one Tender); 1,230 feet in length or thereabouts of Brick Sewers, with other works in connection therewith, in Frederick-street and Little Albany-street, and other streets and parishes in the parish of St. Pancras, in the county of Middlesex (in one Tender); 560 feet in length or thereabouts of Brick Sewer, with other works in connection therewith, in North Audley-street, in the parish of St. Marylebone, in the county of Middlesex (in one Tender); and for the maintenance of such works in complete repair for Twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained at the Principal Office of the said Commissioners, No. 1, Greek-street, Soho-square, until the 24th APRIL, 1854, between the hours of NINE a.m. and FOUR p.m. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square,
Dated this 13th day of April, 1854.

METROPOLITAN COMMISSION OF SEWERS.—TO BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commission of Sewers hereby give notice that they will meet at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 25th day of APRIL instant, at ELEVEN o'clock a.m. precisely, to open TENDERS for the SUPPLY OF MATERIALS and the execution of the DAY JOBBING and MEASURED WORKS of the said Commission, within the limits of the undermentioned districts, viz. Greenwich, Rotherhithe, Peckham, Camberwell, and Wandsworth districts, and the district west of the Wandle. The Tenders are to be upon the basis of schedules of prices, and the contracts are to be for one year from the date of the contracts and bonds, subject to determination in the manner stated in the conditions. Parties wishing to submit Tenders may, on payment of 10s. 6d. obtain printed forms with general conditions, particulars, description, schedules, plans, and drawings, on application at No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. No Tender will be received after ELEVEN o'clock a.m. precisely, on the said 25th day of APRIL; and any Tender which is not upon the printed form and schedules of the Commissioners, and duly signed by the party or parties tendering, will be rejected. The contract unless Tender shall be accepted will be required to enter into bonds with two responsible sureties, to be bound jointly and severally, in the sum of £50 for the due performance of the contract. The Commissioners do not bind themselves to accept the lowest or any Tender for the Contract.

E. H. WOOLRYCH, Secretary.

1, Greek-street, Soho-square, 13th April, 1854.

TO CONTRACTORS.

THE CORPORATION of NEWCASTLE-UPON-TYNE are desirous of receiving proposals for the duration, TENDERS from parties willing to CONTRACT for the SWEEPING and CLEANSING of all the public streets, lanes, alleys, and footpaths in the borough; also, for emptying all ashpits and receptacles of waste, and contract to dispose, to be provided by the contractor, all the sweepings, scraping, ashes, and other dirt. Such contract to be for a term of not less than three years, to commence from such time as may be agreed upon. Persons tendering for the above work must state the sum they will give for the manurage arising for the said term, or for what per centage they will undertake to dispose of it. A plan of the town and a specification of the work may be seen at the Office of the Town Surveyor, to whom, on or from ELEVEN till TWO o'clock, sealed Tenders, addressed "Contracts for Cleaning Streets," directed to the Sanitary Committee, will be received at the Town Surveyor's office, up to TUESDAY, 2nd day of MAY next.

Newcastle-upon-Tyne, March 23, 1854.

CONTRACTS.

TO CONTRACTORS.
Royal Engineer's Office, Chatham, April 6, 1854.

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 24th day of APRIL, 1854, from Persons desirous of Contracting with the Honourable Board of Ordnance,

For the ERECTION of an additional BARRACK STORE at CHATHAM BARRACKS, and for RENEWING sundry FLOORS and CEILINGS at CHATHAM and BROMPTON BARRACKS.

Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 22nd instant, Sundays excepted.

The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of £2 0 0, for the due performance of the Contract.

Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall mall, London, and to be delivered free, endorsed, "Tender for Works at Chatham."

No Tender can be admitted after the said 24th day of APRIL, 1854.

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer of the Woolwich District is better able to advise, that the Honourable Board of Ordnance are about to enter into a SPECIAL CONTRACT for BUILDING STABLES and ENCLOSURE FENCE, at SHOEBURY NESS, in the county of Essex; and that such persons as may wish to TENDER for the same, may inspect the plans, and obtain a copy of the specification and form of Tender for the work, on applying to lieutenant HAWTHORN, R.E. at Shoebury Ness, or to Mr. CARTWRIGHT, Clerk of Works, at the Royal Engineer-office, Royal Arsenal, Woolwich, on or before the 25th day of APRIL, 1854, between the hours of Ten and Four. Tenders upon the printed form) prepaid, to be delivered at the Office of Ordnance, Pall-mall, London, on the 27th APRIL, 1854, addressed to the Secretary to the Honourable Board of Ordnance, and marked "Tender for Works at Shoebury Ness." The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders. Woolwich, April 1, 1854.

Royal Engineers' Office, Chatham, 20th April 1854.

NOTICE is hereby given, that TENDERS will be received at the ORDNANCE-OFFICE, PALL-MALL, London, on or before MONDAY, the 8th of MAY, 1854, for the performance of the following branches of ARTIFICERS' WORK, for the Ordnance Department, at the following stations, in the Medway District, from 1st July, 1854, to 31st March, 1858, both inclusive, determinable at any period after one year, on either party giving to the other three months' notice in writing, viz:—

CARPENTER'S WORK, &c.	SLATER'S WORK.
BRICKLAYER'S WORK.	MASON'S WORK.
PLASTERER'S WORK.	PAVIOR'S WORK.

The Stations are Chatham and its exceptions and Gravesend and its environs, comprising Tilbury Fort and Shorne Mead Battery, together with Coal House Pond Barracks, which are noted separate Tenders to be made for the two Stations, as well as for the different trades, nevertheless, Tenders may be submitted for all the trades together, in one contract, for each Station.

Printed forms and schedules of contract may be obtained on application at the Royal Engineers' office, at Chatham; and at Gravesend, from the 24th instant to the 5th MAY (Sundays excepted), and no Tender can be admitted after the said 5th day of MAY, 1854.

* * The Board of Ordnance reserve to themselves the right of rejecting any or all Tenders that may be presented.

TO CONTRACTORS.
Royal Engineer's Office, Chatham 20th April 1854.

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before THURSDAY, the 11th day of MAY, 1854, from persons desirous of contracting with the Honourable Board of Ordnance,

For SUPPLYING and FIXING IRON FITMENTS to TWENTY-TWO TROOP STABLES, and PAVING the same with GAYFERE PAVING, at BROMPTON BARRACKS, near CHATHAM.

Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineers' Office, Chatham, between the hours of TEN and FOUR, till the 10th MAY next, Sundays excepted.

The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities jointly and separately to be bound under a penalty of £2 0 0, for the due performance of the Contract.

Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed "Tender for Works at Chatham."

No Tender can be admitted after the said 11th day of MAY, 1854.

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

TO IRONFOUNDERS AND GASHOLDER MAKERS.
ALTERATION AND EXTENSION OF TANK.

PARTIES desirous of CONTRACTING for the CONSTRUCTING and ERECTING of a GASHOLDER, single lift, in the premises of the Wickford Gas Light Company, 100 feet diameter and 40 feet 4 inches deep, together with all the requisite columns, guide rods, girders, inlet and outlet pipes, syphons, valves, pumps &c. may inspect the plans, sections, and specifications, and obtain forms of Tender at the Offices of Mr. CLAPHAM, Civil Engineer and Surveyor 21, Barstow-square, on and after WEDNESDAY, the 26th APRIL until MONDAY, the 1st day of MAY, inclusive, by which day and not later than TWO o'clock in the afternoon, all Tenders are to be delivered free for Erection at the Office of Mr. CLAPHAM'S Offices. The lowest Tender may or may not be accepted.

24, Barstow square, Wakefield, 28th March, 1854.

CONTRACTS.

THE GREAT NORTHERN RAILWAY COMPANY. To CONTRACTORS and BUILDERS.—The Directors are prepared to receive TENDERS for the ERECTION of FIFTY COTTAGE DWELLINGS, at the Coal Kounie Station, near Peterborough. Parties disposed to Tender may inspect the plans, and obtain the specification and a form of Tender in which form only Tenders will be received, upon application at this Office, on or after TUESDAY next, the 4th of APRIL. Tenders, sealed up and marked "Tender for Cottages," must be delivered at this Office, before TWELVE o'clock at noon, on TUESDAY, the 25th day of APRIL next, when parties Tendering must be in attendance.

N B The Directors do not bind themselves to accept the lowest or any Tender. By order,

J. B. MOWATT, Secretary.

Secretary's Office, King's-cross Station, London, March 31, 1854.

SEWERAGE MANURE.—The Commissioners for Improving the Town of Northampton are desirous of entering into a CONTRACT with any person who may be disposed to desiccate and convert into SEWERAGE MANURE the matter drawn from the culverts of the town. The Commissioners would be disposed to deal in a liberal manner with any party who would make a Proposition for the Erection of effectual Works necessary for the purpose. Every information respecting the above may be had on application from Mr MARKHAM, the Clerk to the Commissioners, or Mr HULL, their Surveyor.

CHR. MARKHAM, Clerk to the Commissioners.

Northampton, April 7, 1854.

SEWAGE MANURE.—THE DARTFORD LOCAL BOARD of HEALTH hereby give notice, that they are prepared to receive CONTRACTS with competent parties for the DISPOSAL of the SEWAGE of that town for the purpose of preparing and delivering on the outlet or point of discharge for the same, on the north side of the town, and adjoining the Dartford Creek, a situation which offers great facilities for its intended disposal, that the contractor will have to engage to purify a certain space of the liquid patron, when discharged into the Creek, from the noisome effluvia, and to carry away the same. All the land, buildings, works, and machinery that may be requisite for the temporary or permanent, and discharge into the Creek, will have to be provided, erected, and maintained by the contractor at his own expense; and at the expiration of the term, all such land, buildings, works, and machinery are to become the property of the Board. The proposals are to state the mode of purification proposed to be adopted, the term for which the service is proposed to be taken, and what annual sum will be paid for the same to the Local Board. The order of the service may be inspected, and further information obtained by applying to Mr. JOHNSTON, the Surveyor; and to Mr. HAYWARD, the Clerk to the Board, at Dartford. Proposals to be sent to Mr. HAYWARD on or before WEDNESDAY, the 26th APRIL inst. endorsed, "Tender for Sewage."—By order of the Board,

Dartford, April 5, 1854. JOHN HAYWARD, Clerk.

TO BUILDERS.

TENDERS to CONTRACT for the ERECTION of LOCK-UP HOUSES at WINSLOW, LINSLADE, FINNY STRATFORD, QUAINTON, BRILL, and GREAT MARLOW. Persons willing to CONTRACT for BUILDING LOCK UP HOUSES at all or any of the Towns and Places above mentioned, in the county of Buckingham, are invited to inspect the plans and specifications of the work prepared by Mr. BRUNTON, of No. 7, Great Russell-street, Bloomsbury, London, Architect and Surveyor to the Penitentiaries for executing the Works of all or any of the number of such intended Lock up Houses, on or before the 25th of APRIL instant. The general plans and specifications may be seen at my Offices in Aylesbury, on any day after the 17th of APRIL instant. One copy of the same may be seen at the Office of Mr. D. T. WILLIS, at Winslow, from the said 17th day of APRIL up to and including the third day of APRIL. After that date at the Office of Messrs ALLEN and NEWTON, in Leighton Buzzard, from the 21st of APRIL up to and including the 24th of APRIL; and one other copy at the house of WILLIAM WHADCOAT, the superintendent constable, at Fenny Stratford, from the 27th day of APRIL instant up to and including the 22nd instant. And that day at the house of THOMAS HIGH, the superintendent constable, at Brill, from the 24th of APRIL inst. up to and including the 28th inst.; and another copy at the Office of Mr HOLLIER, Solicitor, Uppingham, from the 17th day of APRIL instant up to and including the 22nd inst. After that date at the Office of Mr. W. L. WARD, Solicitor, in Great Marlow, from the 24th of APRIL instant up to and including the 28th instant. The Magistrates of the County do not bind themselves to accept the lowest or any of the Tenders; but they will accept such one or more as, under all circumstances, they may deem most eligible.

ACTON FINDAL, Clerk of the Peace for Bucks.

Aylesbury, April 14, 1854.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of OFFICES for "The Conservative Land Society," on a plot of ground lately Nos. 7 and 8, Norfolk-street, Strand, may inspect the drawings at the Office of the Architect, on and after MONDAY, APRIL 24th, next. The Executive Committee do not bind themselves to accept the lowest or any Tender.

GEORGE MORGAN, Architect, 5, Chancery-lane.

BROKEN and UNBROKEN GRANITE. TO BE SOLD by PUBLIC AUCTION, by Mr. ROBERT MILLER, at the Auction Mart, London, on WEDNESDAY, the 3rd day of MAY next, at SEVEN o'clock in the evening, in the following LOTS, for the supply of such quantities of unbroken and broken GRANITE, to be delivered at such times and in such manner as may be directed by the Surveyor to the Trustees. The Tenders to contain the names and addresses of two responsible parties as sureties for the due performance of the contract. The Tenders to be delivered at the Auction Mart, and must be received before TWELVE o'clock on the day of sale, or they will be rejected, as the Trustees do not bind themselves to accept the lowest or any Tender.

April 22, 1854. JAMES SALGROVE, Clerk.

[For remainder of Contracts see next page.

CONTRACTS.

MIDLAND RAILWAY.—The Directors of the Midland Railway are prepared to receive TENDERS for CONTRACTS for the EXECUTION of the whole of the new Lines to be made to keep pace with Stations and Buildings on the South Branch (the Midland Railway between Derby and Rugby), in proper and efficient repair, for a term of seven years. The specification and forms of tender may be seen, and form of tender obtained upon application at the Engineer's office, Derby Station, on and after MONDAY next. Tenders to be directed to the Secretary to the Way and Works Committee, Derby Station, not later than TEN o'clock on TUESDAY, the 2nd day of MAY next. The Directors do not bind themselves to accept the lowest or any Tender.

Derby, April 10, 1854. JOSEPH SANDERS, Secretary.

TO MASONS AND OTHERS.

BRISTOL GENERAL HOSPITAL.—The Building Sub-Committee are desirous of receiving TENDERS for the EXCAVATORS, BRICKLAYERS' and MASONS' Work requisite to complete all the Foundations of the Inward and Lying-in Hospitals, the Work therein being to be executed in the most substantial manner. The quantities may be had on application to Mr. WILLIAMS, Builder, Stoke Newington, and upon the premises, on and after Monday next. Tenders to be delivered at the Secretary's Office, Bristol Infirmary, addressed to the Building Sub-Committee, on or before TEN o'clock on THURSDAY, the 27th inst. The Committee do not bind themselves to accept the lowest or any Tender.

W. R. GINGELL, Architect.

St Werburgh's Chambers, Broad Street, 12th April, 1854.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a WAREHOUSE in Stamford-street, Castle-gate, Nottingham, are informed that the Plans may be seen, and further information obtained, at the Offices of Mr. T. C. HINE, Architect, Nottingham, April 6, 1854.

TO ROAD MAKERS AND GENERAL CONTRACTORS.

PERSONS desirous of CONTRACTING for supplying and laying the KERBING required for the proposed new Roads in Nottingham-park, may obtain the particulars of the same at the Offices of Mr T. C. HINE, Architect, Nottingham, April 6, 1854.

EXTENSION OF TIME.

MILITIA BARRACKS, NORWICH and YARMOUTH. Persons desirous of TENDERING for the above Works may inspect the plans and specification at the Office of the Architect, Mr. JOHN BROWN, Upper King-street, Norwich, on and after the 8th day of MAY next, instead of as previously advertised. Tenders to be addressed, Tender for Militia Barracks, and addressed to Mr GEORGE MONEY, Clerk of the Inspectorate, to be delivered at the Office of the Architect, at Leeds on the 8th day of MAY next 1854 instead of as previously advertised. The party whose Tender may be accepted will be required to enter into Bond, with two approved and respectable sureties, for the due performance of his contract.

Norwich, April 10, 1854.

TO GASHOLDER BUILDERS AND IRONFOUNDERS.

TO CONTRACTORS.

THE DEWSBURY LOCAL BOARD of HEALTH is prepared to receive TENDERS for the CONSTRUCTION of a SEWER, RIVER and RECEIVING CISTERN, together with Pedestals, Weir and Tunnel, on the Manor estate and Shaw-lane. The Sewer is to contain forty millions cubic feet of water. Plans, sections, &c. may be seen at the Office of WILLIAM RANGER, Esq. C.E. 9a, Pall-mall, London; also at the Office of the Resident Engineer, at Dewsbury, on and after the 20th inst., and copies of the specifications and conditions may be obtained at my Office, on payment of five shillings each. Tenders, sealed and addressed, "Tenders for Dewsbury Sewerage Works," to be delivered at my Office at Dewsbury, on or before 9 o'clock on Monday, the 1st day of MAY next.

CHAS. OLDROYD, Clerk to the said Local Board.

Dewsbury, April 13, 1854.

TO ROAD CONTRACTORS AND OTHERS.

THE Committee of the City of London and Tower Hamlets Cemetery are desirous of receiving TENDERS for CONTRACTING the ROADS, DRAINS, and other Works, in connection therewith, at their Cemetery, Ilford, Essex. Plans and specifications may be had at the Office of the Society, Finsbury-chambers. Tenders must be delivered, sealed and addressed, and copies of the specification and conditions may be obtained at my Office, on payment of five shillings each. Tenders, addressed to the Committee of Management, to be delivered at my Office, 3, Finsbury-chambers, on or before 12 o'clock on THURSDAY next (not Tuesday, as previously advertised), the 27th inst.

J. HIGHAM, Secretary.

TO PAVIORS, MASONS AND OTHERS.

THE COMMISSIONERS for PAVING, &c. KENSINGTON and Pavements will meet at their usual Room, Jun in-place, Kensington, on FRIDAY, the 28th of APRIL next, at ONE o'clock in the afternoon precisely, to receive TENDERS from PERSONS willing to CONTRACT DOWN, separately erected, the following ARTICLES, at the said Jennings-place, viz.:—Granite Kerb, Paving Setts, Curbing ditto, Portland Stone Kerb, York Paving, and Dressed Granite Flags. Printed Forms of Tender and further particulars to be obtained of Mr. W. H. SMITH, Surveyor, at his office, Jennings-place, Kensington, from ONE to TWO o'clock. Each parcel must be separately sealed and delivered at the office described, on or before Monday next, the 1st day of May next, at which time and place the Commissioners or such of them as shall then be present will proceed to open the Tenders in the presence of such Contractors as may attend.

JOSEPH SALTER, Clerk to the Commissioners.

3, Montague-place, April 13th, 1854.

CONTRACTS.

LONDON and NORTH-WESTERN RAILWAY COMPANY.—OLDHAM BRANCH CONTRACT. The Directors are prepared to receive TENDERS for the execution of the works of the above contract, which includes the CONSTRUCTION of a TUNNEL 1,300 yards in length, and all requisite Excavations, Embankments, Bridges, Culverts, Retaining Walls, Permanent Approach Roads, the Sleeper, Ballasting, and Laying of the Permanent Way, and all contingencies of every description. The maps and plans will be furnished by the Company's Engineer, and specification may be inspected, or information obtained, at the Office of the Engineer, 18, Duke-street, Westminster, where printed forms of tender may be obtained, and any requisite explanations as to the intended works will be given. Tenders, marked "Tenders for Works, Oldham Branch," addressed to the Secretary, must be delivered, must be delivered at the Company's Offices, London-road Station, Manchester, not later than TEN o'clock a.m. on the 18th day of MAY.—The Directors do not bind themselves to accept the lowest Tender in order.

CHAS. E. STEWART, Secretary.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a GENTLEMAN'S HOUSE, Stables, and Offices, at 88, Parade, near Cardiff may see the drawings and specifications, and obtain particulars at the Offices of the Architects, Messrs. WISEMAN and HABERSHON, 33, Bloomsbury-square, London, and 5, Park-place, Newport.—Tenders to be delivered at Cardiff on THURSDAY, MAY 4, at HALF PAST TWO o'clock precisely. The Architects do not bind themselves to accept the lowest or any of the Tenders.

TO PAVING CONTRACTORS.

PARTIES willing to TENDER for the PAVING and CURBING of the CARRIAGE-ROADS and FOOTPATHS on the Estate of the Society for the Erection of Model Dwellings in Nottingham, embracing an area of about 5,000 square yards, may inspect the plans and specification on application at my Office until THURSDAY, the 27th inst. The lowest Tender is not necessarily accepted.

J. S. NORRIS, Architect.

Market-street, Nottingham, April 18, 1854.

ROYAL MARINE MINISTRY.—Copenhagen, 24th March, 1854. Notice is hereby given that it has been resolved to CONSTRUCT a DOCK at the ROYAL NAVAL YARD at COPENHAGEN, for the Repair of Vessels of War, and that this Work shall be done by Contract. It will be duly announced where full particulars of the works and the conditions of the Contract will be exhibited; also when and to whom the Tenders are to be transmitted.—By order of

FLETCHER WILSON, Consul-General.

Danish Consulate General, London, 18th April, 1854.

NEW CONGREGATIONAL CHAPEL, HALIFAX. The Time for receiving the TENDERS is POSTPONED until the 4th of MAY.—JOSEPH JAMES, Architect, 13, Furnival's-inn, London.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c. Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 30, WHARF, Macclesfield-street, North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC" is the exclusive right of the Proprietor. And, thirdly, that the "Reports on Tiles," No. 3, page 581, of the Great Exhibition, rank the Manufactories known so long as "The Terras," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS. MAW and CO. send free, per post, their NEW BOOK with prices, adapting this most durable, economical, and decorative production of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient building.

TO MASONS, PLASTERERS, AND CARPENTERS.

A BRICKMAKER, having five or six houses to finish, will SUPPLY STOCK BRICKS, in exchange for work, or other of the above trades, at a good economy for such work and bricks. Situation three miles west of the Marble Arch.—Further particulars of Mr. HALL, 5, Avenue-road, Shepherd's Bush.

TO BRICKMAKERS AND CAPITALISTS.

TO BE DISPOSED OF, on advantageous terms, the LEASE and PLANT of a BRICKFIELD, now doing a good business.—For particulars inquire of Mr. JOSEPH SAWYER, Accountant, 173, Fenchurch-street, London.

TO BUILDERS AND OTHERS REQUIRING BRICKS FOR USE OR INVESTMENT OF CAPITAL.

A BRICKMAKER is willing to give an equal SHARE of a valuable BRICKFIELD, now in full work, to any party finding half the capital with him. Highly respectable references given and required. Situate on three miles west of the Marble Arch.—Applications, by letter only, to A. B. to be left at No. 10, Albion-street, Hyde-park.

TO BRICKMAKERS.

A GENTLEMAN, having a very extensive connection amongst the largest builders and contractors in London, would be glad to SELL BRICKS at a moderate commission. He could also procure advances on monthly deliveries. The highest references can be given if required. Address, A. B. Y., Office of "The Builder."

CHEAP, CHEAP DRAINING.—TO BE SOLD, a large quantity of SUGAR MOULDS, for a half-penny and a penny each; to be seen at any time at the well-known PARVS POTTERIES, Church-street, Deptford, Kent, near the Railroad.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O G Gutters, Socket Pipes for Water or Gas, Air Pipes, Syphon Pipes and Connections, Sash Weights, and other castings; Iron-work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 30,000 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete, safest, and healthiest, and most powerful ventilation, without any machinery, are obtained by BOLLESVE'S PATENT CALORIFERE. The constant supply of fresh air causes a most refreshing feeling. The new well-improved process, all lamp or vitriated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, gardens, and green houses. The Calorifere has been adopted by the Grace the Duke of Bedford at Woburn Abbey by several architects, and it may be seen in operation in many places in London and country. Apply, per post, to T. BOLLESVE, French Engineer, 5a, King William-street, City.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm enclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles, for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of that in use at this material in the Slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application at

OFFICES, Gateshead-on-Tyne.
130, Strand, London.
67, Hope-park-street, Glasgow.
27, Dale-street, Manchester.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

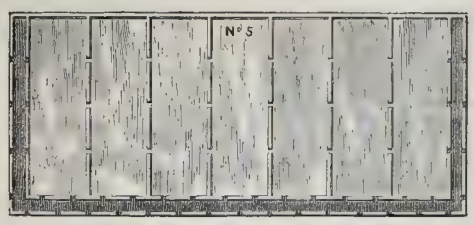
ANDREW CLARK and COMPANY, PLUMBERS, THE BEAR GARDEN LEAD WORKS, SOUTHWARK.

Sole Manufacturers of Dilbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.



GAS FITTINGS, &c.—TO ARCHITECTS, SURVEYORS, AND BUILDERS.—Messrs. JAMES JONES and CO. 28, 29, and 30, Bow-street, London, are prepared to execute artwork and materials for temporary lighting during the erection of buildings at a small per centage on the prime cost. Buildings in carcase fitted up with service and branch supplies for the other portion of gas and water in wrought iron tubing or otherwise, at the lowest competing prices. Every description of materials supplied at the lowest terms to those who fix their own work. Plain and ornamental brass work, gas fittings and apparatus for cooking, heating, and ventilation in the greatest variety, and on most approved principles. Price-lists sent on application, enclosing postage-stamps.

N.B. The Flange A prevents them from shifting when trodden on or being forced up.

ILLUMINATING AREA GRATINGS, thick Glass fitted, 5 or 10-inch openings of any length or number, at per foot super. 12s.

ILLUMINATING PAVEMENT LIGHTS, with Flange, as A, and Glass Lenses, 30s. each, 21 inches diameter.

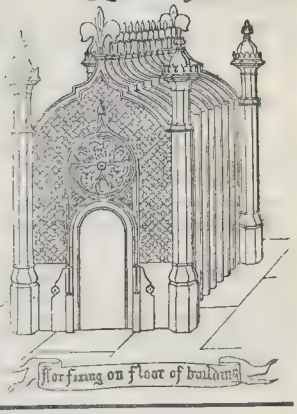
HAYWARD (BROTHERS), MANUFACTURING IRONMONGERS, 196, BLACKFRIARS-ROAD.

Gill Stove.

for firing underground

STUART AND SMITH'S
PATENT GILL STOVE,
FOR
HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,
ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

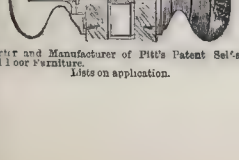
It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

Gill Stove.

for firing on floor of building

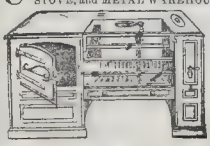
NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, just completed for two kitchens in the above building. A great variety in stock upon the same principle. Gas Baths from £7 by which a warm bath may be obtained for three-halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated dry Gas Meters—5,000 in use. Testimonials at the Office, 145, Regent-street. Manufactories removed from Hampstead-road and St. Martin's-lane to more extensive premises, New-road, near Albany-street.



HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; Improved Boilers, requiring no brickwork; Warm Air Apparatus, &c.—Apply to SPILLER and TAYLER, Engineers, Battersea.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Blagg's, delivered at a meeting of the Architectural Society, wherein Mr. Blagg shows that heating by hot water is truly the only effective system applicable to warming churches and other large

buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth, throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.



GEORGE HART, 253, STRAND, Near Temple-bar.
WHOLESALE, MANUFACTURING, AND FURNISHING IRONMONGER.

Proprietor and Manufacturer of Pitt's Patent Self-adjusting Spindle Floor Furniture.
Lists on application.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and ourselves to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 139, Shoreditch.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler.

30	32	34	36 inch.
26s.	30s.	34s.	38s.

Best Self-acting Ranges, with Oven and Back Boiler, Bright Wrought Bars—

21	30	34	42 inch.
4l.	5l.	6l.	8l.

Strong Elliptic Stoves, with Extra Back and Solid Bars, per in. 2½d.

Register Stoves, with Solid Bars, per inch, 5d.
Best ditto, with Fire Brick Back, per inch, 10d.
Bright Stoves, with Two Fires, 50s. to 100s. each.

Cast Rain-water Pipe	2	2½	3 inch.
	1½d.	1s. 5d.	1s. 6d. per yard.

Cast Gutters 4 inch, 11d. per yard.

1 inch Cut Lath, 12s. Cast Lath, 11s. 6d.

Patent Line	3	3	4	5	6
	4½d.	5d.	7d.	9d.	1s. per knot.

6-inch R.I. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.

Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.
Brick Moulds kept in stock. Any size made to order.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEILL and STEDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

THOS. B. LAWRENCE and CO. Zinc Dealers and Manufacturers, 10, York-place, Lambeth, having removed to their new premises, are selling SHEET ZINC at 32s. per cwt.; Perforated ditto, at 3d. per foot; Hair-pipes, 3 in. 4d. per foot; Gutters, 4 in. 4d. per foot, and in proportion. Chimney-shafts, Cowls, &c. equally cheap. Plumbic Zinc, 32s. Zinc Paint and fish-armed iron Plates. A prize medal was awarded them at the Great Exhibition.
Agent and Maker of HIGHTS'S PATENT SMOKE VENTS.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus (the works erected complete). And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed in the most reasonable terms. Sluice Valves, Steam and Range Boilers, and every description of Smiths' Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.
Register Stoves, 4½d. 6d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 2l. 18s.; 3 ft. 6 in., 3l. 5s.; 4 ft., 3l. 18s.
3 feet Cottage Ranges, with ovens and back boilers, 35s. each.
3-feet self-acting ditto, ditto, 30s. each.
Air Bricks, 4s. per doz. Best Town Grate, 45s. Ditto, Scotch, 65s. per cwt.

Best Patent Sash Line.

1	2	3	4	5	6
4s 6d.	5s.	6s.	7s 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube and Copper Wire, Gas Pendants, Brackets, and Joints of all descriptions for the fitting, in Brass and Iron; Tin, Compo-metal, Iron and Block Tinning, Copper-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers. Castings in Zinc and Common Brass, Gun Metal, &c. &c.
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10 11, and 12, Charles-street, Long-acre, London.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, cabinet, coach-house, and other gates and doors of large and small dimensions, a cwt. of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, shear-mills, &c.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET-MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads, 1s. 6d.
Best fine Cut Clasp and Rose { 18s. 6d. 18s. 6d. 17s. 6d. 17s. 16s. 6d.
Sash Weights. Air Bricks, 3s. per doz. Hooping for hand, 12s. per cwt. Cast Lath, 11s. 6d. per cwt. Sash Pullies, 8s. 6d. per gross.
Arnott's Ventilators, 4s. each. Elliptic Stoves, with double backs, 24s. per inch.
Register Stoves from 5d. per inch.
Improved Self-acting Ranges with oven and boiler { 30 32 34 36 inch. / 32s. 30s. 36s. 34s. each.
Best Self-acting Ranges, with oven and boiler, wrought bars and bright fittings { 36 38 40 inch. / 56s. 58s. 60s. each.

An extensive stock of bright and black Register Stoves in every variety of design, at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger plates, Levers, and Bell-pulls, en suite.

BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.

The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming ironmongery can here select whatever they require at WHOLESALE PRICES.

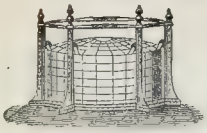
WALMSLEY'S new Show-rooms are now open with a Modern and Choice Stock of General Furnishing Ironmongery unequalled in variety, and all at unprecedented low prices.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings.

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark, and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD AND ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of this material equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc is not requiring to be more than one fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

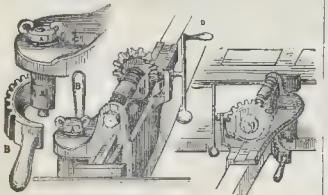
For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11	Gauge weighs about	18	oz.	per foot super.	Price per ton.
No. 12	"	"	20	oz.	do.	do.
No. 13	"	"	23	oz.	do.	do.
No. 14	"	"	26	oz.	do.	do.

£48 0 0

For further particulars apply to



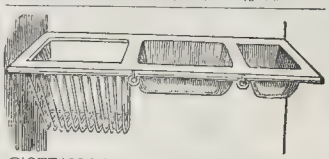
MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE,

WOLVERHAMPTON.



A. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, mute the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a bench cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron, Brass, Brass Foundry, Nails (wrought and cut), Copper and Zinc, Patent Locks of all descriptions; Chains, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, as used at the new registered Venetian Ventilator, so much admired, &c. &c. (cash).

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope street, Clare-market, London.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED. These Locks are recommended to the public for their simplicity, durability, and perfect security; also, Parnell's Patent NOISELESS BOX STAPLES and Striking Plates, Fire-proof Safes, Deed and Cash Boxes, Copying and Lever Presses.—Descriptions and lists of prices may be had at the Depôt, 32, Strand, gratis.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements Registered and Patented. Every article in Stable Furniture on show.
COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

JOHN WALKER,

CORRUGATED IRON ROOF and BUILDING MANUFACTURER,

And GENERAL CONTRACTOR.

Works—Mill Wall, Poplar, London; and Gillbrook, Birkenhead,
Offices—Corner of Arthur street West, London-bridge;
late 63, Gracechurch-street.

THOMAS EDINGTON,

IRON MERCHANT AND CONTRACTOR,

Inspector of Railway Bars and Castings,

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Tie Bars, Columns, Girders, Socket Pipes, Rain water Pipes, Gutters, Raining and Palisading Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

THE PATENT GALVANIZED IRON TUPPER and CARR,

Owners of Crauford's Patents, and Successors to
THE GALVANIZED IRON COMPANY,

Supply Patent Galvanized Sheets, plain or corrugated, for roofing, &c. Water or Gas Pipes, Castings, Wire of all gauges, Guttering, Hooping, &c. Wholesale, retail, and for export.

An allowance to the Trade.
GALVANIZING WORKS,
REGENT'S CANAL DOCK, LIMEHOUSE,
BROAD-STREET and BERKLEY-STREET, BIRMINGHAM,
LONDON OFFICE, 3, MANSION-HOUSE PLACE.

IRON BUILDING AND ROOFING WORKS, BIRMINGHAM.

PORTER (BROTHERS) AND STUART,

(LATE JOHN H. PORTER),

IRON FOUNDERS, SMITHS, AND MANUFACTURERS OF CORRUGATED IRON.

PATENT GALVANIZED IRON. (IMPROVED PROCESS.)

JOHN SYMONDS and CO.

WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE of every description, superior in all respects to that produced by any other process; THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c. Roofs fixed complete.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES,

a complete LIST of which
will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Bise-lane, London.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.

F. P. M'CARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GASWORK.—pendants, brackets, chandeliers, &c.; compo, tin, and iron gas piping, and fittings in general; sheet zinc, galvanised iron, tin plates, iron wire, &c.; best lacquer, 1s. per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp.—Observe, 7, Beech-street, Barbican.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL-HANGERS, AND THE TRADE IN GENERAL.

WHOLESALE IRONMONGERY WAREHOUSE, 18, Blandford-street, Manchester-square (running out of Baker-street, Portman-square), where a large stock is always kept on hand for the exclusive supply of the above trades.
JOHN YOUNG, Birmingham and Wolverhampton, Agent and Factor.

TO GAS AND WATER COMPANIES, CONTRACTORS, AND SHIPPERS.

CAST-IRON SOCKET-PIPES and Patent TUBING, with Connections of all sorts:
RETORTS OF IRON AND CLAY; FIRE BRICKS AND FIRE CLAY.

All kept in stock, and sold at wholesale prices.
Tanks, Purifiers, &c. fitted up complete, in London, the country, or any part abroad.
JOHN BURNETT AND CO. 66, BANKSIDE, SOUTHWARK.

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave place, Pimlico.—All works of art in the various metals executed at the above foundry.

TO ARCHITECTS AND BUILDERS.

CHUBB'S WROUGHT-IRON and FIRE-PROOF DOORS and FRAMES, for strong Rooms. A large stock of the above of all sizes, made in the best manner, and of different strengths, fitted with CHUBB'S PATENT DETECTOR LOCKS, throwing from two to twenty bolts, constantly on sale, at very moderate prices. FIRE-PROOF SAFES of every size, and Patent Detector Locks and Latches for all purposes.—C. CHUBB and SON, sole Manufacturers, 57, St. Paul's Churchyard, London.

PATENT CAST IRON SINKS, with TRAP complete, of the following sizes: 2 feet, 5s. 6d. each; 2 feet 6 inches, 7s. 8d. each; 3 feet, 8s. 6d. Also, about Ten Tons of Half-round Gutters, more or less broken, to be sold considerably below the usual price.—At J. JONES'S, No. 6, Bankside, Southwark.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's canal-basin, Regent's-road, Limehouse, London. J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges, Wire of every gauge, and Wire Netting of all descriptions, Guttering, Rain-water, Screwed Gas and Water pipes; Hooping, Castings, Furnace-pans, Baths, Buckets, &c. wholesale, retail, and for export. Every description of Ships' Ironwork Galvanized; Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

212° SAFES.—MILNER'S HOLDFASTS, fire-resisting by means of the only perfect non-conductor, vaporisation, are the strongest, best, and cheapest, because the only effectual safeguard against fire, robbery, or violence, for ledgers, deeds, cash, or valuables. Lord Chief Justice Campbell, in summing up on the late trials for infringement of MILNER'S SAFES, was pleased to observe: "He must say he had been astonished to find such strong evidence of their usefulness; up to this hour he had no idea that there were any human means of so effectually preserving papers from the action of fire. It was a comfort for one to know that there was such an invention, by which valuable documents might be rendered secure, notwithstanding

THE BUILDER.

THE PERMANENT WAY COMPANY, 36, Great George-street, Westminster. To Railway Directors and Engineers.—The increased traffic of all kinds upon Railways, which has led to the adoption of very heavy engines, together with the high speeds demanded by the public, has caused great wear and tear of The Permanent Way, and in a great measure the construction of the road remains the same as when at first designed for far lighter traffic. However safe the road may have been for the work at first anticipated, it is manifest, from frequent accidents, that more security for the public is required.

THE PERMANENT WAY COMPANY possess many valuable patents relating to the permanent way of railways, including inventions by the following Engineers:—

Adams, W. B.	Hoby, J. W.
Ashcroft, P.	Macneill, Sir John
Barlow, P. W.	May, Charles
Barlow, W. H.	Richardson, Robert
Braff, J. S.	Samuel, James
Gardner, John	Wild, Charles H.
Gordon, L. D. B.	&c. &c.
Guitard, C. F.	

The Company solicit the attention of Boards of Directors and Engineers to the advantages offered, not only by the patent improvements applicable to old lines, but also to several equally valuable inventions applicable to the construction of new railways.

For the purpose of improving existing lines of rail, the Company draw especial attention to their patent improved FISH-JOINTS and FISH-CHAIRS, by which the following advantages are secured:—

1st. Almost perfect security against the trains running off the line, the rails being practically converted into a continuous bar of iron.

2nd. Increased comfort to travellers, from a great reduction in the oscillatory movement of the carriages, and the absence of the clicking noise occasioned by the wheels striking the uneven ends of the rails.

3rd. The road being smoother, there results a proportionate saving in the power required for traction; and the wear and tear, both of the rolling stock and the permanent way, is much reduced.

4th. Hence the rails last much longer, and this may be safely estimated at from a fourth to one-third.

5th. A large reduction in the labour of maintenance of way.

On the Cambridge Line of the Eastern Counties Railway, where the longest experience has been obtained with the Fish-joints and Fish-chairs, the saving in maintenance of way has been fully fifty per cent. of the amount formerly paid for labour; and an extensive contract for a term of years recently undertaken for one of the Trunk Lines in England, attests the fact that one mile and three-quarters of way laid down under this Company's PATENTS can be maintained for the same cost as one mile of way of the ordinary construction.

For New Lines the Company recommend their PATENT WROUGHT IRON PERMANENT WAY, which has been most successfully and extensively adopted on several Lines in England, and is also being introduced upon upwards of Three Hundred Miles in France at the present time. The system involves no increase in the original cost of construction, and secures SIMPLICITY and SAFETY combined with great ECONOMY in the cost of renewal and maintenance.

The Company possess also important patented improvements in the various descriptions of CAST IRON SLEEPERS, which have been already successfully introduced on several Hundred Miles of Railway, both at home and abroad, and most satisfactory reports of their economy and efficiency have been received.

The following is a list of the various Lines on which one or other (and in some instances several) of the PERMANENT WAY COMPANY'S PATENTS have been already adopted:—

Belfast and Ulster	Manchester, Sheffield, and Lincolnshire
Bordeaux and Cette	Midland
Dublin and Belfast	Moncada, Spain
Eastern Counties	Merseyshire
East-Indian	Midland Great Western, Ireland
Edinburgh and Glasgow	Newmarket
East Lancashire	Newport, Hereford, and Abergavenny
Egyptian	North and South Western Junction
Glasgow and South-Western	Northern Railway of France
Great Western	St. Germains and Versailles
Hereford, Ross, and Gloucester	South Wales
Hull and Holderness	Sydney and Goulburn, Australia
Lancashire and Yorkshire	Waterford and Limerick
London, Brighton, and South Coast, and Crystal Palace Line	West Cornwall
London and North-Western	York and North Midland
Londonderry and Coleraine	York, Newcastle, and Berwick.
Londonderry and Enniskillen	
Maryport and Carlisle	

Some of the most important Lines of Railway have found it to their interest to compound for the Income dues for all the PERMANENT WAY COMPANY'S PATENTS by one payment. This arrangement has the advantage of enabling them to use the Patents in a COMPLETE FORM, without paying a separate royalty on each, and includes the free use of any future improvements in the Patents belonging to the Company.

After a series of practical trials of the system upon the LONDON and NORTH WESTERN and MIDLAND RAILWAYS, these two Companies, with a view to the adoption of the best plans for SECURITY to PASSENGERS and ECONOMY in working, have arranged with the Permanent Way Company for the use of their Patents on upwards of a Thousand Miles of Railway.

Testimonials from the most eminent Engineers may be inspected at the Office of the Company, and every information as to the cost and best mode of proceeding be obtained by application to Mr. CHARLES MAY, Civil Engineer, the Manager of the Permanent Way Company; or to Mr. WILLIAM HOWDEN, the Secretary, No. 36, Great George-street, Westminster.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sculino, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.—Office, 8, Crescent-terrace, Millbank, Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOODS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

TO BUILDERS, MASONS, AND CONTRACTORS.

OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Earl-street, Holywell-street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney-pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

SERPENTINE MARBLE of choice quality ON SALE, in blocks and slabs, at moderate prices. THOMAS JACKSON, Commercial-road, Pimlico.

ITALIAN and GALWAY MARBLE QUARRIES: DEPOT, WHITEHALL WHARF, PARLIAMENT-STREET, WESTMINSTER. Mr. FRANKLIN invites the consumers of MARBLE, to issue t his large stock of ITALIAN and IRISH MARBLES, consisting of twenty different descriptions, in blocks and slabs. The following ships are daily expected from Leghorn:—*Swanhaute, Rhoda, Carolina, Cognette, Catherine*, with sixty-one blocks of Statuary, of large dimensions, suitable for Sculpture, Vein, &c. &c. Also *Galway Packet*, with 150 tons of BLACK BLOCKS and SLABS. The above will be sold at former prices, with the addition only of extra freights.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention, that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing-mills, Cambridge-heath Hackney. WM. HUSTLER, Proprietor.

TO MASONS, BUILDERS, AND OTHERS.

TO BE SOLD, without reserve, several handsome carved statuary CHIMNEY-PIECES, black and gold, and veined marble, with trusses; also bed-room chimney-pieces, of statuary, vein, and stone. Polished by steam-power.—Apply to No. 7, Ring-cross, Holloway-road, adjoining the Pied Bull.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove St Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Ped-estals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street, and Messrs. Braby's, Belvidere-road, where terms may be obtained.

BATH STONE.—HENRY STONE begs to inform Builders, Contractors, and Others, that he still continues to supply the best BOX HILL GROUND, and Lodge Stile COMBE DOWN STONE, on the most reasonable terms.

H. S. also begs to call particular attention to a Quarry he has lately opened on Hamptonfown, near Bath, where he has some beds of Soft White Stone, of a very superior quality, and adapted for either exterior or interior purposes.

Ashlar and Sawn Range Stone cut to order. Cargoes shipped and delivered to any part round the coast.

Residence, Widcombe, Bath.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scalleit Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stone-work for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-park-basin

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; boiled ditto; rubbed and boiled sills; Harehill and self-faced slab; rubbed York paving; pipes, pots, &c. all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge-wharf, City-road.—Establishe. 1821.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance, during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions which are, for all purposes, which will be sold on reasonable terms. Apply to A. BLACK, Sundridge park Farm Bromley, Kent.

TO BE SOLD, a Quantity of ELM TIMBER TREES, of large dimensions; can be delivered at the Great Northern or Eastern Counties Railway Station.—Apply to Mr. R. BIRD, Brampton, near Huntingdon

TO PIANOFORTE AND CABINET MAKERS.

ITALIAN WALNUT VENEERS (Knife cut), of choice figure, at the lowest prices, for cash, at E. SIMMS'S Timber-yard, Wilton road, Pimlico.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1853.

ORIENTAL GAS COMPANY.—TO GAS ENGINEERS.—The Directors of the Oriental Gas Company REQUIRE the SERVICES of a GENTLEMAN of energy, ability, and practical experience. He must be competent to erect gasworks, to undertake the management of all constructions, alterations, and repairs, and generally to superintend the business of the Company in Calcutta, under a committee.—Applications, stating full particulars of former engagements, testimonials, and references, and the amount of salary required, to be addressed to the Board of Directors, at the Offices of the Company, 127, Leadenhall-street.

FOR WATERING GARDENS, DISTRIBUTING LIQUID MANURE, &c.—JAMES LYNE HANCOCK'S VULCANIZED INDIA RUBBER TUBING is now manufactured especially for the above purposes, and is of greater flexibility than any other description of hose or tubing. It is also manufactured to resist great pressure, suitable for attaching to the main of waterworks or to tanks or water-butts, of high elevations. WATERING HOSE fitted up with brass joints, branches, stop-cocks, roses, and jets complete. Vulcanized India-rubber suction-pipes for pumps, any length or size, to order; HOSE for brewers' use, fire-engines, &c. VULCANIZED INDIA-RUBBER WASHERS for STEAM and WATER JOINTS, and VULCANIZED RUBBER in SHEETS of ANY SIZE and THICKNESS. Solid vulcanized India-rubber tubing and cord for the joints of glass doors, sashes, frames, &c. Prices and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between 1 to 3½ p.m.), or to Mr. H. B. BARLOW, Office for Patents, Dunce-place, Exchange, Manchester.

HOUSE DECORATIONS.—J. MAC LACHLAN, Painter and Decorative Artist, 33, St. James's-street, and at Clapham-common, informs Architects, Surveyors, and others, that he is practically acquainted with his trade in all its details, and respectfully requests a trial from those who may wish to have their work nicely executed at a very moderate charge, and punctual to time. J. Mac L. will be glad to make designs for the decoration of rooms, or public buildings, in any part of the kingdom, with estimates. — Tenders for general repairs.

TO MASONS, BUILDERS, AND CONTRACTORS.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.

London, 8, John street, Adelphi.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

(DEPOTS,)

Great Western Railway Station....	PADDINGTON
Great Western Railway Station.....	BRISTOL.
Hope-street, Mount-pleasant	LIVERPOOL.
Castle-fields	MANCHESTER.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's-court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

ABERDEEN and PETERHEAD POLISHED GRANITE.—Chimney-pieces, Monuments, Columns, Pedestals, Vases, Monumental Urns, &c. executed on the shortest notice, and at the lowest possible prices, on application to JAMES WRIGHT, Manufacturer, 119, John-street, Aberdeen; or A. and F. MANUELLE, Granite Merchants, 12, Trinity-square, Tower-hill, London.

CAEN WHARF, ROTHERHITHE.—GATES and GEORGE beg to invite the attention of Builders, Pavors, and Stone Merchants, to their stock of YORKSHIRE PAVING, and general assortment of stone goods, which are offered at the current prices, and on their usual terms of credit.

ANCASTER STONE, of superior free working quality. Messrs. LANGWITH and THOMPSON beg to inform builders, contractors, and consumers of the above article in general, that their quarry is now fitted up complete with machinery to supply any quantity at the shortest notice.

Price and every information may be obtained on application at the Office, Elmer street, Grantham.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.

TWO superior descriptions of GRAVEL, one for Concrete and the other for Road-making, may be had upon application at the office of the Park Estate, Plumstead, near the Royal Ar enal, Woolwich. Price 2s. 6d. per yard. Delivered into barges alongside Woolwich.

SCAGLIOLA done on an improved principle. I refer to the Gothic Arch done by D. DOLAN, which gained the only Prize Medal awarded in the British department for the manufacture of the above work. Specimens to be seen at 193, Drury-lane, two doors from Holborn, with a choice collection of ornaments for building purposes, trusses for shop-fronts, always ready. Superior royal coats of arms for half the original cost.

MARBLE and STONE MACHINES.—Four Frames, Circular Rubbing Table, Polishing ditto, Shafting, &c. all nearly new, TO BE SOLD at a very low price. Can be seen or particulars had on application to J. G. W. WILLOWS, 2, Dock-street, Hull.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road Pimlico Basin.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash.

4-inch Yellow, 17s. per square.		4-inch White, 16s. per square.	
5-inch	" 18s.	"	5-inch " 17s. "
1-inch	" 22s.	"	1-inch " 21s. "

Dantzic Timber, 80s. per load.

Mouldings by machinery in very great variety.

ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 4a, and 56, James street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

By Her Majesty's Royal Letters Patent.

VENEERS CUT (by Knife only) by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is guaranteed upon the ordinary method of cutting veneers.—For particulars of prices, and specimens of work done by the machine, apply to J. CLACK, Sole Patentee, Veneer-cutting Works, 44, Robert-street, Hadson, adjoining the King's road Saw-mills.

TIMBER for SALE.—A quantity of winter-felled OAK, of various dimensions; also a number of Oak Ash, Chestnut, and Birch quarters, well adapted for many purposes,

NEW TALE BY MR. CHARLES DICKENS.

On the 29th instant will be published, price Eleven pence,

PART XLIX. OF "HOUSEHOLD WORDS," containing Five Weekly Portions of

HARD TIMES.

BY CHARLES DICKENS.

OFFICE, 16, WELLINGTON-STREET NORTH, STRAND; and Sold by all Booksellers and Newsvenders.

On 30th April will be published, price 3s.

THE ENGLISH CYCLOPÆDIA, Part XII. extending in the NATURAL HISTORY DIVISION from the Insecta to Mammalia, and in the GEOGRAPHICAL Division from Cumana to Indian Archipelago; with Charts of Nautical Surveys, Coasts, Cochin China, Colonies, Climates, Commerce, Constantinople, Corea, Cuba, Cumana, Congo, Dominica, Connecticut

The Builder.

SATURDAY, APRIL 22, 1854.

DR. BRAUN, the learned secretary of the Archæological Institute of Rome, has again given a short course of lectures in English and German to the visitors of the Eternal City, and our readers may like to hear something about them. On this occasion the English lectures were limited to three, which were divided as follows:—1st. The Roman Forum; 2nd. The Fora of the Emperors; 3rd. The Colosseum. Each lecture was illustrated by plans, diagrams, or models. Respecting the Roman Forum, Dr. Braun observed that its boundaries, long a subject of dispute, have at length been determined by the discovery of the Sacra Via in 1834. It occupies a space at the foot of the Capitol, corresponding exactly to that of Piazza Colonna, and about 200 paces in length. The rostrum or tribune, whence the Roman orators harangued the people, formed the central point. Immediately behind are the remains of the Temple of Concord, at the back of which was the senaculum, or senate-house, where that body held its permanent sittings, and where Cicero delivered his orations against Catiline. Close to the rostrum we find the basement of a column, supposed to be the Umbilica Romæ, the centre of the city and of the world: a corresponding one is the Milliarium Aureum, or general milestone, mentioned by ancient writers as being at the foot of the Temple of Saturn, which we find in this very place still presiding over the Forum from its lofty terrace. In this edifice, Publicola, the colleague of the first consul Brutus, placed the public treasure. Here, too, was the seat of the quæstorship; and on the occasion of the triumphal processions, as soon as the train arrived at this spot, it was stopped, and the triumphator was compelled to declare upon oath that he had exactly stated the number of captives and treasure taken from the enemy. At the same moment the fatal sign was given to strangle those confined in the Mamertine prison, near the Temple of Concord.

This prison is older than Rome itself, and is constructed in the mode observed in the most ancient buildings of Italy and Greece; the layers of stone, forming the vault, being placed laterally, and projecting one over the other till they gradually meet. It was called Tullianum, from its having contained from time immemorial a spring of water. The well now connected with sacred legends existed already in the time of Jugurtha, who at the moment of his execution complained of the cold bath bestowed upon him by the Romans. The Tabularium, or public record office, situated on the slope of the Capitoline Hill, is the most remarkable and conspicuous building in the neighbourhood of the Forum. The solid masses of masonry it presents from that side convey an idea of the vast scale of Etruscan constructions. It was dedicated to Vespasian, who restored it, as well as the Capitol, and collected in the Tabularium about 3,000 documents written on brass tables. Seventy styli were discovered in clearing out the staircase leading from this building down to the Forum, which are now preserved in the Capitoline Museum.

The Basilica Julia, so called from its founder Julius Cæsar, was discovered a few years ago. It forms the boundary of the Forum on the side next the river, and was the most frequented court of law in Rome, called the centumviral bar. Quintilian states that four tribunals sat here at once. Pliny was employed in this basilica as a barrister, and describes his arriving in court before his turn came, whilst a great trial was going on at which ladies were present in the higher galleries.

In the second lecture Dr. Braun gave an account of that system of buildings constituting what are termed the Forums of the Emperors, and which were successively called into existence by the daily increasing wants of public business, the Roman Forum no longer affording sufficient space. Julius Cæsar laid out a forum in the neighbourhood, with a temple dedicated to Venus Genitrix, the founder of his family. Some inconsiderable remains are still existing in a courtyard in the Vicolo del Ghettarello. Augustus finding this still inadequate to meet the increasing demand, laid out another, with a temple in the centre dedicated to Mars the Avenger. Some beautiful columns and a portion of the walls of the cella are to be seen at the Arco dei Pantani in Via Bonella. This archway is pierced through the ancient wall of the Forum. The temple must have been of great beauty. It was adorned with porticos, and statues of the most famous generals of antiquity were erected near. The Salian Brotherhood, one of the oldest institutions of Rome, held its sittings here. The Emperor Claudius appeared uninvited at one of their banquets, attracted by the odour of the viands.

Vespasian founded another forum, called also the Temple of Peace, and Domitian a fourth, which was afterwards completed and consecrated to Minerva. The beautiful ruins of the portico called the Colonnaccia are still to be seen. On the frieze appears the goddess herself as patroness of female occupations: she is surrounded by young girls, whom she instructs in the arts of weaving, spinning, &c.

All these forums were, however, far surpassed by that of Trajan. The centre was occupied by a splendid basilica, and the space in front was widened out by semicircular buildings, one of which is still existing at the foot of the Quirinal, bearing the name of the Baths of Paula Amilias. We learn from coins that this basilica was richly adorned with sculptures. The roof was supported upon bronze beams, resting upon granite columns, and the outer walls were decorated with pillars of fine yellow marble. In the centre of the square stood an equestrian statue of the emperor, which so excited the admiration of the Persian prince Paramisdas that he expressed the desire to possess such a horse, when he was admonished by one of his courtiers first to procure himself such a stable.

In the third lecture, on the Colosseum, Dr. Braun observed upon the difference in the construction of Greek and Roman amphitheatres. In the former, the seats are supported by the sloping declivity of a hill. In the latter this mode of arrangement would scarcely have been admissible, even had the locality favoured it as a necessary condition in the Roman amphitheatres was an exterior wall, pierced in every direction, to facilitate the entrance and exit of so many thousand spectators without confusion. This want suggested to the practical sense of the Roman architects, the beautiful system of open galleries, so conspicuous in the theatre of Marcellus. To the Roman people games were, next to bread, the greatest necessity of life, and this produced an architectural structure combining the advantages of a theatre with those of a circus, for the purpose of assembling an enormous crowd immediately round those blood-stained stages which Cicero calls the schools of death. Augustus is said to have conceived the design of constructing an amphitheatre of solid workmanship in the centre of the city, but it was reserved for the enterprising spirit of Vespasian to carry into execution so gigantic an idea. He selected as the site, the lake, around which were arranged the fanciful creations called the Golden House of Nero, as is precisely stated by Martial. The elliptical form was chosen as affording the greatest possible space for the accommodation of spectators. The few elements of which this great edifice is composed, undergo by the reaction of this peculiar shape an amazing variety of changes. There are, in fact, not two pillars of the same geometrical form, all being subject to the same law of centrifugal metamorphosis, varying gradually from the square to the diagonal direction of the rhomboid. The construction thus becomes so complicated, that it requires perpetual scientific survey.

We discover in the Colosseum three principal elements, each requiring separate analysis. 1st. The arena, or stage, where the games were performed. 2ndly. The different terraces of seats. 3rdly. The systems of staircases and corridors on which these seats rested, and by means of which they became accessible. The whole machinery, connected with the arena, for the introduction and removal of the gladiators and wild beasts, was subterranean, thus enabling thousands of attendants to be continually at hand, without impeding the progress of the games. The animals were raised up in wooden cages, which opened spontaneously, and then sank again into the earth. On other occasions, the whole arena was converted into a lake, the water being supplied by the reservoir connected with the baths of Titus, or by the Neronian aqueduct, some arches of which are still remaining between the Cælian and Palatine hills. To raise the tiers of seats to the height required, a double row of buttresses was constructed, which supported their immense weight. The seats, or gradinate, were all of white marble. The lower terrace was allotted to the emperor and persons of high rank, among whom the vestal virgins seem to have had a place. Each girdle was surrounded by a high wall, in which the doors, leading from the staircases, were let in. The whole was crowned by a lofty portico of woodwork. The wall behind the loggia of the emperor was said to be decorated by a mosaic ground, resplendent with gold. The openings giving entrance to the seats, were called Vomitoria, from their pouring out, as it were, the masses of spectators. Their number was considerable, in order to facilitate the dispersion of so great a crowd as assembled to view the games.

The outside walls are the support of the weight of the whole edifice, since all the inner terraces fall back upon them. To give stability to the structure, each successive girdle of arcades inclines somewhat inwards, producing a line sloping from the perpendicular, which gives to the whole a greater degree of firmness and solidity. When we consider the enormous bulk of the Colosseum, the time employed for the building appears incredibly short. It was finished in a period of little more than ten years.

The Colosseum was much injured by earthquakes; but in 1471 began the first serious devastation—Paul II. setting the example to succeeding ages in the work of destruction. The Palazzo di Venezia was built with the blocks of travertine plundered from it; and, henceforward it was looked upon as a stone quarry, palaces and churches being remorselessly constructed from its venerable ruins. Even as late as 1705 stones were taken thence to build a harbour.

After the lecture, access was given to all who had been present to see the model made by Dr. Braun for the Crystal Palace. It is executed in a material resembling ivory in whiteness and polish. All the measurements are of the utmost exactness, on the scale of 1 to 100, all the details being wrought with the hand, and not moulded. This model represents the Colosseum as restored; and, even on this scale, conveys an astonishing idea of the magnificence of that unrivalled structure.

For greater convenience in the examination of its component parts, it is divided into four;

so that the internal structure is more readily understood. Each of these four portions consists of nearly 10,000 separate pieces, in which whole systems of stairs are reckoned only as one. Of the 360 open arches forming the circuit of the Colosseum, 180 are filled with statues, the proportions of which are founded on the broken fragments still lying there. The portico above is furnished with metal poles for fixing the velarium, or awning, which covered in the whole Colosseum during the games, so as to shelter the spectators from sun and rain.

We understand that a model of the Pantheon is in progress. Dr. Braun's work on "The Ruins and Museums of Rome" is already published. The English translation will appear in the course of a few months.

A LITTLE TALK.

OUR readers have doubtless heard with satisfaction that Burlington House, in Piccadilly, will be secured to the nation. The Chief Commissioner of Woods and Forests has become the purchaser, at the sum, as we understand, of 140,000*l.* Some say that it has been bought for the purposes of a national gallery, and others as a meeting-place for the learned societies, but its appropriation is as yet doubtful. The misfortune is, that however good the purpose may be, government officials and commissioners always move so slowly that the present generation are not quite certain of benefiting by the acquisition.

What has become of the land at Kensington purchased by the Royal Commissioners of '51? And where have gone the noble intentions with which it was bought? One of these days, when the continuation of Farringdon-street has been opened, the Nelson monument finished, smoke abolished, London drained, and the Thames embanked, we shall hear that the appropriation of the land at Kensington is about to be considered. As Eliot Warburton observes,—"Comfort is always on the road, though ofttimes it travels wearily and slow,"—especially if it start from a Government office. We observe, by the way, that at the entrance to the Commissioners' land next the Fulham-road, the "Oratorians," who purchased the plot of ground adjoining Brompton Church, have given up a portion of it in front (for a consideration,—some say 2,000*l.*) to improve the approaches. The enclosure wall is being erected behind the fence, and serves to show what a noble road we shall have here. The Bell and Horns public-house ought nevertheless to be removed: it stands greatly in the way, and renders the turn of the Fulham-road there always dangerous. The enclosures in front of Brompton-row, reaching from Brompton-square to Knightsbridge, should be improved. They offer facilities for rendering the road beautiful. Returning for an instant to the Oratorians, the buildings erected for them, including a very large residence * and a temporary chapel 181 ft. long, 40 ft. wide, and 27 ft. to the ridge of the roof, are certainly at present no ornament to the neighbourhood: indeed, "not to put too fine a point on it"—quite the reverse. Doubtless, however, the skill of Mr. Scoles will ultimately evoke something like order and beauty out of the at present odd-looking conglomeration.

Beauty! how we all love and reverence it when it is *made evident to us!* What a large debt we owe to its producers! "It is a righteous instinct which bids us welcome and honour beauty, wherever it may be found, as something of real worth—divine, heavenly, ay, though we know not how, in a most deep sense eternal."†

Are architects producers of beauty? They ought to be so, and if so should be honoured. The extent to which they are "honoured" in *Ireland* has just been shown in a very curious way, if we may believe our advancing contemporary, *The Civil Service Gazette;* and we have no reason to doubt it. Mr. Thomas M. Irvine, the son of a respectable citizen of Dublin, was lately nominated by the Treasury to a lieutenancy in the Revenue Police Force. He received a notice of the qualifications necessary for him to establish before his appointment could be confirmed. Several high accomplishments, such as being acquainted with the four first rules of arithmetic, were duly set forth in this list, and he was required to produce certificates from at least two gentlemen of well-known respectability that his position in society was that of a gentleman, that he had not been in any employment derogatory to a gentleman, and that his character was exemplary, before Colonel Maclachlan, Chief Inspector of Revenue Police, Dublin. He flattered himself that his qualifications were completely substantiated, but Col. Maclachlan found by the young man's papers that he had been apprenticed to an architect for three years, and had served his apprenticeship with credit and ability; and for this sole and truly singular reason, that Mr. Irvine was an architect by profession, the Chief Inspector of Revenue Police decided that he was not a gentleman worthy to become a lieutenant in his distinguished corps!"

If the case be correctly stated, well may the *Advocate* wonder how "Colonel Maclachlan, or any other individual, arrived at the years popularly supposed to accompany common sense and discretion, could have bogged himself in so ignorant, foolish, but, at the same time, unpardonable a mistake." We should like to hear this revenue policeman's definition of a gentleman. The Institute of Irish Architects ought to inquire into the correctness of the statement.

A propos of works striving after the beautiful, we may mention that Mr. Bell's selected model for the Wellington Memorial, to be erected by the Corporation of London in Guildhall, represents the Duke between Peace and War, a male and female figure. The pedestal is inscribed "Duty," supported by "Wisdom" and "Honour," and on the subplinth is a bas-relief of the Field of Waterloo, intended to be of considerable size, and containing portraits of Wellington, Napoleon, Ney, Anglesea, Hardinge, and others. The composition is distinguished by a noble simplicity, and promises a fine work.

Some beautiful marbles and bronzes were sold in Paris the other day, in M. Visconti's Collection of Works of Art, comprising, too, enamels, pictures, and books. The pottery fetched large prices. For example, a dish by Bernard Palissy, 50*l.*; an ewer, by Jean Courtois, 120*l.*; two dishes, by Pierre Courtois, 123*l.*; and an oval dish, by Jean Limosin, 187*l.* The sale realised in the whole, 3,360*l.*

Speaking of sales, a friend in the State Paper-office, directs our attention to the circumstance that "Old Ranelagh House, near Chelsea College, one of the last remnants of the last century, is to be sold by Mr. George Haynes, on the 24th, for building materials, and demolished." Ranelagh House was built at the end of the seventeenth century, by Jones, Viscount Ranelagh. The well-known place of entertainment bearing the same name, so much frequented at one time, that as Walpole writes, "Going there t'other night, in a string of coaches, we had a stop of six-and-thirty minutes,," was formed on the site of the gardens of this villa, about 1742. The "Handbook for London" says the house was standing when Lysons published his "Environs," but has since been taken down. If our informant be correct, however, some portions of it still remain. The clearance is to be made to form the new road from Sloane-street to the Suspension-bridge and Battersea-park.

MILITARY CAMP, OR TRAINING GROUND.—The authorities at the War-office, having obtained a grant from Parliament of 100,000*l.* for land for occupation by the army, have bought about 4,000 acres of land at Aldershot, Farnham, and Ash, in Hampshire and Surrey, about 35 miles from London. The land, according to the *Daily News*, is admirably adapted for the purpose. The nearest railway stations from London will be the South Eastern and the South-Western, both at Ash, and within a mile of the ground. It is intended to encamp the militia on it shortly. Parties are already building and speculating on the improved value of the land in the locality.

NOTES ON THE HISTORY AND CONDITION OF THE BUILDING TRADES.

PLASTERERS.*

THE trade of plasterer, as we know it, took its rise with the introduction of plaster of Paris, and of the method of casting plaster ornaments from moulds of wax. It is capable of being distinguished into two leading divisions—interior work and exterior work. To each of these divisions we shall now direct the reader's attention.

The first thing a plasterer does on entering a building is to nail the laths to the joists and quarters.† When he has thus obtained the groundwork for his plaster ceilings and walls he proceeds to lay on the first coat. On a surface of lath this is called "rendering." The second coat is called "floating," from the operation being conducted by means of long wooden straight edges. The third coat is the "finishing or setting." For stucco work this last coat consists of chalk-lime and sand in the proportions of two of sand and one of lime; and it is wrought to an even surface with the float, then finished with the trowel. The lime used for this purpose is chiefly derived from the limestone formation of Purfleet in Essex, and is to be distinguished from the strong Dorking or stone lime used for the mortar of the bricklayer. It is likewise not to be confused with the plaster of Paris used for finishing the ceilings and the cornices. All the running mouldings of cornices are composed partly of lime and partly of plaster in the proportion, generally speaking, of two to one. But all the enrichments and cast ornaments are composed of pure plaster alone.

Respecting the distinction between lime and plaster much popular misapprehension exists. What is commonly called lime consists of a combination of the oxide of calcium with carbonic acid ($Ca\,O,\,CO_2$) or carbonate of lime; what is called plaster consists of a combination of the same oxide with *sulphuric acid* ($Ca\,O,\,H\,SO_4$) or sulphate of lime. A more popular distinction would be that of *chalk* and *gypsum*.

The sulphate of lime is known under the commercial name of gypsum. It is to be found widely distributed over the tertiary formations of England, France, in the Alps, and the lower Pyrenees. The stone which yields the best plaster without exception is that derived from the great Paris basin. The gypsum from the best quarries is nearly as hard as the indurated limestones; and when heated until its water of crystallization is driven off, it becomes pulverulent like flour. In this state, if fresh water be presented to it, it recombines with a normal quantity and reassumes the form of a hydrate. It is this property which has led to its use in buildings. When the plaster is burnt it becomes anhydrous, and when worked up again the precise quantity of water it had lost is restored to it. The degree of hardness in the plaster generally depends upon that of the stone, for it is well known that the hardest stones produce the hardest plasters. In England, where plaster is expensive, its use we have seen is restricted to the finer parts of the decoration—the cornices, mouldings, and cast ornaments; but in France it is largely used for rendering walls, both internally and externally. It is, however, unlike the Roman cement or the hydraulic limes, utterly incapable of resisting the action of water. Roman cement was discovered in the year 1796, by Mr. Parker, of London, who obtained a patent for manufacturing it from the septaria nodules of the London clay formation found in the Isle of Sheppy. His process consisted in calcining the stone, previously broken into small pieces, to a point equal to the commencement of vitrification and then reducing it to powder by some mechanical means. Subsequently, Mr. Frost discovered that a cement of the same nature could be produced from the septaria of Harwich, on the coast of Essex. Mr. Atkinson introduced another from the nodules of the argillaceous limestones of the secondary formation of Yorkshire. The whole strength and value of these cements consist in the proportion of clay which they contain in combination with the carbonate of lime. And it is this

* Some idea of the scale on which the building is executed may be gathered from the following dimensions:—The Oratory, 72 feet long, 40 wide, 27 high; the library, 72 long, 30 wide, 23 high; the refectory, 50 long, 25 wide, 25 high; the corridors of the house, 16 long, 9 wide, 14 high.

† Kingsley.

* See p. 195, *ante*.

† In the north of England and in Scotland this constitutes a separate branch of the trade. See for some notes on the Edinburgh lathsplitters, *Builder*, vol. XI.

wh also gives them the property of resisting thction of water.

aster of Paris is commonly used in two w—one in its natural state, and the other in peculiar chemical condition, wherein, being deved of its water of crystallisation, it becos harder and more indurated, and is then kn under the form of Parian cement, and unr various other denominations.

ere are two species of stuccoes, those made fro lime and those made from plaster. When mid with different metallic oxides they constite the celebrated stucco work of the Roman antalian architects. But it will be seen from its mited use in this country (it being almost exsively confined to Scagliola and artificial male decorations), how little right we have to apr the term *stucco* to any of our modes of plaering in lime or in gypsum.*

e shall now give the reader a concise acunt of the manner in which the exterior plaering is conducted; which means, in other wos, the manner in which our London fronts areompoed.

mpo is the contraction, or rather the cant nae, for the mixture with sand and Roman cemt, Portland cement, Bailey's cement, Jok's cement, Brown's cement, Robinson's cemt,—all of which are used to plaster the fros of houses. Of the composition we had bett say nothing. This compo is rather an omvorous substance with London builders. It may be used for anything, anywhere. To plaer outside walls and inside walls, to plaster dry alls or damp walls, for running cornices, for asting ornaments of every description.

W shall suppose our plasterer has a front to comp in a fashionable street. It is very probably n the Italian style. It has a large projectin cornice, circular pediments to the windows, and rockwork projections all over the corner. This is quite a simple job; but we are fond o simple illustrations, and we need not become too mysterious. In plastering the cement ver the front there is no great difficulty. Grounds or narrow stripes of cement are formed in the usual manner, and the wall is floated and finished. It is then carefully scored with a little iron instrument into the irregular rectangles which are supposed to imitate stonework. But with respect to the cornices, there is a little science to be practised. The cornice of the entablature projects 18 inches; but ordinary brickwork alone cannot be made to project 18 inches; therefore pieces of York stone are necessary to be built into the wall as a support for this brickwork, which underlays this cornice. Upon this groundwork a cornice of cement is run with a mould. Such is the method of constructing the cornice of the entablature. But some of our readers will smile when we come to the pediments of the windows. In this case there is very frequently no projecting bricks, no projecting York stone. How, then, is the compo to be held—how can it be made to stick? Here is one way. Over the lintel of the window are stuck into the fronts of the brick a number of iron spikes, forming the outline of the pediment. Round these spikes is then interlaced a quantity of tarred rope-yarn, and the cement is plastered upon this singular projection, and so the circular pediment in the Italian style is finished.

We shall now throw together a few notes upon the present condition of plasterers.

We may remark before proceeding further, that the plasterers some years ago—we are far from asserting that such is the case now—were distinguished among all contemporary tradesmen for their dissipated habits. They were, perhaps, the least to be depended upon in any emergency, or in the height of a busy season; and as a corresponding result, they were uniformly the first to cry aloud when the busy season was past, and the short time came round.

Although this body of men have recently made strides in the march of improvement, it may be worth while to look for a moment at the causes which, in the opinion of the writer, chiefly led to their dissipation, and to their irregularity of conduct.

During the last century the journeyman builder was in practice an adept at the different branches of his business, which a knowledge of the division of labour has since led men to separate. Thus, the journeyman carpenter, who is still the most ubiquitous tradesman connected with building, was likewise a journeyman plasterer, and not unfrequently a journeyman plumber and glazier. It is, we believe, not uncommon in country towns in the present day to find some grey-haired mechanic who, to the astonishment of his youthful hearers, can boast of his great acquirements in every department of trade in connection with building. He can, in all probability, point to a house over the way which he and his mate finished between them; and finished in such a manner as may well bear comparison with the gingerbread style of construction, now, alas! so common in all great cities and townships of the kingdom. If he speaks to a modern carpenter, the latter will, no doubt, perceive defects in the panellings, which he could have improved; if to a plumber, the plumber will also detect the coarse finish in the overcasting of his joints; and if to a plasterer, the plasterer will put his eye on a level with the wall line, and detect a three-cornered protuberance in the centre of the plaster. But neither of these artizans, with all his skill in his respective department, could do what the old man and his mate did between them when they were young: that is, build a house.

Whether the division of labour into these separate branches—which, if accompanied with unity of design, unquestionably has improved the style of construction, and increased the produce to a marvellous extent—be altogether an unmixed good as far as regards the working man, we have often had serious grounds for calling in question. We do not say that it is practicable or desirable even to rear men up who should be able to build entire houses, make their own beds, stuff their own chairs, solder their own teapots, build up their fire-grates, and forge their fire-irons. Such men we have no doubt may exist, just as we know that blacksmiths are upon this earth who preach universal peace, and who speak in ten different languages; and that there are literary men who profess to write with equal power and fluency upon the diversified subjects of science and art, literature and philosophy, logic and rhetoric, *et hoc genus omne!*

Indeed, when it follows, as it generally does, that the tradesman who is proficient in one branch of trade receives more wages than the tradesman who is only imperfectly acquainted with an infinite number of branches, the philosophy of the division of labour so far accords with the theory of human progress, that it comes a welcome guest to the minds of all who cherish that theory, and who desire its extension. But when, on the other hand, it follows that the division of labour has a tendency to reduce wages, and to produce irregularity in the distribution of that labour, we must on the same grounds adopt the opinion that the division of labour has overstepped its legitimate boundary; and that it has been the means of producing evil, because it has been carried too far.

These reasons at least seem to arise from the consideration of the social condition of the plasterer. When that artizan stood in connection with some other branch of the trade, he could always depend upon his full wages. But now, from reasons upon which we need not dilate, but which chiefly arise from his short time in the winter season, he cannot depend upon more than two-thirds of his full wages. We have here a few averages of plasterers' wages, selected by one of the most intelligent of their number as a fair example of what good artizans may be prepared to expect for their week's work, taking the average at one year, and the wages nominally at 30s. per week:—

No.	Period.	Rate.	Sum Received.	Average per week.
A.	56 weeks.	At 30s.	£73 3 9	£1 6 1¼
B.	56 ,,	,,	68 13 9	1 4 7
C.	53 ,,	,,	42 19 0	0 16 6¼
D.	52 ,,	,,	47 13 6	0 18 4
E.	52 ,,	,,	48 16 0	0 18 9¼

Now there are here to be found two important considerations, which this table gives us. In the first place, a skilled artizan, who receives nominally, and is supposed to be worth, 30s. per week, receives actually upon the average a sum as low as 17s. and 18s. per week (C, D, and E). In the second place, where an artizan works during the height of a busy season fifteen and twenty hours overtime per week (A and B), his wages do not exceed on the whole year's average, in the highest case, 26s. per week. It would be a singular question, had we time to spare, to ascertain the equation calculus wherewith to represent the probability involved in this case. But it is, we think, quite palpable. And the reasons are precisely as we have stated them. The plasterer is overburdened with work at one season, and at another he is thrown out of work altogether.

This, then, may be the cause of the irregularity and dissipation attributed to plasterers. If you wish to depend on a man's services, it is the worst policy imaginable to leave him in an unsettled position. He has no heart to work. He does everything with a grudge. He has no time to improve his present condition, for his thoughts are occupied with the future. What signifies the beauty of this cornice, or the undercutting of that ornament to him; when he knows by the time it is properly hardened and in its place that he will be starving over a miserable fire upon half-pay? And such a reasoning leads other men to do this besides plasterers. What but this made the literary men of last century—who one day blazed in gold lace, and another day dined on 2d. in a cellar—so reckless and so dissipated? Finally, what gives rise to the rabble and *prolétariat* of London, but a sense of the insecurity of their employment as costermongers, as huxters, as poor watercress women, all entirely frozen out? But we must hasten on. The plasterers have not been distinguished by any protracted strike. They were indeed mixed up with the document strike in 1823, along with the masons. And the only important movement since that period was made last year, in company with the carpenters and bricklayers, for an advance of wages, which they obtained. Previous to that the wages were 5s. per day; these are now 5s. 6d. per day; always, let it be understood, subject to the deduction arising from loss of work in bad weather, &c. The higher classes of tradesmen, however, receive more wages than this. Modellers, who work up the compo ornaments of fronts and staircases, and the plaster for ornamental ceilings and cornices, receive from two guineas to five guineas per week. Such men are frequently possessed of fine artistic tastes. Many of them are employed by sculptors: many of them rise to be sculptors themselves. We may state here, that there are between 5,000 and 6,000 plasterers in London.

There is a trades' union in a very flourishing condition connected with this business. The committee meet every Tuesday evening at the Adam and Eve, St. Pancras-road. The object of this union is both political and economical. For cases of accident and illness a subscription is made of sixpence a week: and for the purpose of defraying the current expenses of the society a further subscription is raised of twopence per week. Its principal object, however, is that of guarding against the introduction of "hawk-boys"* and bricklayers' labourers into the trade, which, in times when business is brisk, is a thing the plastering trade is particularly subject to. The fact is, there is no apprenticeship served to the trade. Men come seeking work: if in winter they will not get it, whatever their skill may be; in summer, they will be employed although they only know how to mix lime.

Plasterers are a very healthy set of men. We do not indeed know of a trade connected with building where the operatives, if sober and steady in their habits, are so likely to reach to the extreme limits of old age. It is well known among themselves that they have a great number of old men belonging to them; only, as we were dolorously informed in course of our inquiries, "Most of the old plasterers die in the work'us!" We cannot vouch for the truth of this statement; but we can at least account for the beneficial influences of their trade. In the

* See the treatise on "Lime and Cements." by Geo. R. Burnell, C.E. London: Weale.

* The square pallet the plasterers hold in their hand is termed a "hawk." Every journeyman has a boy or a labourer who attends to the mixing of the lime and to supplying the "hawk."

first place the muscular exercise is capital: neither too protracted nor too severe. We could scarcely invent a better game of gymnastics than the rendering of a wall. In the second place, the lime has a strong sanitive influence; it sometimes affects the eyes, but its action on the blood and on the bones is so singularly beneficial, that plasterers, even if ill fed and worse clothed, are often strong and healthy men.

A SCALE OF SQUARE ROOTS.

IN the progress of the formation of scales for obtaining the lines of the intersections of solids and the curves of numerous projections from them, I have constructed a scale of "square roots" which points to a host of similar character for proportioning varying divisions of finite, and, as far as practicable, comprehensively by infinite laws, varying divisions of infinite right lines.

Considering that these scales coincide with some and indicate how others of the right-lined proportions of the "Parthenon" may have been obtained, I have prepared the accompanying as examples; but this field is far too wide for any single individual fully to investigate it, and I have vastly more before me in reference to curves than, unaided, I can ever accomplish, or even indeed leave adequate traces of the numerous discoveries I have made of facts,—links of great importance to complete the chain of the septenary system, &c. It is now more than thirty years since I first invited attention to what I had then ascertained,—the great utility of which is made more manifest and extended by subsequent and recent advances.

Mr. Pennethorne, very ably, in apamphlet, in 1844, urges the necessity of public support for "fully restoring the long-lost scientific principles which guided the Grecian artists." With much of what Mr. Pennethorne has stated I concur; but I will only now advert to two points, respecting which, with more information, he would, I think, alter some of his opinions.

The first is, I would say, that it was *not* by "*elaborate calculations* of the Greek architects in the preparations of their design," that they produced and have left on record in marble so much truth and beauty.

The second is, that the varying curves they applied in art were *not* all formed by *combinations* of plane conic sections.

Mr. Hay says, that "I cannot help demurring to the conclusions at which Mr. Penrose has arrived." "The proof," he further says, "can only be so in the absence of a knowledge of the composite ellipse."

It is more than thirty years since I *composed* forms with the ellipse, but that practice I abandoned immediately after, when I had discovered that apparently similar forms could, with greater accuracy and facility, be described by simple continuous motion.

I say "apparently," but to the instructed eye and mind distinguishably different, and it is, I conceive, only in the "absence" of "a knowledge" of these beautiful laws, their true results, and their intimate relation to, but deviation from, the ellipse and the other plainconic sections, as well as other curved sections, that Mr. Hay, MR. Pennethorne, and, indeed, Mr. Penrose, have fixed their minds so intently on curves with which they are familiar, as having been applied in ways, however near the approximation may be, for which they are clearly not so appropriate as others.

For example, a curve of *contrary flexure* cannot be composed of lines which have no point of infinite radius; and no such point can be found in any plain section of a cone.

Having made these remarks, I now invite attention to an example of a scale of square roots

The law by which the divisions in fig. 1 are determined, it should be noticed, and will appear by the explanation, produces both commensurable and incommensurable lengths, and that all these are obtained without calculation, with greater ease and as correctly as they can be by any mathematical process, however far extended; and then sets off with the most accurate scale of equal divisions, adjusted with a micrometer.

Let O P and O 1 be the sides of a square; then 1 P, its diagonal, is, in respect to the side of the square, *incommensurable*.

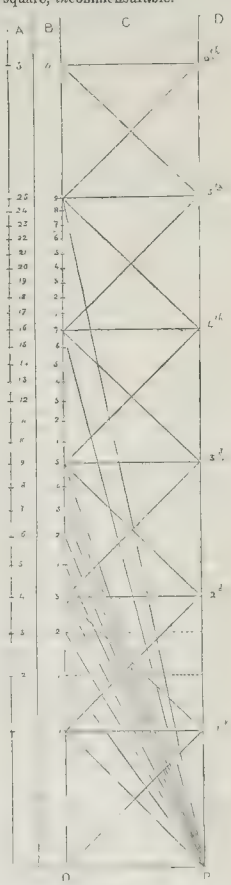

FIG. 1.

If the side of the square be 1, then the square of 1 or O 1 is 1; and $1^2 + 1^2 = 2$ = the square of the diagonal of the square 1 P.

This *first* diagonal 1 P, being set off from O to 2, gives the side for a parallelogram, which is the diagonal plane of a cube, of which the given square is a face.

The *second* diagonal 2 P, the diagonal of the diagonal plane of a cube, or the diagonal of a cube, is also incommensurable, both with the side of the given square, and also its diagonal, the first diagonal.

The diagonal of the cube, or 2 P, being set off from O to 3, gives the side for another parallelogram.

It will be thus seen that two divisions, 1 to 2 and 2 to 3 in this scale of proportions, are deduced from the cube; and these are to each other very closely, ·4142: ·3178, in the proportion of the bottom to the top diameter of the columns of the Parthenon, as measured by Mr. Penrose.*

Here these proportions might have terminated with the cube, had it not been perceived that this method of applying the diagonals as the sides of other parallelograms might be continued indefinitely.

Accordingly, when proceeding, it was soon found that the diagonal of the parallelogram in the proportion of the side of a face to the diagonal of a cube, is commensurable with the side of the square; and that this, or P 3, being set off from O to 4, gives the side of a parallelogram of a *double* square.

It will be evident by the diagram that by a simple process the side of the second square has been divided into three varying spaces, as, as shown by the dotted lines, these divide the square into three differently-proportioned parallelograms, two sides of each being each equal to the side of the square, the sides and diagonals of each of these parallelograms give other proportions.

Continue to make the diagonal of the double square, and of every additional parallelogram the side for another parallelogram; then it will follow the side of the *third* square, which will be divided into *five* varying spaces; the side of the fourth square into *seven*, the side of the fifth square into *nine*, the side of the sixth square into *eleven*; each additional square in this way added to the length of the parallelogram, having in its side two more varying dimensions in the scale than the preceding square. This peculiarity distinguishes this scale from all others.

Thus, by the diagram, O P = 1.

Then O 1 represents the square root of 1,
" O 2 " " of 2,
" O 3 " " of 3,

and so on to the length O′ 36, which represents the square root of 36, O P being = 1.

This scale may be continued to any practical extent. This diagram is divided into four columns. Under A are a series of numbers, the square root of any of which is the length of the scale from O′ to that number. Under B the figures enumerate the division in each square. Under C is a series of squares, or the plan of a series of adjoining cubes, and the number and direction of the plane sections in which the diagonal planes would cut each. The column under D is simply the numbers enumerating the cubes joined together. It may be again remarked that all these divisions have been obtained *without calculation*, and that the right angle and the square can be formed from any definite line given without any mathematical process. * * * * * *

The first diagonal which is commensurable with the side of the square (3 P, fig. 1) is the same as the hypothenuse of "the triangle of $\frac{1}{3}$," as named by Mr. Hay, which is indeed the half of an equilateral triangle, the "sometrical" angle.*

The diagonal of the square and each succeeding diagonal incommensurable with any preceding one will be followed in some steps of the scale by other diagonals with which it is commensurable.

There may be many squares (sides of squares may be bisected) commensurable with each other. The sides of squares may be the diagonals or half diagonals of other squares, and any other of the diagonals may become the sides of new squares, so that the units of measure may have been many, even in the same building, at the same time producing perfect harmony in the arrangements. JOSEPH JOPLING.

* From a scale of square roots, proportions for bottom and top diameters of other columns, and of metal as well as marble, may be selected.

* I will leave it to others to calculate all the proportions derivable from this scale applicable to the largest and smallest variations in every part of a design.

DINNER ON BEHALF OF THE PROVIDENT INSTITUTION OF BUILDERS' FOREMEN AND CLERKS OF WORKS.

AT the London Tavern, on Wednesday evening last, a numerous party of the friends and patrons of this thriving and commendable institution met at dinner, and passed an exceedingly pleasant evening, the general harmony increased by some very good music, and the whole graced by the presence of a truly *pretty* large assemblage of ladies, who, shame to the tyrannical customs of the day, were left entirely in the background, as a mere ornament in the *tout ensemble*, instead of occupying the most choice positions at the dinner-table itself.

Mr. George Baker, the governor of the institution, presided, and made an earnest appeal to the master builders, architects, engineers, and merchants present, on behalf of the institution, remarking that it was all the more entitled to a helping hand that its members aimed at helping themselves, and rendering their institution self-supporting. He gave a rapid review of its history from very small beginnings some twelve years since till now that it has steadily pro-

gresed into an important and useful institution, beloging to a most intelligent and most useful clasi of men, whose interests he, and those aroud him, were anxious to promote. The interests, indeed, were reciprocal: in numerous enggements it was quite impossible to go on without able foremen or clerks of works, and the employers were just as much indebted to them as theyvere to their employers. It was not enough for naster builders or architects to pay well thosewho used their healthful energies on their beha'; they ought to give every assistance to thir foremen and clerks of works in carrying out uch objects as they had in view in the establishment of an institution like this, for behof of those unable any longer to help themelves. Under these circumstances, he felt it hisduty and his inclination, as much as ever, though no longer himself in business, to make the srongest appeal possible to the philanthrop of those present; and he felt sure the result would show that they had not lost any of the interest they had taken in this Institution. The fact that it could not claim much generl interest on the part of the public, made its clam on those connected with the building tradesall the stronger.

Professor Cockerell also addressed the meeting, on his health being drunk, as representing the profession of architects. He had much pleasure, he said, in offering aid to those who were ading themselves. The Christian law of love towards our neighbour ought to convert masters and men into one vast bond of society, in links of loving kindness one with another. If wealth and prosperity had their advantages, they had also their duties; and he felt assured that this institution merited their consideration and support. He hoped it would be sustained with wisdom, otherwise it must fall. The public were generous, but they were also jealous, and liked to see a fair balance-sheet. They could not but feel, however, that an institution of this kind was founded upon right reason and right feeling.

Mr. Imray, as representing the profession of civil engineers, next spoke, in a like spirit; and the meeting was afterwards addressed by Mr. Henry Lee, Mr. Francis, Mr. William Lee, M.P. Mr. William Freeman, and other gentlemen.

The very handsome sum of 331*l.* 3s. was subscribed on the spot, including many sums of 10*l.* 10s. and 5*l.* 5s. among which we caught such names as Baker, Lee, Myers, McLean, Cockerell, Francis, Freeman, Jackson, &c. &c.

From the report ending January last, it appears that the sum total of funds, including fees, interest, and subscriptions, then amounted to 1,453*l.* There are four pensioners, three of them widows, who receive from 4s. to 6s. a week.

THE "OLD CHURCH" AT BRIGHTON.

THE restoration of the church of St. Nicholas, at Brighton, mentioned some time since, is completed, and the church has been re-opened. At the time when various towns were raising memorials to the Duke of Wellington, the Vicar of Brighton brought forward the proposition, "That the restoration and enlargement of the parish church, wherein his Grace the Duke of Wellington, at an early period of his life, was wont to worship, would be an appropriate and enduring monument of our gratitude, and veneration for his memory." And upon this subscriptions to the amount of 4,948*l.* were raised, and the works have been completed. Plans sent in some time before by Mr. Carpenter were adopted: the contractor was Mr. Bushby, of Littlehampton, whose tender, 2,985*l.* was the lowest of seven. Additional works have brought up the amount to 5,216*l.* and others, to the extent of 285*l.* are desired. The work was commenced on the 3rd of June, 1853.

The extreme length of the interior of the church (the chancel being 28 feet) is 112 feet; its width, 53 feet. The walls of the tower are 4 feet thick, and of the rest of the edifice, 2 feet 6 inches. The height of the nave is 31 feet, clear to the pitch. The side aisles have distinct roofs, but so slightly broken that they are apparently a continuation of the sloping roof of the nave.

The materials used in the work are bricks and flint, with Caen stone for facing; Bolney sand-stone for the columns, half of which are new; Delabole slates for the roofing, with three courses of Horsham stone for the edges.

The east window, of three lights, has been filled with stained glass, illustrating passages in the life of Our Saviour having reference to the avocations of a fisherman. The subject of the centre light is the miraculous draught of fishes; on one side of which is Our Saviour bidding Peter and Andrew come and be fishers of men, and on the other Peter calling to Our Saviour to save him as he is sinking on the water.

The actual memorial has the form of an Eleanor Cross, and is the work of Mr. Philip. The shape is hexagonal; the height, from the base to the summit, 18 feet 6 inches; the circumference, between 15 feet and 16 feet. The pedestal commences with a moulded base, rising from a tesselated pavement. On the base of the pedestal rests a plinth, covered with diaper work, surmounted by another moulding, on the broad champher of which is an inscription, in old English characters, in brass, which may be translated

IN MEMORY
OF THE GREAT DUKE OF WELLINGTON,
THIS SACRED BUILDING,
IN WHICH IN HIS YOUTH HE WORSHIPPED GOD,
IS RESTORED.

From the pedestal, and above the moulding with this inscription, rise four stories, with open tracery work, crocketed pinnacles, and an alabaster figure of St. George, sheathing his sword over the dragon, which lies slain at his feet, symbolical of the career of the great chieftain to whose memory the work is raised.*

DURATION OF STONE CARVINGS.

IN 1662, the monument to the memory of the botanist Tradescant was erected in Lambeth Churchyard: it is an altar tomb, and at each corner is cut out a large tree with its branches seeming to support the slab on the top: at one end is a hydra picking at a bare skull, supposed to be designed as an emblem of envy: on the other end are the arms of the family, the father and son of [whom] which are described as having

"Lived till they had travell'd art and nature through,
Of what is rare in land, in sea, in air."

On one side are ruins, Grecian pillars and capitals, an obelisk and pyramid, denoting the extent of their travels; on the opposite side a crocodile and various shells, expressive of their attention to the study of natural history.

In about a century time had nearly destroyed the carvings, which were restored in 1773, at the expense of the parish. In 1852, it was again necessary to re-carve the whole, which was again done at the expense of the parish. Sir Hans Sloane's monument, though of marble, is now, after less than a century, much destroyed, the inscription almost obliterated, and the foliage a jumble of knobs. Time has also so dealt with Westminster and Blackfriars bridges. How long may the carvings of the Houses of Parliament endure? Can precaution be taken to preserve them? would not linseed-oil be a fit application? Man forbid painting! although some of the carvings inside have been painted and also gilded, and the great palace of Buckingham has secured a great legacy to the painters.

T.

COMPETITION PREMIUMS.

THE excessive paltriness of the sums now frequently offered by committees for the best design sent in to them, even if it does not accuse them of stinginess and illiberality, throws some degree of discredit upon the profession itself. Those belonging to it must surely be in an exceedingly necessitous condition if they can be tempted to prepare designs for the mere *chance* of obtaining what, if they were certain of getting, would be a very miserable pittance.

By an advertisement in the *Builder* of late date, I see 10*l.* offered for a design together with specification and estimate included! Unless then there be some typographical error in the figures, architecture is, as a profession, made to cut a very sorry figure indeed. For that similar offers are responded to cannot be doubted, because else they would not continue to be made. There is besides a very shabby artifice now sometimes resorted to by committees, namely, that of nominally offering two premiums when they intend to bestow only one, the first and larger being deducted from "commission." To such pass, in fact, has architectural competition now come, that the profession should bestir themselves earnestly as a body to abate at least those evils in it which they cannot perhaps wholly correct. No doubt it would be a work of difficulty; therefore the effort to produce reform should be energetic in proportion; whereas, as yet, no real effort has been made at all. A little squeaking now and then does no good: a hundred voices or pens are required in order to protest against the actual system with any effect, and to rouse the attention of public opinion to it.

AN ARCHITECT.

* A view is given in the *Brighton Herald* of April 15.

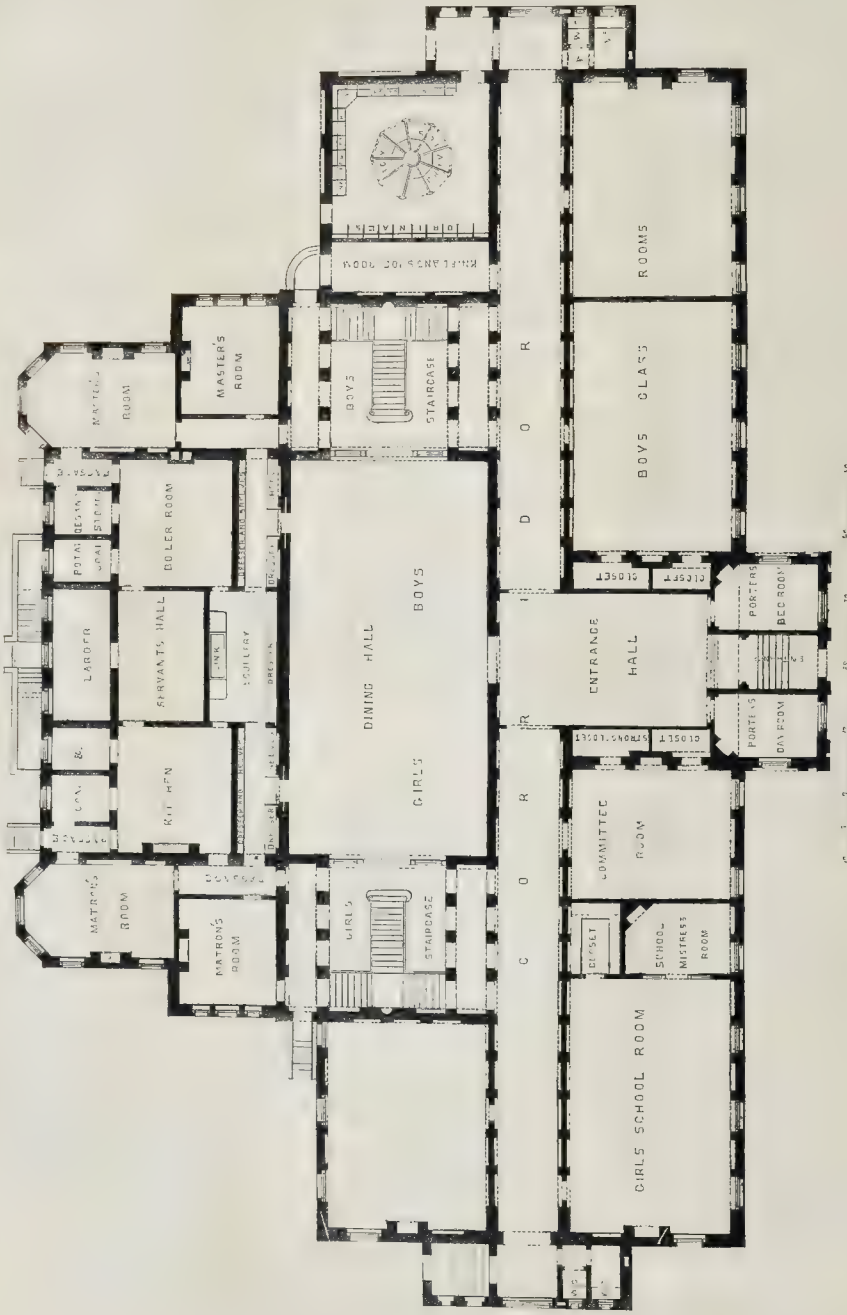
THE CARLTON CLUB.

WE have received letters from two members of the club complaining that the architect's plans have been altered, so that instead of the doorway being in the *centre* of the façade in Pall-mall, it will be at the western *end*, occupying the room of the *second* window of the present coffee-room. Of course, that room must be entirely altered. The alteration, they say, will cost *at least* 10,000*l.*—perhaps more. What they specially direct attention to is the injury which will be done to the building externally by placing the door at the end of the front.

CITY OF LONDON FREEMEN'S ORPHAN SCHOOL.

WE told our readers the other day of the opening of the Orphan School, nobly founded by the City of London, at Brixton, and gave some particulars of the structure (p. 173). These particulars will be made clear by the accompanying plan of the ground-floor, and view of the principal elevation. It is intended, as we then said, for the accommodation of about 100 children, and was built by the Messrs. Piper, from the designs of Mr. Bunning.

The front of the school is of red brick. The dressings are of Portland cement,—the city arms and supporters carved in Portland stone, by Mr. Henning and his Son, by whom also, as we said, the internal modelling after Hogarth was done. The roof over the dining-hall is framed in wood, with iron rod ties across: the whole of the roof for about 6 feet down from the ridge is glazed with rough plate-glass.



When Mr. Bunning's health was proposed after dinner on the day of opening, he alluded happily to the sculpture on the stairs—Whittington on the boys' side, and Helen Walker on the girls'—as historical statues, with their histories and associations, taking the place of the conventional charity boy and girl in their accustomed costume. His allusion at the same time to Hogarth and his doings, and the natural connection with his contemporaries to which the reliefs in the dining-hall might lead, and the influence thereby to be produced in the youthful mind, was a good suggestion well applied.

The general arrangement is, that the boys occupy the right wing, the girls the left; but as the boys outnumber the girls, the whole of the two-pair story is appropriated as a dormitory for the boys, and a moiety of the one-pair forms an infirmary. The residence of the master is behind the boys' portion, and that of the mistress behind the girls'.

It is right to mention that Mr. Benham, of Wigmore-street, put up the hot-water apparatus, and provided the cooking paraphernalia, in which are all the modern appliances.

The external cornice, which makes the gutter, is formed of plate-iron galvanized, and the consoles are of cast-iron.

FALL OF HOME TIMBER.—The present high price of timber is said to be inducing many of the landed proprietors of this country to convert large quantities of their timber into money.

GROUND PLAN OF CITY OF LONDON ORPHAN SCHOOL.

CITY OF LONDON ORPHAN SCHOOL, BRIXTON.—Mr. Bunning, Architect.

A DESPATCH FROM WEST HARTLEPOOL.

It is wonderful what has taken place here ithin the last three years. On a former visit e West Harbour, although in a very unfinished ate, was then giving strong evidence of its eat utility by sheltering many a frail bark om the pitiless storm. One dock only was en open. The great importance of the posi- on soon rendered another dock necessary: is was opened with great ceremony and re- icings last year, and upon my recent visit an my of "navvies" was occupied in penetrating nother earth for still another dock.

Only a few years back the whole of that part f the ground lying west of Hartlepool was arren, yielding little or no profit: it now bids ir to be one of the most important commercial tations in the country. With the increase of hipping have come increase of supply, increase f accommodation, population,—man's wants, hysical and moral: houses are springing up in ll directions, streets stretching out from the entre of business, the docks north, south, east, nd west. Fearless of consequences, and un- wed by the restrictions of a Building Act, oundations are dug in the recently-deposited allast brought in in exchange for the coal or ther merchandize, which is to be freighted to ome far distant shore. Reckless of the future, ards of land are bought and houses *run* up two nd sometimes three stories in height, with alls of the *immense thickness of half a brick*, oists like laths, sea sand, pine timber, and very other enormity necessary for turning money quickly: true it is that a puff of wind occasionally levels a few of these frail edifices, and the recurrence of walls blown down and a roof unshipped reminds me very much of the palmy days of railway engineering, when, if a *few* bridges fell down, nothing further was thought of than to sweep away the rubbish and begin again.

Fortunately, some little attention has been paid to the laying out of the streets: the main streets are wide and sufficient for their purpose, but the small streets are narrow, close, and will, I fear, become unhealthy. A good open space is being left about the new church. I have, perhaps, said sufficient about the houses; yet, bad as they are, all new places spring up in the same manner: you can hardly expect the first *settlers* to do more than provide a mere protection for themselves and their merchandise: they put all their money into their "*venture*," and care not for appearances. A time hence, when fortunes are made—and they will be made here—the luxury of architecture will dawn upon them: even at this time, a dream of the art has been embodied in the "Athenæum," in Church-street. Abortion as it is, I suppose it must be considered architecture, as it possesses pilasters, at every conceivable variety of distance apart from each other, an entablature of the most *original* design, a combination of form in the contour of arches, the profiling of mouldings, and the unity of form and material that *might* satisfy the most inordinate lover of the picturesque and the original. I believe this was the first building of any consequence erected at West Hartlepool, and I am informed it has answered its objects admirably. Close to the docks, the dock-office forms, with its clock-tower and generally solid looking character, an agreeable though plain building: the houses facing the docks have certainly a better appearance than those farther off, but I understand these houses are all built in the same slight manner. One thing I noticed, which is practically a very good thing, and that is, the shop-shutters are all, or nearly so, revolving shutters, made of boards, of course increasing in width as the circumference increases round the axis.

Stone is very abundant here, and lime excellent, and it astonishes me that stone is so seldom used in the houses: true it is that the houses could not be built in such a card-like fashion with stone, or perhaps the labour would be too great: be this as it may, stone—and it is a beautiful stone here—is only used in the larger buildings.

At the end of Church-street a large church has been built, now nearly completed: this building is another step in the right way: it is a large building with lofty western tower: the style of the architecture is of the thirteenth century; and although very plain, its massive features render it one of the most striking edifices of the kind in this part of the country. It is erected, I may say, almost in the quarry from which the stone has been procured: it is cruciform and rather singular in its plan.

The four piers at the intersection of the nave and chancel with the transepts, support stone arches: the centre portion is covered with an open timber arched roof, surmounted with a lantern. All the other roofs are of open timber framing, with arches upon stone corbels. The length of the building from the west door of the tower to the east end of the chancel is about 150 feet, and across the transepts about 89 feet. In all the windows there is some stained glass, principally in the borders: the general glazing is in ornamental patterns. Mr. E. B. Lamb is the architect.

There is still much to do at West Hartlepool, but the energy of the powers that be, and the desire to establish a good town suitable to the increasing wants of its commerce, will, I have no doubt, eventually be the means of obtaining this great desideratum. Viator.

PURIFICATION OF COAL GAS.

Even those who insist on the comparative purity of our metropolitan gas have admitted, so far as regards one of the most obnoxious of its defilements, namely, sulphuret of carbon, not only that it *is* contaminated with this impurity, but that all endeavours to withdraw it, short of destruction of the gas itself as an illuminator, have hitherto been fruitless. It ought to afford the gas companies high gratification, therefore, to learn that it is positively asserted that this grand desideratum has at length been attained, and that the alleged means of withdrawing, not only the sulphuret of carbon, but at same time the ammonia with which admittedly their gas is also contaminated, are so simple, so available, and so easily applied, that no new or expensive apparatus whatever is requisite in order to accomplish an end which will not only remove more than one constant source of mischief, but greatly enhance the illuminative power, and hence the value of their gas, and that, too, at a cost to themselves almost nominal. All that is necessary, it is stated, is to use strata of hydrated clay along with the lime usually employed in the purification of coal gas. The efficacy of this mode of purification has already been tested, it appears, at the Wakefield gasworks, on upwards of 3,000,000 cubic feet of gas. The discovery is a practical one, which, in fact, has been patented jointly by the chairman of the Wakefield Gasworks, Mr. W. Statter, and another gentleman, also resident at Wakefield, namely, the Rev. W. R. Bowditch.

Hydrated clay, like some few other interesting chemical substances, forms threefold combinations, and so, in this case, effects its purpose. It not only unites, it is said, with the ammonia of the gas as with a base, but at same time with its sulphuret of carbon as with an acid, and thus removes both of these noxious impurities from the gas exposed to its influence. Its good offices are said to be not even limited to these; as, in alternation with the lime of the usual purifiers, it assists in removing tarry vapour and other impurities.

The illuminative power of the gas, moreover, is thus said to be positively increasable from 22 to 33⅓ per cent.

The following results are given as rather below than above the average of a considerable series of experiments:—

"Feb. 14th, 1854.—Gas made with one-seventh cannel coal:—Lime purification: 5 feet of gas burnt per hour gave light equal to 12¼ sperm candles. Clay purification: 5 feet of gas burnt per hour gave light equal to 15 sperm candles. Gain: Light of 55 candles per 100 feet of gas, or 100 feet clayed equal to 125 limed (nearly).

March 2nd and 3rd.—No cannel coal used:—Lime purification: 5 feet of gas burnt per hour gave light equal to 11¼ sperm candles. Clay purification: 5 feet of gas burnt per hour gave light equal to 15½ sperm candles. Gain: Light of 75 candles per 100 feet of gas, or 100 feet clayed equal to 132½ feet limed."

On this point the patentees say:—

"An increase of light, ranging from ¼ to ⅓ is an improvement upon which most gas companies would have felicitated themselves had it, and *it only*, been attained by superior management, at a cost of no more than ½d. per 1,000 cubic feet: the production of light is the object of gas manufacture, and the advantage just named may be expressed commercially as an increase of about ½ of the article produced, at an expense of $\frac{1}{40}$ of the cost of production—gas being assumed to cost 1s. 8d. per 1,000 feet. Practice cannot but receive with gratitude the boon presented for acceptance by her parent Science."

Of course, we are not blind to the circumstance that the patentees of this invention have a personal interest in giving as high a colouring as possible to the alleged advantages of their patented discovery. We merely quote their statements in order to show that it is not only the duty but the self-interest of the gas companies to look into this matter, and at least to give the proposed method a fair trial, since they acknowledge that the removal of sulphuret of carbon is a great desideratum which is yet to be realised. There is, moreover, we think, a high probability that there is little or no exaggeration in what is alleged. The result of the use of clay at Wakefield is distinctly stated to be uniformly successful, and to bear out all that is said of its value.

Clay or alumina is one of the cheapest and most abundant substances in nature. Its cost, therefore, is out of the question, even although no positive benefit in increased illuminative power were attainable by its use. The only expense to speak of in testing its utility will be the cost of licence from the patentees, which will be as nothing when placed in competition with the alleged advantages. We feel more assured than ever, then, that the day is at hand when our metropolitan gas will indeed be so pure that it will find ready and extensive access to our private dwellings, and that the only points to be further urged to that desirable end will relate to the requisite general arrangements as to fittings and as to ventilation,—both of these points of great practical importance, to which we have repeatedly drawn attention, and on which we shall yet again, and very soon we hope, have more urgent reason than ever to dwell.

PROVINCIAL NEWS.

Spalding.—Four tenders were offered to the Local Improvement Commissioners for the two chapels in the cemetery here, viz. Mr. W. Sharman, for cemetery chapels, 1,690*l.* and the wall at 9s. 3d. per yard, 387*l.* 11s. 6d.; Mr. Cousins's tender for the boundary wall only, 931*l.* Mr. Dolman's, which was accepted, is as follows: for the two cemetery chapels, lodge, gate, front wall, and pallisades, 1,846*l.* and the wall round the cemetery, 838 yards, at 8s. 335*l.*; total, 2,181*l.* The whole to be completed in six months. Mr. Pilkinton, the architect, attended with plans of the chapels, lodge, &c. when a lengthy discussion arose about the ornamental crosses proposed to be placed on the chapels. The architect urged that the cross was being adopted even by Dissenters, as an ecclesiastical ornament for their chapels. The proposal, however, was rejected, although the Rev. G. N. Wright, and the chairman, while expressing themselves opposed to popery, considered these buildings should be distinguished from barns or corn exchanges. A discussion then arose as to the road, when it was stated that 45*l.* a mile was not an unfair cost to keep them in repair. It was resolved that the cemetery be proceeded with at once. The Royal Exchange Office had agreed to grant the loan of 7,500*l.* at 5 per cent.——The site of the new Corn Exchange is settled: the new building will therefore be commenced as soon as possible.

Hertford.—The foundation stone of new almshouses, in place of those at Butcherly-green, was laid near the new School of Industry on Monday week by Mr. Townshend.

Bedford.—The Bedford Schools Committee have resolved that a report should be prepared, and presented to a special meeting of the trustees, recommending that advertisements be inserted in the local newspapers, offering a

premium for the best plan of enlarging the schools.

West Tarring.—This fine old Sussex church has been completely restored, under the direction of Mr. Joseph Peacock, architect. Entire new roofs have been put to the nave and aisles with open timbers, and covered with Horsham stone. The whole of the church has been reseated with open benches, and the aisles paved with black and red tiles. The pulpit and reading-desk are of carved oak, enriched with the tooth ornament, and stand near the chancel arch. The font, which is central, is relieved by a carved screen beneath the tower arch. It is of Caen stone, supported on eight Purbeck marble shafts, and is a restoration from a portion of the base of the old font. A memorial window has been placed in the south aisle embodying the two great commandments, and illustrated by the parable of "The Good Samaritan," and "Christ Feeding the Multitude." The font and window (in memory of the late John Lucas, of Heene) are presented by members of the family, otherwise large contributors also. The works were executed by Mr. Myers. The cost, 2,200*l.* The chancel has been *repaired only* by the Ecclesiastical Commissioners for England. The restorations are mainly attributable to the continued exertions of the vicar, the Rev. John Wood Masters.

Holyhead.—Upwards of 1,500 men are now employed at the Holyhead new harbour works: a dozen locomotive engines are in use, and about 4,000 tons of solid rock are deposited daily. The Great Northern Breakwater, which is to be 5,000 feet in length, and running out to Platters-buoy, is expected to be finished in August next.

Walsall.—An adjourned special meeting of the Town Improvement Commissioners was held on Wednesday before last, for the purpose of electing as town surveyor one of five candidates chosen as the most eligible of upwards of twenty whose testimonials were examined. Each of the five gentlemen was personally examined by the board, who were unanimous in appointing Mr. David Davies, of Neath, Glamorganshire. In his last engagement he had the general superintendence and surveying of public roads in the county of Glamorgan. He had lately resigned that appointment, and accepted a Government situation in New Zealand, worth 300*l.* a year for seven years, but has thrown it up. The salary of the surveyor amounts, with a house to live in, to about 120*l.*

Retford.—A great many estimates were sent in for the erection of the new school-house and master's house for the Royal Free Grammar School, when that of Messrs. Wilson and Ashton, of Retford, was selected. The amount of their estimate is 6,164*l.* The architect is Mr. Burton.

Burnley.—The Burnley Improvement Commissioners have had a Bill before a Parliamentary committee. In this Bill they seek powers for an extension of waterworks, construction of public cemetery, protection of river from building or other encroachments, and for erection of public gasworks "as a *dernier ressort*," says a local paper, "against the high charges and illiberal policy of the gas company. That company," it adds, "has also *its* little Bill in Parliament, by which the shareholders seek increased powers to enable them, among other things, to capitalize profits to the amount of no less than 19,200*l.* independently of dividends. The Improvement Commissioners propose in their Bill to adopt 3s. 6d. per 1,000 cubic feet as the maximum price of gas: the company in *their* Bill modestly ask for 4s. 6d. *The Parliamentary committee, however, came to the decision on Tuesday in last week that by whomsoever the gas is supplied the price shall not exceed three shillings per* 1,000, and there is every probability of this decision being acted upon." The Improvement Commissioners have consented to waive the right of manufacturing gas on condition of the company agreeing to carry out the decision of the Parliamentary committee. In the event of non-compliance they propose to empower another company to lay down mains and supply the town with gas. "Under any circumstances," concludes our authority, "the decision of the Parliamentary committee is the death-knell of extortion in the monopoly of gas in Burnley."

Sheffield.—The ceremony of consecrating Brightside Church was performed by the Archbishop of York, on Wednesday before last. The church is a Gothic edifice, erected on land given by Earl Fitzwilliam, at the south end of Grimesthorpe, at a cost of about 1,600*l.* The vestry-window, which is of stained glass, has been presented by Mr. R. Drury, of Sheffield. The Rev. Canon Blackburn, while preaching the consecration sermon, stated that, in 1816 and 1818, fifteen districts had been formed in the parish of Sheffield, and more were about to be made: eight new churches had been raised, and an additional number were about to be erected: thus, within the same period no less than 22,000 new churches and 1,255 new parishes had been formed in the country, at a cost to the state of 1,663,429*l.* and to private benevolence of 7,423,571*l.* In the same period much had been done by other Protestant bodies.——Since the monument to the late Ebenezer Elliott was projected in Sheffield, many of the friends of the late Corn-law Rhymer have begun to entertain apprehensions that it was destined to remain a "figure of speech" only. A letter from Mr. Roebuck, M.P. to one of his constituents, has, however, had the effect of removing their misgivings. Mr. Roebuck reports that he has seen the statue, which only awaits a few finishing touches at the hands of the sculptor; and that it bears all the appearance of a good likeness, and is easy and natural in character and position.

Cotham.—A new east window has lately been placed in Balderton Church by the Millington family. A window on the south side has also been repaired and filled with stained glass by Wailes; the whole completed under the superintendence of Mr. Charles Baily, of Newark.

Arkindale.—The foundation-stone of a "Free Christian" chapel and Sunday-school, according to the *Gateshead Observer*, was laid on 8th inst. at Arkindale, near Richmond, in Yorkshire, by Mrs. Bateman, of London. The site has been presented by Mr. Jaques, of Easby; and the Earl and Countess of Zetland have contributed to the building fund.

Kelso.—A committee has been appointed at a meeting of farmers and landlords, in order to consider as to the erection of a covered corn-exchange in Kelso.

SIGHTS AND SCENERY.

The Haymarket Theatre.—Easter has set the scene-painters and machinists to work, although not to the same extent as on some previous occasions, the Lyceum and the Olympic contenting themselves with light pieces not requiring decorations. For the piece at the Haymarket, "Mr. Buckstone's Voyage round the Globe, in Leicester-square" (say, "Thank ye," Mr. Wyld), a dramatic review by Mr. Planché, touching brilliantly the events and exhibitions of the day, some exceedingly good scenery has been painted by Mr. Callcott, including the Straits of Gibraltar, the *Ripon* steamer, with the Grenadiers on board, on her passage to Malta, Constantinople, and the Golden Horn. There is also a clever representation of the front of the theatre, with which the piece opens, but in some parts advantage has scarcely been taken by the artists of those opportunities which Mr. Planché knows so well how to give, and which have materially assisted to raise the position of the scene-painter in the eyes of the public. The piece was a complete success, nor could it be otherwise: it is full of point and amusement, and should fill the house for many nights to come.

The Adelphi Theatre.—The opening scene for the Easter piece here, "The Overland Journey to Constantinople," a Fairy Encampment, is very effective, and the same may be said of several others, and of the whole getting up. The piece is not written *exactly* like the last we spoke of, but it is nevertheless very amusing and showy. If it were our practice to go into the merits of a drama, we should use some strong terms of praise in speaking of "Two Loves and a Life," which is being played here, and which ought to be visited by every playgoer, as well for the merits of the acting of Madame Celeste (vigorous and discriminating), Miss Woolgar (tender and elegant), Webster (subtle and refined), Leigh Murray (manly and clear), and Keeley (richly comical), as for the excellence of the piece itself. It has not had half the praise it deserves.

The Cyclorama, at the Colosseum.—The destruction of Lisbon, exhibited here for some time, has given place to a series of large dioramic pictures, painted by Mr. J. McNevin, representing Naples and its neighbourhood, Vesuvius, and the excavated city of Pompeii, including, as a termination, a view during the eruption which buried it. The declivities around the bay, lined with villas and hallowed by associations, the lovely hill of the Vomero, Portici, Torre del Greco, illuminated for a fête, and the embalmed Pompeii, as it is now seen, are charmingly painted. The views of the latter give a better notion of its appearance than is usually conveyed. The closing scene represents the amphitheatre as it now appears, with Vesuvius smoking behind, when suddenly, with clash and bang, darkness and flames fill the air, the amphitheatre is seen filled with an affrighted multitude, and the streaming lava and falling ashes leave no hope of escape to any. The execution of this effect, a transparency, is inferior to the rest of the work, but it has its value in telling the story.

Canada, next the Polytechnic.—In the theatre next door to the Polytechnic, Regent-street, Mr. W. F. Friend has set up a moving Diorama of Canada and the United States, with the descent of the Niagara and St. Lawrence, painted from his own sketches by himself, in conjunction with Mr. Henry Warren, Mr. E. G. Warren, and Mr. Weigall. It is for the most part brilliantly painted, and, aided by pleasant descriptions modestly delivered by the artist himself, and various songs and glees, forms an exceedingly agreeable as well as instructive entertainment. Niagara is particularly well set forth, and there is a clever view of the Great Victoria Iron Tubular Bridge across the St. Lawrence, two miles long, and forming part of the Canadian Grand Trunk Railway. It closes with a bustling view of New York by night on the 4th of July, the anniversary of American independence, and well deserves a visit.

BELFAST GOVERNMENT SCHOOL OF ART.

The annual meeting and *conversazione* of the patrons and friends of this institution was held a few days since in the rooms of the establishment, College-square North. A very large and fashionable assemblage of the gentry of the town and neighbourhood, of whom at least half were ladies, attended to witness the proceedings. The various apartments of the building were arranged with taste and elegance, one of them specially devoted to an exhibition of practical art in manufactured goods.

The mayor was voted to the chair. The secretary, Mr. S. Vance, read the report, which stated that during the year a considerable addition had been made to the library, and examples of art, and that the number of pupils attending the various classes within the walls and in public schools connected with the School of Art were,—Public classes, females, 9; males, 100. Governess' class, 12; ladies' class, 29; gentlemen's, 14. May-street National School, 37; Fountain-street National School, 27; Rev. Mr. Hanlon's, 17. Total, 245. The committee hoped that, during the coming year, a considerable number would be added to the various classes, and they had no doubt that the best exertion of Mr. Nursey and Mr. Wood would be employed to give efficiency to the new arrangement.

Mr. Cairns, M.P. delivered the annual address, in course of which, and while meeting objections to the cultivation of art in our manufactures, he made some remarks on the history of paperhanging which we may briefly quote:—"The objector will say, 'Look at the French papers which ornament our rooms, and you will constantly find on them the best designs, and that ought to show that the French people have some peculiar style which we cannot arrive at.' Now, I say, take this very case of French paperhanging. The fact is, that fifty years ago the whole of the paperhanging trade was in the hands of English manufacturers. What happened then? The English manufacturers, satisfied with the practical monopoly of the trade, and free from all competition, turned their attention rather to the production of a paper remarkable for its cheapness and the improvement of the mere material, than to the improvement of the patterns on the paper; and they continued to reproduce the old patterns; or if they brought out new ones, such

as were not composed with any attention to the rules of taste or art. Whilst this was going on in England, there commenced in France that artistic education of the population to which I have referred, and one of the first subjects of its operation was paperhanging. The artisans, therefore, who were instructed in the Government schools found it very easy to produce patterns infinitely superior to anything in England. Consequently, they got a-head of the English manufacturers, and that superiority they obtained partly by their having the first start in the matter, and partly by the supineness of the English manufacturers, and they have maintained it to the present day; so that it is quite true that we get the best papers from France, but it is also true that this is owing to the circumstance that the English manufacturers did not choose to do that justice to their product which a little care and pains would have afforded. But we have a proof that the art has not left the country, and that if the artists are properly trained we can yet resuscitate the trade. That proof is this: Mr. Owen Jones educated a band of men in elementary instruction in drawing, and within eighteen months he produced papers, manufactured in England, and with patterns designed there, which, in the opinion of every one in England and on the Continent who has seen them and is competent to judge, are superior to anything that has been brought out in France. This was because the attention of these men was brought to bear on the subject, and because they were placed under the instructions of one who was competent to guide them."

PROCEEDINGS UNDER METROPOLITAN BUILDINGS ACT.

SEWELL (Appellant) *v.* BADGER (District Surveyor, Respondent).

THIS case was heard at the Sessions-house, Maidstone, on the 4th of April, before the Earl of Romney and a bench of magistrates.

Mr. Clarkson, in opening the case for appellant, stated that a conviction had been made by Mr. Secker, the magistrate at Greenwich, against Messrs. Sewell, builders at Sydenham, at the instance of Mr. Badger, on the ground that due facilities had not been afforded him, as district-surveyor, in inspecting a building at Longton-grove, Sydenham, erected, at first, as an insulated building, but which was afterwards converted into two dwellings, by bricking up certain openings, originally left in the main division wall (which was built of the requisite thickness for a party-wall), and surveyed throughout by Mr. Badger from the commencement to its completion. The builder had given his first notice to the district-surveyor for an insulated building; and a second notice when he proposed to alter it into two. The district-surveyor, however, considered that Messrs. Sewell were endeavouring to defraud him of the fees to which he was entitled under the Act, and made application to the magistrate for the purpose of taking proceedings by way of penalties; but the magistrate refused to entertain it. Mr. Badger then went before the official referees, under the 14th section, when Mr. Clarkson attended for Messrs. Sewell; and the referees, after due deliberation, awarded that "there was no evidence of any act done by Messrs. Sewell contrary to the statute;" and ordered Mr. Badger to pay the costs of the award, as also the costs of Messrs. Sewell. The award was taken up by the builders, who applied to the district-surveyor for their expenses, which he refused to pay. A notice was then served by him on Messrs. Sewell of his intention to make a survey of the party-wall, and for that purpose required them to open the foundations,—to cut into the chimney-breasts and lay open the flues,—to take up the floors and portions of the several ceilings in order to exhibit the trimmers and timbers of partitions, together with various other cuttings and maimings, which were considered by the builders as amounting to a partial destruction of the building. On the non-performance of these requirements, the district surveyor took out a summons, and Messrs. Sewell being unable to attend before the magistrate, the present conviction was obtained. Mr. Clarkson then stated that it was against this conviction Messrs. Sewell were advised to appeal, and intimated to the Court that his learned friend (Mr. Horn) held a retainer on the part of the respondent, though he was not instructed to support the conviction; and as this would have the effect of putting the appellants, whom he represented, to the enormous expense of coming down there (twelve witnesses being in attendance), gross injustice might be done, if the appeal was well founded, by no party appearing to support the conviction.

The Magistrates, after a short conference, announced through the noble chairman, that they had come to the determination to quash the conviction.

Mr. Clarkson then addressed the bench to be allowed to prove his notice of appeal, and the recognizances that had been entered into, and urged that he was entitled to ask for the costs.

Mr. Horn, on behalf of the respondent, interposed by stating that Mr. Badger had been subpœnaed to attend the Assizes at Kingston, and that, as he had only that moment received instructions to defend his client, he intreated the Court to reconsider its decision, or to allow the case to stand over to the summer sessions.

The Bench again conferred, when the Chairman stated that, as the conviction had been quashed, Mr. Horn could only be heard as to the application for costs.

Much warm discussion took place between the counsel on both sides, when Mr. Horn, on behalf of the respondent, stated that he was not prepared to go on with the case, and he would rather pay the costs of the day, and let the matter drop altogether.

The Chairman announced the conviction to be quashed, and the costs to be paid by Mr. Badger.

The case excited great interest, and will be a costly one.

A "SUBLIME STORE" AT PHILADELPHIA.

AN American "Subscriber from the beginning," with the signature C. L. writes us from Philadelphia, drawing our attention to what he calls "one of our sublime stores that we build," and which the local *Ledger* calls "a business palace." The store is five stories high, with a front of Quincey granite on Market-street, and pressed brick, with heavy granite dressing, on Commerce-street. It is between 27 and 28 feet broad, and 205½ feet long. To the first and second stories are added a wing 28 by 31 feet, on the west side. The main entrance is through a vestibule, 8 by 12 feet, adorned with tesselated marble. This leads to the first floor, which is finished in the most elaborate and splendid manner. The shelving is decorated with ornamental pilasters, having carved caps and a rich entablature. A handsomely-carved cornice, tipped with gold, extends around the entire room, with enriched brackets and dentils, in keeping with the frescoed (?) walls and ceiling, and the elegant bronzed chandeliers, of new and beautiful pattern, producing an attractive and gorgeous effect. The stairs in the wing or tower are elliptical in their design, and extend from the passage in the sub-cellar to the roof, seven stories, or nearly 80 feet high. They have massive carved oak rails, capped with black walnut and ash. The second story is finished in a style very similar to the first, with a counting-room, splendidly furnished, and a room in the rear, cut off by a glass partition, for a sample-room. This is to be fitted up in the same gorgeous manner with other parts of the store, and is to be covered with a fine Brussels carpet. The walls and ceiling are also frescoed, and much care has been taken to arrange the colours so as to throw the proper shades on the various kinds of goods. Adjoining this is the hatchway and hoisting-machine, extending from the first to the fifth floors, which is an entire new arrangement. The third floor has a bath-room, with hot and cold water, &c. The two upper stories are the same as those below, except that the walls are plain. This store has been built with the very best materials, and the workmanship is acknowledged to be of the very finest character. There are upwards of 150,000 feet of joists, each four by 15 inches. The quantity of lumber used is upwards of 252,000 feet, with nearly 40,500 feet of shelving. Communication can be had by trumpets and bells with every floor. The whole establishment is brilliantly illuminated. The chandeliers are bronze, relieved with gold, and "quite pretty." The architect is Mr. J. C. Horie; builder and superintendent, Mr. Charles A. Rubicam; the painter, John Gibson; the maker of the counting-room, desks, and furniture, J. T. Hamitt; plumbers, Forsyth and Brother; excavator, William Wilt; stonemason, Michael Carman; bricklayer, David Thorne; plasterer, James Spencely; smith-workers, Stewart and O'Hare; tin-workers, Ford and Melloy. The granite front, which both for design and execution excels any similar structure in the city, was put up by S. K. Horie. Our correspondent only wishes they had some of our "English critics to tell them which is Gothic and which is Grecian" in some of these "splendid architectural piles."

Notices of Books.

An Account of the Progress of the Expedition to Central Africa, performed, by order of her Majesty's Foreign-office, under Messrs. Richardson, Barth, Overweg, and Vogel, in 1850-53. By AUGUSTUS PETERMANN, F.R.G.S. London. 1854.

A VIRULENT attack was made on the progress of this expedition in the *Nautical Standard* of January last, merely, as it would appear, on the narrow-minded ground that its survivors are both Germans, though acting under the British Government. It is even believed that an official connected with the Geographical Society, had something to do with it, and at all events, while in the "authorized report" of a meeting of the Society, a paper actually giving an account of the progress of the expedition was suppressed; an attack, in form of a speech also given, had been very prominently published, in juxtaposition to this "authorised report" of the proceedings. This is an instance of the danger of allowing secretaries too much license in dealing with reports and papers. In this instance, Mr. Petermann deals very summarily with the attack upon his countrymen, first knocking their assailants down with his great folio, published "by authority of her Majesty's Foreign-office," and then cutting them up into small pieces, in a "Letter" of his own, addressed to the President and Council of the Society.

VARIORUM.

THE Kilkenny Archæological Society's Transactions for the year 1852, forming Vol. II. Part I. of the doings of this active and prominent Association, are now on our table, and, as already intimated, by new arrangements the proceedings of the present year are to be facilitated and issued as speedily as possible in portions after the papers have been read. The present volume is fully illustrated, and contains a large mass of archæological, architectural, and antiquarian lore.——A reissue of Mr. Knight's very popular "Land we live in," in threepenny monthly or weekly parts, by Messrs. Orr, of Paternoster-row, will gratify a class heretofore shut out from its pleasant pages. It appears just as it did before, in good bold type, on large octavo, with illustrations.——Orr's "Circle of the Sciences" is thriving. The last number contains the commencement of a treatise on the mathematical sciences, by Professor Young; and the previous number, a continuation of Professor Owen's Treatise on the "Forms and Structures of the Teeth."——The "Home Companion" (the same publisher) has taken a fresh and more convenient shape, and maintains its character as an interesting publication.

Miscellanea.

LAMBETH: A NEW MOVE IN TRADE.—On Saturday last was launched from the dock, Nine-elms, a fine merchant ship of 500 tons, the first and largest vessel of her class that has been built in this part of the Thames. Her bottom is fashioned like the large coal barges, with ships' upper works, and with a spacious flush deck, and *will draw only* 10 *feet of water*, giving ample room for stowing timber, tallow, hides, &c.; being intended for the East country trade. Steam-power can also be applied, if required. She went off in capital style, and was named by the owner's daughter, Louisa Shelbourne, after whom she is called. She is sheathed with Belgian zinc, fastened with zinc nails. This metal is now 75 per cent. higher than it was at the Great Exhibition. Copper is much stronger, and could have been used with better effect, 12 oz. per foot lighter than this vessel is sheathed with: less labour would be also required, and for *hard work, surely the very best material should always be chosen*. And if strips of zinc, 8 inches by 2 inches, were screwed on each course of copper, the galvanic influence would prevent oxidation of the copper, and keep the barnacles from fastening on the metal. I can testify to a case where, after twenty months, a vessel returned from her voyage with the copper as clean as a mahogany table.—B.

BUILDINGS IN BRIGHTON.—I can bear testimony to the scamping manner buildings are erected by men who dub themselves builders, engaged on houses of magnitude near to me. I view with regret the very dangerous mode of forming boarded trimmers instead of brick, and using as a substitute for stone, Baylis or cement hearths, in many cases, I see, not an inch thick. Heat causes the boards to contract and crack the cement. An old-established builder related a case that came under his especial notice, in Lansdown-place, not long since: the boards ignited from this cause. In the house I am now staying in, though recently erected, the joiner's work is the climax of scamping; doors shrinking at every joint, stairs cracking as you ascend or descend, partitions shrunk for want of proper trussing, window-frames loose and separated from the brickwork. What can be expected when most of the works are prepared, in the buildings during their progress, of unseasoned materials. There are several very respectable old-established builders here who perform works in the best manner, as many London architects can testify.—PRO BONO PUBLICO.

DRY BASEMENTS.—I beg to add a little of my practical experience of how to prevent a house being damp, *especially* at the basement. I reside in a house I built in the wet winter of 1852-53, and occupied in April without harm. The basement floor is 2 feet 6 inches in the ground, which lies up close to the wall all round, yet the walls below are as dry as above ground. At the floor line is laid a thickness of cement on the brickwork, and it is then cemented up above ground, and the floors are all of cement, so that it is watertight: the inside walls are also cemented ground high. The front and ends of the house are cemented all over, stone-like, and keep dry, while the back is not, and in wet weather is damp, being in an exposed situation. But the use of the cement requires great care; in fact, the ordinary manner of doing it makes its failure a daily occurrence, while works of thirty or forty years' standing can be pointed to as perfect by—J. P.

THE SEWERS COMMISSION.—We have reason to believe that the cause of Lord Palmerston not having as yet appointed a new commission is, that he is waiting for the report of the City of London Corporation Commission, in order to see what the views of the commission are with reference to there being but one executive as regards sewers for the whole metropolis. This report will be presented immediately after the Easter recess, and we anticipate that a bill will shortly afterwards be introduced to place the management of the sewers and other matters upon a permanent footing. This measure ought unquestionably to become law before the prorogation of Parliament. To introduce, as was the case last year, merely a continuation bill, would be pregnant with great evil. Weeks and months would pass by, and when Parliament met again the metropolis would be in the same unsatisfactory condition as at present. Six precious years have elapsed since the first commission was established. Hundreds of thousands of pounds have been expended, and yet what is there to show for it? The same districts remain undrained, the Thames is still the huge common sewer, and but few of the cesspools have been abolished. The vast sewers, so bitterly complained of as being nothing better than extended cesspools, pregnant with disease and death, are still sending forth their poisonous emanations. The few extensive works, such as the Victoria Sewer, which, instead of costing only 13,000*l.* has already had expended on it 40 000*l.* and is yet incomplete, have proved failures.—*The Observer.*

BUILDING SOCIETIES. — It would be of great advantage, if such societies could act unitedly in anything affecting their interests. Take, for instance, the subject of fire insurance duty, which operates as a serious tax on industrial savings, and which I have no doubt, if taken up vigorously by the societies in a united manner, might receive more consideration than if taken up by insurance offices. If any of your correspondents could give me an estimate of the probable number of societies and members, the amount of capital supposed to be raised annually, and would make any suggestions for an organization of the kind, I think that I could facilitate the object very materially in Manchester and the surrounding district.—J. W. *** There is a Building Society's Almanac, which contains a list of such associations.

WORKMEN AND WAGES. The excavators employed in enlarging the Sunderland Dock lately struck for a rise of 6d. a day, and the abolition of "tommy shops." The dock directors, at their meeting, were surprised to hear of truck, and intimated to the contractors that they would prosecute any who continued the practice. The shops are given up, and the 6d. conceded.——The *Gateshead Observer* mentions a frightful case of rejoicing. The foreman of some extensive works died; and as soon as it was known, the men and boys employed formed a procession, marched to the dead man's house, and gave three cheers. The cause of all this was that the deceased had originated a "tommy-shop" and dram store within the works.——Five brickmakers at Oldham, apprehended under warrants for conspiracy, have been required to enter into sureties to answer any indictment that may be preferred against them at the next assizes.——The house-carpenters of New York have struck for an advance of 1s. a day, making their wages 18s. a day.

ARCHITECT TO THE COMMITTEE OF COUNCIL ON EDUCATION.—The Lord President has selected Mr. Rhode Hawkins for appointment to the office of advising architect to the Committee of Council on Education, in the room of Mr. Westmacott, who has retired.

FLEAS.—PROH PUDOR!—Having taken a small house just fresh from the builder's hand, I am much annoyed to find the upper floor completely swarming with *fleas* all seemingly lodged between the floor boarding and the ceiling underneath. Can any of your correspondents advise me how to eject this army of invaders, the rooms at present being quite uninhabitable?—A VICTIM.

A NEW MECHANICAL POWER: THE ACCUMULATOR.—Mr. R. E. Hodges, late British Vice-consul at Jacmel, while in Hayti or St. Domingo, happened to see an old African in the forest, all alone, with nothing brought with him but a hatchet, a long knife, and a saw. He cut down mahogany-trees with his hatchet, and after lifting them (probably a ton weight each) from the ground to a considerable height, and placing them upon cross-trees, so fixed as to form a convenient frame, there he cut them into rough planks with his saw. Now, the lifting of a log of a ton weight by one man under such circumstances was something extraordinary. Yet it was very simply done, though, perhaps, a little tedious. With his knife he cut numerous creepers, to serve him for ropes. He laid branches on an incline to the top of his frame, and tying the creepers one by one to the elastic branches of the standing forest-trees beyond and above the incline, but in the same direction, on the one hand, and round the log in various parts on the other, drawing each elastic branch by turns to its fullest bent as he tied the creepers, he thus obtained a resilient force in the branches to help him, so that with ease, by means of his hands, he could manage to lift the log by degrees along the incline to the top of the frame. In India-rubber Mr. Hodges has found an application of a similar force to that of the elastic branches of the trees, and by various ingenious devices he has managed to put this elastic force to use as cords, by means of which manual labour may be greatly assisted. Thus, for instance,—"In erecting and fitting machinery, or in bedding masonry, an "accumulator" of convenient power may be attached to the hook of the usual lifting-chain, and again made fast to the body to be so fitted or bedded; and supposing this body to be a stone of a ton weight, the mason and his assistant could depress it at will by the mere weight of their bodies, and effect quickly a perfect bedding." This new power has, it is evident, one peculiarity differing from other mechanical appliances for moving bodies: this is, that the power may be accumulated at any convenient time (even by a single man), and made to act suddenly when required—as for lifting heavy articles out of ships' boats. This, indeed, is the principle of Mr. Hodges' patent projectors for throwing harpoons, &c. For his various inventions on this principle the patentee had honourable mention made of him at the Great Exhibition of 1851.

CANOSA, as is well known, is one of the most celebrated ancient Greek cities in Puglia, and is the only one in the whole kingdom which offers the wonderful contrast of a Greek Pompeii to our Roman Pompeii. It is situated on a rising ground, in the centre of a plain which is surrounded by a semicircle of low hills. Between these and the modern city the plain encloses for many miles of circumference the old Necropolis, or city of the dead. At every step, on digging three or four feet underground, we meet with an old path, which conducts by a descent to a tomb composed of one or more chambers, and which is surrounded on the outside by other funeral apartments. Their "facciate" are decorated with columns and frontis-pieces, and are painted with lively colours; their gates are so well closed by vertical pieces of tufa, that the soil has not been able to penetrate them. We enter, therefore, these habitations of the dead as we walk into the houses of the living. The light of the sun shines in upon them as it did twenty centuries since, —and in the very middle of the first chamber reveals one or more skeletons fully clothed, with their arms or precious ornaments. Around them stand painted vases, furniture of every form, utensils of various kinds, and metals, precisely in the spots where their relatives or dearest friends had placed them. The walls are adorned with elegant pictures, with friezes bearing the figures of warriors who combat, and with decorations of an original style hitherto unknown.—*Athenæum.*

RUSSIA AND AFRICA, AND ARTIFICIAL LIGHT.—Curious juxtaposition, yet closely connected. How so? Simply this—Russia has supplied us with tallow. Africa with palm-oil. But what of that? War with one reduces the traffic of slaves in the other. Reduce our supply of tallow, we extend the demand for palm-oil—"a good in everything." African kings find it more profitable to keep their people than to transport them—*ergo*, war with Russia will decrease the slave-trade.—W. F. B.

DWELLINGS FOR THE WORKING CLASSES.—Having read your criticism, which appeared a few weeks ago, on a monument about to be erected by or under the sanction of a large firm in the midland counties to the memory of a late partner, I beg to suggest a better scheme for their consideration, viz. the erection of some cottages of a superior class for their workmen instead of the *worse* than pigstyes that I saw when in that part of the country last summer. This would be a worthy testimonial to the departed and a great benefit to the living.

A TRAVELLER.

ARCHITECTURAL SOCIETY OF NORTHAMPTON.—At a committee meeting, held on April 3rd, a window of Powell's glass was exhibited by the manufacturers, as containing specimens of the new glass made by them. The amount of the glass used was, however, too limited to give any idea of its effective qualities. A memorial window, to the memory of the late Hon. R. Watson, that has just been placed in the chancel of Rockingham Church, after the designs of Mr. G. Hedgeland, and executed by Mr. Ward, is composed of this new glass. The style of composition and drawing in this window is thought by some too modern, and not the best suited to painted glass. The spring meeting was fixed for Leicester, in conjunction with the Lincoln and other societies, on the 17th and 18th of May. A communication from the Dean of Peterborough acknowledged the receipt of the vote of thanks of the society on the opening of the cathedral to the public, and it was stated that already had Norwich followed the example of Peterborough, and that other cathedrals were meditating the same course. No answer had yet been returned from the committee of the Agricultural Society, relative to co-operation with the Architectural Society for the production of better designs for labourers' cottages.

THE IRON TRADE.—The final result of the quarterly meetings is, that prices shall remain unaltered. The trade is still in an active state, with a good supply of orders, not only for home consumption, but for America, and for the north of Europe itself. The only complaint is, the scarcity and high price of raw materials. Instead of raising prices, however, in consequence, there seems to be a prudent resolution to turn attention to means of reducing the cost of raw materials. Coal is getting more abundant, and there is talk of the erection of an immense steam-engine to withdraw the water from large tracts of valuable coal land in Staffordshire, now inundated, and whereby 5,000 additional colliers might be employed. The iron stone of Northamptonshire is forcing itself into notice.

ENCLOSURE AT CHOBHAM COMMON.—There seems to be a risk of one of the finest portions of this common being appropriated and enclosed for behoof of Sir Denis le Marchant, the chief clerk of the House of Commons, and under certain clauses smuggled through Parliament, it is alleged, to that special end. The portion of common of which it is proposed to deprive the public comprises about 35 acres, beautifully timbered with upwards of 300 ancient trees, many of them 12 feet in circumference. It adjoins other properties, held by the families of the present proprietors for centuries, quite as much as that of Sir Denis le Marchant, purchased by him only a few years since. One of the former, Mr. Richard Gude, jun. has petitioned the Crown against such an enclosure.

THE BARON DE BODE'S BOTTLED-AIR-POWER.—The Piedmontese Government, according to a Paris paper, has just granted a sum of 80,000f. to MM. Sommeillier, Grattoni, and Graudis, for an experiment on the application of compressed air to locomotion, which will probably be used in the ascent of Mont Cenis and the Col de Tende.

WELLINGTON STATUES.—At a recent meeting of the Norwich Wellington Statue Committee, it was agreed to appoint a deputation to approve the statue, previous to its being cast; and Mr. Adam's studio has been visited for that purpose The report is said by the *Norfolk Chronicle* to be in all respects satisfactory. One of the deputation (Mr. Peto) says, "I do not know when I have been so entirely satisfied with the execution of a work of art."——The Falkirk committee have very nearly concluded arrangements for the erection of their statue, which, according to the local *Herald*, will probably grace the Cross of this ancient burgh ere the approaching summer has far advanced. The work of building the pedestal and placing the statue, has been entrusted to a townsman, Mr. James Gowans, of Edinburgh, builder, who erected the Edinburgh statue in front of the Register Office. The execution of the pedestal, which is exceedingly simple, including the carriage of the figure and the complete fitting up, will cost 42*l.* The statue itself will cost 70*l.* so that the two chief items of expenditure amount to 112*l.* The subscriptions already amount to 132*l.*

TO CORRESPONDENTS.

ADVERTISEMENTS.

ART-UNION of LONDON.—The ANNUAL GENERAL MEETING, to receive the Council's Report, and to distribute the amount subscribed for the purchase of works of art, will be held at the THEATRE ROYAL LYCEUM, by the kind permission of Charles Mathews, esq., on TUESDAY, the 25th inst. at ELEVEN for TWELVE o'clock. The receipt for the current year will procure admission for member and friends. GEO. GODWIN,
444, West Strand, April. LEWIS POCOCK, } Hon. Secs.

TO ARCHITECTS AND SURVEYORS.
A GOOD DRAUGHTSMAN, both geometrical and perspective, as desirous of a SITUATION, at a moderate salary.—Address, X. Y Z. 34, South Front, Southampton.

TO MASTER PLUMBERS AND BUILDERS.
A YOUNG MAN wishes to obtain a constant SITUATION as PLUMBER, GLAZIER, and GAS-FITTER. No objection to take the zinc work.—Direct to Y. Z. No 1, Gloucester place, George-street, Southampton street, Camberwell.

A CLERK of WORKS, who has recently fulfilled an engagement of some importance and continuance, is now desirous of a SIMILAR APPOINTMENT. Satisfactory reference can be given as to character and ability. —Address, C. P. C. Westley and Co's, News Agents, Cheltenham.

TO BUILDERS, &c.
A GRAINER is desirous of meeting with a constant SITUATION Can take charge of jobs, and write, if required. Salary required, 33s. per week.—Address, X. L. 15, Bury-street, Bloomsbury.

TO BUILDERS AND OTHERS.
A YOUTH, 18 years of age, respectably connected and well educated, wishes for a SITUATION in a Counting house, Warehouse, or Office. He is quick at accounts, and has been two years and a half with a master builder as clerk and timekeeper, from whom he can receive a most undeniable character.—Address, J. H. JONES, 31, Wyndham-street, Bryanston-square.

TO ARCHITECTS AND CIVIL ENGINEERS.
A CLERK of WORKS, fully qualified to manage extensive works, and possessing first-rate knowledge of construction, is in want of an ENGAGEMENT.—Address, ALPHA, Byron-villa, Battersea, Surrey

A PRACTICAL CARPENTER and JOINER, who can get out detail and working drawings, and has been accustomed to superintend workmen, requires a SITUATION as GENERAL or SHOP FOREMAN, or CLERK of WORKS, or to take the charge of a job.—Address, ZETA, 41, Robert-street, Hoxton.—N.B. Good testimonials

TO BUILDERS, CARPENTERS, &c.
AN industrious Young Man, who has been at the carpentry and joining business six years, wants EMPLOYMENT. Bench work preferred. Would not object to commence at 1l. per week.—Address, R. Mr. Bawtree's, Beehive Coffee-shop, 7, Cumberland-place, Newington, Surrey.

A PRACTICAL, experienced FOREMAN, or CLERK of WORKS, having half his time unoccupied, wishes to ENGAGE himself for THREE DAYS A WEEK.—Address, A. B. 16, Grafton road, Kentish-town.

TO ENGINEERS AND CONTRACTORS.
A SUPERINTENDING CLERK, 33 years of age, is desirous of a SITUATION; is accustomed to the superintendence of workmen, measuring and estimating, a tolerable draughtsman, and fit to conduct a business under and during the absence of the principal Reference to His present employers. Address, W. H. Office of "The Builder."

TO CARPENTERS AND BUILDERS.
A YOUTH, aged 16, WANTS a PLACE as IN-DOOR APPRENTICE.—Apply to H. N. Mr. C.'s 6, Bloomfield place, Pimlico.

TO ORNAMENTAL PLASTERERS AND BUILDERS.
A YOUNG MAN, who has had good practice in the trade, WANTS a permanent SITUATION. Can draw and model Will give references to character if required. —Address, H. I. Office of "The Builder."

A MECHANICAL DRAUGHTSMAN is desirous of a RE-ENGAGEMENT. The Advertiser has had considerable experience as a practical engineer. A small salary would be accepted.—Address, A. B. 160, Southwark-bridge-road.

TO LAND AGENTS, SURVEYORS, AND OTHERS.
A YOUNG MAN, who has been engaged seven years with a practical surveyor, is open to a RE-ENGAGEMENT. He has had considerable experience in estate and parish surveying, tithe commutations, the working out of several inclosures, railway surveying, levelling, &c.; is a good draughtsman, and would require but moderate salary, if opportunities were afforded for improvement.—Address, A. B. Messrs. Noble and Co.'s, Stationers, Market place, Boston.

TO ARCHITECTS.
A GOOD DRAUGHTSMAN being about to leave his present situation, is desirous of a RE-ENGAGEMENT in London or its vicinity.—Address, S. S. 2, Adelaide-place, London-bridge.

EVENING EMPLOYMENT.—WANTED, by an Architect's and Surveyor's Assistant, to Copy or Trace Working, Detail, or Finished Drawing, or to Copy Specifications, Bills of Quantities, &c.—Address, A. B. A. Mr. Cook's, Maiden-lane, Covent-garden.

TO SURVEYORS, BUILDERS, &c.
THE Advertiser wishes for a RE-ENGAGEMENT; he is acquainted with land surveying, levelling, getting out quantities, book-keeping, and a good draughtsman. Good references and testimonials.—Apply, M. L. Mr. Blackburn's, Stationer, &c. 11, Parade-terrace, Regent's-park.

TIMBER TRADE.—The Advertiser, who possesses a thorough knowledge of the above trade, and a valuable connection, desires a permanent ENGAGEMENT, either in or out of doors, with a first-rate London house.—Address, C. D. 13, Cheapside, London.

TO ARCHITECTS.
THE Advertiser, who can have the highest testimonials of ability from his late employer, an eminent member of the profession in London, is desirous of an ENGAGEMENT as ASSISTANT.—Address, H. B. Castle and Lamb's Advertising Office, Bull Head-court, Newgate street.

TO MASTER PLASTERERS OR BUILDERS.
THE Advertiser, a sober, industrious single Man, wishes to meet with an ENGAGEMENT in a respectable firm as FOREMAN PLASTERER. Capable of superintending any job. Good reference can be had. No objection to go to any part of the world. Can model.—Direct to T. W. G. MILLINGTON, Upper Northgate-street, Chester.

WANTED, by a respectable Young Man, a SITUATION as BOOKKEEPER and ASSISTANT, in a Civil Engineer's Office.—Satisfactory reason given for leaving present situation.—Address, V. O. 147, Fleet street.

TO ENGINEERS, CONTRACTORS, &c.
WANTED, by a respectable Man who has had considerable experience in the trade, a SITUATION as MANAGER, DRAUGHTSMAN, or CLERK of WORKS. Is about leaving a similar situation.—Address, R. H. 41, Broad-street, Bloomsbury.

TO TIMBER MERCHANTS.
WANTED, a SITUATION, as Traveller or Salesman, by a party of known experience, possessing a thorough knowledge of the trade. The most satisfactory references can be given.—Address, A. B. Office of "The Builder."

WANTED, by a steady, industrious Young Man, a SITUATION, in a Mercantile, Banking, or Insurance Office; writes a plain, bold hand, and thoroughly understands the immutable principles of bookkeeping. References will be found satisfactory.—Any person or persons wishing to secure the services of one who would study his employer's interest, will please address, OMEGA, Office of "The Builder."

TO ARCHITECTS, BUILDERS, AND OTHERS.
WANTED, a SITUATION by a respectable Man, who can prepare finished and working drawings, is perfectly acquainted with builders' accounts, has a knowledge of land surveying, and can give good references.—Address to W. C. at Mrs. Dawson's, 27, Gloucester-street, Queen-square, Bloomsbury.

TO SMITHS, GAS-FITTERS, &c.
WANTED, a Situation as IMPROVER, in a good jobbing shop, by steady respectable young man, aged 23.—Address, A. G. Mr. Croft's, 188, Piccadilly.

TO ENGINEERS.
WANTED, by a Young Man, a SITUATION in an ENGINEER'S OFFICE. He is a good draughtsman.—Address to E. C. S. 16, Pudding-lane, Lower Thames-street.

TO BUILDERS AND OTHERS.
WANTED, by a Young Man, a SITUATION as CLERK; has had ten years' practice in a surveyor's and builder's office; understands making finished and working drawings, measuring, estimating, and all the requisite duties of a builder's office. Reference, present and former employer.—Address, A. S. 14, Thornhill-place, Caledonian-road, Islington.

TO BUILDERS AND MASTER PAINTERS.
WANTED, a SITUATION, as WALKING or WORKING FOREMAN. Can have a good character as to ability as grainer, painter, glazier, and the painting business in general, having filled the same situation for the last fifteen years.—Direct, prepaid, J. P. 4, Shord's-place, Bell alley, Londonwall, City.

WANTED, a SITUATION as CLERK of WORKS; is well experienced in all the branches of building, can get up plans, working drawings, and has first-rate testimonials from previous engagements.—Address, C. D. 21, Regent-street, City road.

TO CARPENTERS AND BUILDERS.
WANTED, to place an active and well-educated Youth, aged 14 years, as OUT-DOOR APPRENTICE to a CARPENTER and JOINER.—Address, with full particulars, to Mr. THOMAS POOLE, 28, Rochester-street, Vincent-square, Westminster.

WANTED, by an experienced practical Man, a SITUATION, as CLERK of WORKS, or GENERAL FOREMAN. The Advertiser is fully competent to take the management of a church, or any extensive works.—Address, W. L. Office of "The Builder." No objection to the country.

WANTED, ACTIVE AGENTS for the AMAZON LIFE ASSURANCE and LOAN COMPANY, and SICK BENEFIT SOCIETY. A liberal commission and procuration fees allowed. Applications to be made to
ROBERT GEORGE WEAR, F.R.G.S.
1, Ironmonger-lane, London. Manager and Actuary.
Loans on personal security.

WANTED, immediately, several HOUSE PAINTERS; those who have been accustomed to the paperhanging would be preferred. Also, a Plumber accustomed to general business.—Apply, by letter (post-paid, addressed to W. HOLLAND, Decorator, &c. St. John's, Warwick.

TO PLUMBERS.
WANTED, in the country, about 25 miles from London, a person in the above capacity, or as a Three-branch hand.—Application to be made to D. S. Office of "The Builder," stating terms.

TO CARPENTERS AND JOINERS.
WANTED, a thorough, practical, experienced Man as WORKING FOREMAN to a Builder. Satisfactory references required.—Apply to W. ELSTON, No 6, Wormwood street, City.

TO PLUMBERS.
WANTED, a THREE-BRANCH HAND; must be a good workman; there is a good prospect of a constancy to a suitable man. Reference required.—Apply, after SIX o'clock, at 31, Broad-street, Golden-square.

TO ARCHITECTURAL DRAUGHTSMEN, &c.
WANTED, a thoroughly competent Builder's FOREMAN, or CLERK of WORKS, capable of making finished and working drawings, and of taking the entire management of an extensive builder's and engineering business. Apply by letter, stating full particulars, to J. W. 20, Gloucester-place, King's road, Chelsea.

WANTED, a Good DRAUGHTSMAN, accustomed to prepare contract drawings; one experienced in railway work will be preferred. Apply, prepaid, stating qualifications, terms, and references, to C. E. 7, Upper Stamford-street.

ROTHERHAM and KIMBERWORTH LOCAL BOARD of HEALTH. WANTED, by the above Board, a Gentleman of experience as SURVEYOR. The Candidate must have a knowledge of engineering, especially in connection with works of water-supply, drainage, sewerage, and surface-cleansing; competent to conduct surveys, take levels and sections, prepare plans, drawings, and estimates for works of every description, and able to superintend the execution thereof, test the materials, and see to the fulfilment of the conditions of the contracts for executing such works. He will also be required to report upon any new buildings within the district as to their drainage, levels, and other conveniences, and also upon cases of nuisance involving structural alteration for abating the same, and generally possess a thorough knowledge of the repair of highways, and of all the duties required by the Public Health Act, 1848. The whole time of the Surveyor is to be devoted to the duties assigned to him, and he is restricted from undertaking any other employment. Candidates are to state their age, previous occupations, and the salary they would expect to receive, but are not required to attend personally until summoned, and no canvassing will be sanctioned. Applications, with testimonials of qualification and competency, addressed to "The Chairman," must be forwarded to me on or before the 2nd day of MAY next, at TEN o'clock a.m.
By order, JOHN BARKAS, Clerk.
Public Offices, Rotherham, 19th April, 1854.

SMITHS' FOREMAN.—WANTED, an active working SMITHS' FOREMAN, to superintend and assist in a Smith's Shop; he will have to make out costs for estimates, and rough drawings when required. To prevent trouble, not more than 2l. per week will be given.—Address by letter, postpaid, stating qualifications and last employer, to A. B., Headon's News Office, Knightsbridge.

ARCHITECTURAL PUPIL.—Mr. JOHN BROWN, Architect, Surveyor for the county of Norfolk, can RECEIVE into his Office an ARTICLED PUPIL, who could also, if desired, reside with the family.—Upper King-street, Norwich.

PARTNER WANTED.—A Person, who has a practical knowledge of drainage works, wishes for a PARTNER with a small capital, as an excellent chance offers Mr. Fry's, News Agent, Chelmsford, Essex.

TO ENGINEERS AND ARCHITECTS.
A GENTLEMAN, practising in the Country, wishes for a PARTNER; one well acquainted with architecture and cap ble of carrying on the business single-handed would be preferred.—For particulars address A. B. C. 18 Camden-street North, London.

SMALL HOUSE WANTED, rent from 30l. to 40l. per annum. Bayswater or Camden-town preferred.—Address, J. JACKSON, 51, Broad-street, Golden-square.

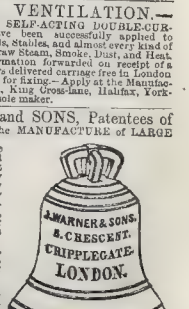
C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Munster street, Regent's-park. 20s. per cwt. given for Old Lead. C. L. begs to call the attention of the Trade, Builders, &c. to his stock of plumbers' closet-basins, plug ditto, brass-work, &c. sheet-lead, and patent pipe-plate, patent plate, sheet and crown glass, white-lead, oils, colours, &c. Glass illuminators for floors or pavements, vaults, &c. in iron frames or not.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond street, and 1, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Tran-parent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

WINDOW-BLINDS FOR THE TRADE ONLY.—The only Blind-maker in London working exclusively for the Trade is WILLIAMS, 1, Rutland-street, Brompton, Manufacturer of every description of useful and ornamental BLINDS, consisting of conservatory blinds, outside shop-blinds, horizontal blinds and awning blinds, executed on the most approved principles lower than any other house. The trade supplied with springs. A list of prices forwarded post free, on application to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

FARMER and CO. Sash, Door, and Staircase Manufacturers.—Counting-house Fittings, Shop and Public-house Fronts on the shortest notice Estimates given for contracts of any description. By enclosing a postage stamp, a list of prices will be returned for any kind of joiners' work, &c. 125, St. John-street-road, and No 1, Edward street, Pentonville.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.
PLANS, ELEVATIONS, DRAWINGS of MACHINERY, &c. lithographed or engraved.
BUILDERS' and CONTRACTORS' ACCOUNT-BOOKS; DRAWING PAPERS; ditto, mounted and continuous; TRACING PAPER and CLOTH; ditto in lengths.
GENERAL STATIONERY, for the use of BUILDERS, ARCHITECTS, SURVEYORS, and ENGINEERS, at the lowest current rates.
WATERLOW and SONS, 63 to 68, London-wall; and 49, Parliament-street, London.
Contracts for the supply of large establishments.



TO ARCHITECTS.
COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architect's Sketch Tours, Ghent, Rouen," &c. and of "London as it is," Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
136, Strand, London.
37, Hyde-park-street, Glasgow
27, Dale-street, Manchester.

HAWKIN'S
PATENT METAL CAPPED AND BRACED PAINTING AND ARTIST BRUSHES.
Manufactory, 17, COLLEGE-HILL, CANNON-STREET, LONDON.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Buildings, as well as to withdraw Steam, Smoke, Dust, and Heated Air from Mines and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and Wheeled ready for hanging. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre,..... }

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCY, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT. This Cement, which has been established many years, is now manufactured on such improved principle that its acknowledged advantages and its usefulness for INTERNAL as well as EXTERNAL purposes are unquestionable. IT NEVER CRACKS, BLISTERS, OR VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, and when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint); that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks as unique. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, of alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON—PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurities in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark, and by Messrs. BLENDELL, SPENCE, and CO.; when ground and dry by Messrs. T. B MORLEY and CO.; and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. wholesale agents, 62, King William-street, City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court New-road, and 80, Upper Thames-street, City; and Liverpool, by Messrs. LAWFORD and CO. of 45, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting, warehouses, dwelling houses, &c. In Leith, by Messrs. R ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of 62 Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and reduces the cost of oil paint. It will not decompose or wash off. For roads it stands pre-eminent, giving the appearance of fine cut stone, and I cwt. will cover 40 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 18s. and 21s. each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, schools, mews, railway stations, &c as a substitute for oil paint, is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price for gallon, ordinary colors; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 2s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS. PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for painting or finished in oil colours. Price 10s. per gallon, which will cover and finish about 100 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent)

CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this innocuous substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, whole sale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

DAMP WALLS! DAMP WALLS!—STENT'S COMPOSITION for PREPARING NEWLY PLASTERED or DAMP WALLS for PAPERING is the result of long duration; it is unfailing in its application. Entire houses have been papered in a short time after the last coat of plaster has been put on. Also for the repairs of old houses its value is great. A moderate room can be prepared for 2s. 6d. Prepared only by Mr. J STENT, Surveyor, Warminster. May be purchased of all respectable Druggists or Paper-dealers for 3s. per quart, or 10s per gallon.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT. 6, South Wharf, Paddington.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality in consideration never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement, does not vegetate, turn green, or crack, combined with which its cement hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and Co. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are respectfully solicited to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, East street, Blackfriars, or Mill's Wharf, Scotland Yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PARIAN CEMENT, for internal use, to be painted in a few hours, and pasered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian lumber cement; and all other Cements in use for building purposes, Nine Elms, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, for natural hydraulic properties which, and the great estimation in which this kind of Lime is held throughout wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for mortar. Orders may be given to Lime Agents, BLYTH, BROTHERS, 18, South Wharf, Paddington, and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, less is used in slaking, and the result is considerably increased.—Engineers, Architects, and Contractors, of the above, in its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seed-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excludes all the cement-loss properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tried at the Institute of Civil Engineers, to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT. Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

ROMAN and OTHER CEMENTS. Manufactured by J. M. BLASHFIELD, successor to the Patentees, PARKER and WYATT, who, in 1796, first introduced PARKER'S ROMAN CEMENT; also Tarras and Portland Cements, English and French Plaster, Terra Cotta Chimney Pots, Trusses, &c.

Manufactory, Mill Wall, Poplar; Depôts, Commercial-road, Lambeth; and Paddington-basin.

ITALIAN POZZOLANA.—A few hundred TONS of this article, of best quality, on SALE.—Apply to G. and T. EARLE, Hull.

WESTMINSTER FIRE OFFICE. Chief Offices—27, King-street, Covent-garden, London. Established 1717.

Rates of Premium moderate
Short period Policies granted.
Rent Insured
Losses promptly and liberally settled.

WESTMINSTER AND GENERAL LIFE ASSOCIATION. King-street, Covent-garden, London.—Established 1836.

Life Assurance in all its branches effected.
Eight-tenths of the Profits divided among the Assured.
A Division of Profits every Five Years.
The Bonus on Policies has amounted to One-half the Premiums paid on the Policies.
Assurances without profits at reduced rates.
Any information respecting either Fire or Life Insurance, with proposals in forms of application, may be obtained on application at the Office.

W. M. BROWNE, Secretary and Actuary.

Agents required in the principal Country Towns.

AMAZON LIFE ASSURANCE and LOAN COMPANY, for LIFE ASSURANCES, ANNUITIES, and ENDOWMENTS.

Head Offices, 1, Ironmonger-lane, Cheapside, London.

EDWARD PARSONS, Secretary.

LOANS.—Persons desirous of obtaining ADVANCES from 50l. to 250l. upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION ASSURANCE CLASSES.—Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars (address 6d. each copy, or 1s per post. Note Four new classes are now in course of formation for London, and will immediately commence operations.

TO BUILDERS AND OTHERS.

MONEY to LEND upon MORTGAGE.—Several Sums of Money ready to be Lent, in large or small sums, upon Mortgage, on freehold or leasehold houses or land, ground-rents, reversions, deposit of deeds, or approved personal security. Also on the PURCHASE of Freehold or Leasehold Houses, Ground rents, &c. Apply, with particulars, to Mr. WRAY, 3, Harcourt-buildings, Temple.

TO CONTRACTORS AND OTHERS.

A PPOLD PUMP and STEAM-ENGINE for SALE.—TO BE SOLD, a capital HIGH-PRESSURE STEAM-ENGINE, of 8-horse power, with two boilers, complete. Also an APPOLD PUMP, capable of raising 2,000 gallons of water per minute, with the driving machinery as attached to the 15 horse engine. Also a MILL for grinding mortar. The whole are in good working condition, and are to be sold cheap, as the works upon which they have been used are finished, and the proprietors have no further use for them. The above may be seen at the new Harbour Works, Shoreham, near Brighton, and prices and particulars furnished upon application to Messrs. EASTON and AMOS, Grove, Southwark.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c.—The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers, of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming street, Pentonville. Pumps and machinery for raising water from deep wells boring tools, and well pipes, for exportation. Men and tools sent to bore for railroads, minerals, &c.

EARTH WAGGON WHEELS.—TO CONTRACTORS.—A number of pairs of WHEELS and AXLES, equal to new, 24 and 30 inch; together with a quantity of wrought iron waggon-work, for SALE, on advantageous terms. Apply Rates Grove Ironworks, Reading.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish, Brushes, and every article in the Trade,

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE,

87, BISHOPSGATE-STREET WITHOUT, LONDON.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company. J. FARRELL, Secretary.

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects Builders, and others (for the purpose of securing the use of the genuine article, to insert in their specifications

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas-tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Roya. Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 37 per cent in fuel is effected. The TRADE are respectfully entitled to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the article in the best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION as the ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Victoria Clock Tower and others lending to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

TO BUILDERS, HOUSE DECORATORS, AND UPHOLSTERERS

THE most extensive assortment of UPHOLSTERERS' CLOTHS, BAIZES, and DRUGGETS, in every shade of colour, width, and quality, at HILL and SON'S, 88 and 89, St. Martin's-line, London.

N.B. Patterns sent if required.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

ASPHALTE PAVEMENT.—HENRY WRIGHT is prepared to lay down his Asphalte Pavement, which is particularly adapted for railway platforms, footpaths, garden-paths, court-yards, and school-yards 2½ in. to 2 in. thick, from 1s. 6d. to 2s. per square yard.—Address, 32, Bucklersbury, City.

TO ARCHITECTS, BUILDERS, AND CONTRACTORS.

THOMAS PRENTICE and CO. being desirous of more extensive orders to lay down the IMPROVED ASPHALTE FLOORS, will make a satisfactory discount to any one securing orders for quantity.—Address, Stowmarket.

No. 1. Floors laid ¾ inch thick, 1s. per yard.
No. 2. Ditto 1 inch thick, 1s. 3d. "
No. 3. Ditto 1¼ inch thick, 1s. 10d. "
No. 4. Ditto 2 inch thick, 2s. 6d. "

Employers to find sand, fuel, carriages, &c.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

MOORE'S PATENT MOVABLE GLASS VENTILATOR, for Windows, Partitions, Factories, Workshops, Warehouses, Greenhouses, Cottages, Stabling, Granaries, and out or Buildings, Railway and Private Carriages, &c. For Farms, Dairies, Outbuildings, &c. the Ventilator can be made to form a complete window, iron frames and rough plate glass, &c. Ventilators made to any size, and to most forms of sashes; also for sky or fan lights, and other purposes. A considerable saving and additional safety by having fixed window sashes.

MOORE'S PATENT "LEVER VENTILATOR" admitting a regular current of air, is calculated to effect all that is required for improving animal and vegetable health. The vitiated air is emitted at the opening left for that purpose. To shopkeepers they are particularly recommended, as from their capabilities of removing the foul air caused by the gas in the shop and windows, they effectually preserve the stock in good condition, and prevent explosion of gas.

Church and House Clock-makers to the Hon. Board of Ordnance, the Russian Government, and the Emperor of China.

Manufactory, Sekford-works, St. James's-walk, Clerkenwell, London.

GOOD 3rds 16 oz. FOREIGN GLASS, in cases of 300 feet each, average size, 40 by 30, at 42s. per case; 4th ditto, 34s. Also 16 oz. ground do. do. 4d. per foot; Crown and 16 oz. Sheet squares, in 100 feet boxes, varying from 14 by 10 upwards, 2½ per foot; 4-inch rough Plate Tiles, 12s. per dozen. Also, Crown and Sheet Glass in crates, British and Patent Plate, Fluted and Stained Glass, Glass Slates, &c. Sheet Lead, Pipe, Wh. te Lead, Oils, Turpentine, Colours, &c.—G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 310, OXFORD-STREET.

EMBOSSED GLASS, &c.—D. NEWTON, Ornamental Designer, Gilder, Writer and Embosser on Glass. Drawings and estimates furnished. Country orders executed with despatch, on the lowest terms, at 30, Tavistock-street, Covent-garden.

PATENT and BRITISH PLATE GLASS JAMES HETLEY and CO. beg to inform Architects Builders, and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured. Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 35, Soho-square, London.

TO GASFITTERS, BUILDERS &c

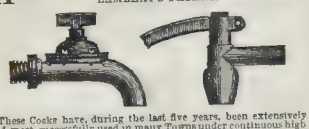
WANTED, a large Glass CHANDELIER for a public concert-room, to burn gas.—Particulars and where it can be seen to be enclosed to Mr. M. J. STUTELY'S Office, 4, Doughty-street, Mecklenburgh square.

PURE GAS.—TO GAS COMPANIES, ENGINEERS, MANUFACTURERS, and OTHERS.

PATENT CLAY PURIFICATION.—No cheap process has yet been discovered for freeing gas from ammonia, and the removal of the bi-sulphuret of carbon (the monster nuisance of gas-burning) has been given up in despair. Clay removes both these impurities, and when taken from the purifiers the bi-sulphuret of carbon is visible, completely blackening the clay. The light of the gas is increased in proportion to its thorough purification. The proprietors of this patent are now ready to grant licenses for its use.—Terms, and directions for the employment of clay, may be obtained from Mr. JOHN WHITTAKER, Agent to the Patentees, Gas Works, Wakefield.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 22.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.

The usual allowance to the trade.

Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

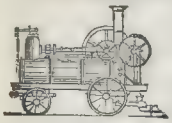
PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4in. to double 12in barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.



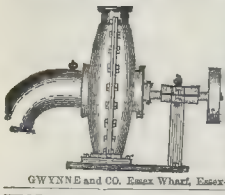
Pumps of any size, single or double barre., up to double 18in diameter, kept ready for use at reduced prices.

N B The above can be worked either by hand, horse, or engine power.

Iron Pails 36s per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground street, Blackfriars Bridge, Surrey Side

STEAM PUMPING ENGINES—PATENT PORTABLE STEAM-ENGINES,



from four to ten horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids to lift or cools to raise, will find it their interest to use these Pumps For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand.

FOR SALE, in consequence of the owner making alterations and requiring more power, a capital 16-horse high-pressure STEAM-ENGINE, and Two Boilers.—May be seen in full work at Mr. W. R. WOOD'S Sawing and Planing Mills, Wandsworth, Surrey.

ENGINES and BOILER for SALE, to be seen at the Atlas Works Company, Engineers, Emerson-street, Bankside, Southwark, an eight and ten horse beam engine; also a second-hand six horse engine and boiler, saw-frames, circular saw benches, and wood planing machines, on the most approved principles The six-horse engine and boiler to be seen at work on the premises.—For particulars, price, &c. address as above.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT

CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump..... £1 15 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing..... 3 0 0

Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers.

JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET, LONDON.

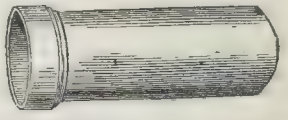
Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade

STEAM BOILERS of every description, Wrought Iron Girder Bridges, Gas Holders, and General Castings, Chains, Cables, and Contractors' Iron Work, manufactured by MELROSE and HUSSEY, Phœnix Works Tividale, near Dudley London Office, 78, Hatton Garden.

JAMES MICHIE, Engineer, Battersea-park, Nine Elms, Manufacturer of all kinds of STEAM ENGINES (portable and stationary), Pumps, Sawing Machines, Cranes, Grabs, &c.

N.B. An 8-horse high-pressure engine for sale.



TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete, strong, simple, for immediate hire use several are ready for delivery, from six-inch two power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs MEDWIN and HALL'S, Engineers and Portable Engine Makers, 92, Blackfriars-road These engines have been successfully employed for years.

STEAM-ENGINES, of various sizes, from two-horse power upwards, always in stock, made on the most improved principles, and of the very best quality; single and double-purchase crabs also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery, made to order by ANDREW McLAREN and CO. Windsor Iron Work, Windsor-terrace, City-road, and 174, Upper Thames-street.

FOR SALE, SIX Second-hand BOILER STEAM-CHESTS; would be suitable for small boilers for steaming potatoes or other vegetables, or for sawing planks for boat-building, &c.—Apply to Mr. SIDDALL, 296, Rotherhithe-street.

THE FARNLEY IRON COMPANY, WORTLEY, near LEEDS.

Manufacturers of FIRE BRICKS, TILES, QUARRIES, &c., White Building Bricks, Fire-clay CHIMNEY-TOPS, in Norman Egyptian, Saxon, Tudor, Grecian, Gothic, and Elizabethan styles.

TERRA COTTA

Fountains, Vases, Pedestals, Capitals, Trusses, Brackets, &c., in great variety, which for beauty and elegance of design are unequalled. The designs of Architects modelled with the greatest exactness.

Also of PATENT GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, &c., well adapted for pressure, being made extra pressed under "Spencer's Patent." Superior White Glazed CLOSET PANS, TRAPS, &c.

The Works of the Company are situated in the immediate vicinity of the well-known bed of WORTLEY FIRE-CLAY, and their manufacture of BRICKS, for the use of Forges, Gas Companies, Foundries, Potteries, and Glassworks, is confidently recommended for all purposes where extreme heat is required. Their GROUND CLAY is also particularly adapted for the manufacture of CRUCIBLES, MELTING POTS, &c.

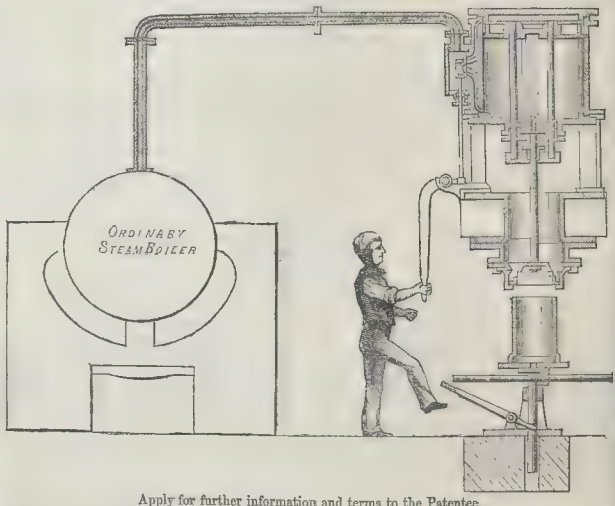
DIRECT-ACTION STEAM-PRESS, SOCKETING DIES,

(These Dies are used without crosses or arms);

DIES FOR HOLLOW EARTHENWARE,



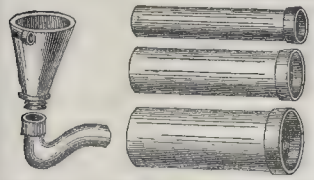
(As Garden-pots, Pans, Basins, Crucibles, &c.);

Bends direct from the Machine, Stilts and Kiln for Vitrifying and Burning;

FOR MAKING

SANITARY TUBES, DRAIN-PIPES, EARTHENWARE,

&c. &c. &c.



Apply for further information and terms to the Patentee,

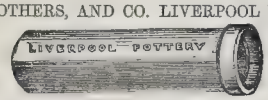
THOMAS SPENCER, PRESCOT.

N.B. Licenses are already granted to parties in London, York, Leeds, Sheffield, Newcastle, Darlington, Birmingham, Liverpool, Wrexham, Edinburgh, Glasgow, and Aberdeen, or their localities.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.



The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and in terror glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danvers's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. DOULTON AND WATTS'S

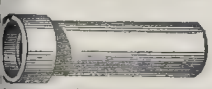
REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

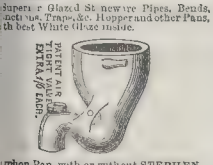
These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

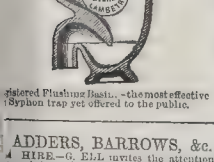


They may also be had turned down.

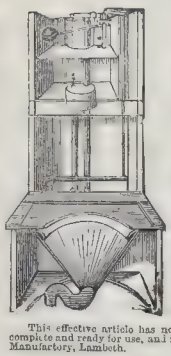
PRICE 7s. 6d. each,



The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.



STEPHEN GREEN'S IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin, the most effective Syphon trap yet offered to the public.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

LADDERS, BARROWS, &c. for SALE or HIRE.

—G. ELL invites the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excavators', bricklayers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.

Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead-road.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

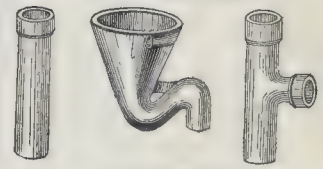
A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipe and sockets, the dies being of a different and better construction than any others now in use, and the pipes and sockets being made by one process are secure from separation.



W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Mill bank. Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—W. TO WATER COMPANIES AND PLUMBERS.

DEVEY and DALE'S CYLINDER BALL-VALVE and BALL, Registered Oct. 28, 1853. No. 3,596.

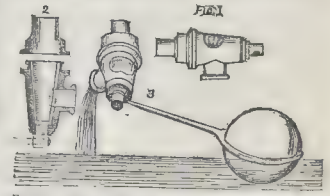

Fig. 1 represents the Cylinder Ball-valve in elevation. Fig. 2 is a Section of the Interior, showing the uninterrupted course of the Fluid: it shows the Cylinder Ball-valve in action.

This Valve is peculiarly suited to High-pressure. The greater the weight of fluid, the more secure the Valve becomes, and the more efficiently it will prevent waste.—Manufactured solely by DEVEY and DALE, 8 and 9, Shoe-lane, and may be had of respectable Plumbers.

STAFFORDSHIRE POTTERY.—

WILCOX, BARNARD, and CO. Earthenware Manufacturers, Mill-wall, Poplar, Cone-basins, urinals, bidet-pans, plug-basins, washhand-tables, beer-machine handles, closet-handles, basin-knobs, &c. toilet ware, fancy jugs, pasepots, &c. white, printed, and decorated, delivered carriage-free to wholesale dealers within five miles of London.

JENNINGS'S IMPERISHABLE

EARTHENWARE WATER-CLOSETS and TRAPS

can be had in quantities at a small advance on the filthy Hopper Pan without water surface.

JENNINGS'S LAVATORY, CLOSET, and other COCKS, SLUICE-VALVES, URINALS, &c. will be found worthy inspection by Architects and Engineers.

JENNINGS'S SHUTTER SHOES, to SECURE SHUTTERS, at HALF THE COST of the unsightly SHUTTER BAR.

See shops in any of the public thoroughfares.

A Book containing Illustrations, Descriptions, and Prices can be had on application, or per Post if two stamps are enclosed to

GEORGE JENNINGS,
ENGINEER AND PLUMBERS' BRASSFOUNDER,
29, Great Charlotte-street, Blackfriars-road.

PAPER-HANGINGS.—The CHEAPEST

HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFREY,

ALLEN and CO. Paper Stainers, beg to call the attention of the trade to their patterns of Papet hangings for the present season, which comprise every description of style and quality, from the most elaborate decoration to the cheapest paper that can be produced, and which they are prepared to offer at very low prices. J. A. and CO also respectfully inform the trade that they have OPENED a WAREHOUSE at No. 500, OXFORD-STREET, where all goods can be obtained on the same terms as at the Factory.

GUTTA PERCHA PAPER FOR DAMP WALLS. J. A. and CO. are the sole vendors of this well-known remedy for Damp Walls.

115, Whitechapel, near the Obelisk, and 500, Oxford-street.

SALES BY AUCTION.

Important Sale of Marble, to MARBLE MERCHANTS, STATUARIES, MASONS, BUILDERS, &

MR. THOMPSON will SELL by PUBLIC AUCTION, on MONDAY, 3d APRIL, 1854, at CARRARA WHARF, THAMES BANK, PIMLICO, at the foot of Vauxhall Bridge, about 120 TONS of MARBLE, consisting of Statuary, Veined, and Sound Blocks, Black and Gold Sienna, Antique, Breccia and Irish Black, of the finest quality and Also, about 6,000 superficial feet of Veined, Sienna, Statuary, and Black and Gold Antique SLAB. May be viewed on the premises the day preceding the Sale; and further particulars had of the Broker, 8, Crescent Terrace, Midlands, London.

Freehold Building Land, beautifully situate at Carshalton, Surrey.

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, opposite the Bank of England, on THURSDAY, APRIL 6, at TWELVE in three lots, all of Two Acres of FREEHOLD BUILDING LAND, presenting frontages to good roads, in a most delightful and healthy situation, about a mile and a half from the Station, and within a few minutes' walk of the Green at Carshalton, which is only eight miles from London. The land lies high, is very dry, and commands most extensive views, and is in a neighbourhood proverbially healthy, and in the midst of good families of position, business, and fortune. The lots will principally be sold for villas, each to be upwards of 200 feet deep, subject to the erection of a mansion or first class residences, which are in great request. May be viewed, and printed particulars with plans, had at the Inns in the neighbourhood, of Mr. Hall, Post-office, Carshalton; at the Greyhound, Epsom; at the Mart, and of Messrs. H. Brown and T. A. Roberts, 22, Throgmorton-street, City.

Oak Timber, Elk-lying Park, Norfolk.

MESSRS. W. KENDLE and SON beg to announce, that they have received instructions to SELL by AUCTION, on MAY next, a large quantity of valuable OAK TIMBER, now standing in Elk-lying Park, Norfolk, and which will be found well worthy the attention of ship-builders, timber merchants, railway contractors, and others. Elk-lying Park is situate on the banks of the River Bure, which is navigable from Acle to the port of Great Yarmouth. Further particulars will appear in due time before the Auction.

TO BUILDERS, CARPENTERS, AND OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, at Rye-lane, Peckham, on TUESDAY, APRIL 4, at TWELVE for ONE, about 150 yellow and white pallets, rails, stiles, battens, &c., of all sizes, feet scantling, yards, and several lots of useful fir-planed doors, quantity of glass, & c. Also, about seven 20l. approved bills at three months' date will be taken in payment.—May be viewed the day prior to the sale, and catalogues had, on the Premises, and at the Auction Offices, Cardington-street, Hampstead-road, near the Euston Station.

THE GROVE, HAMMERSMITH. TO BE SOLD BY AUCTION, by

MR. JOHN BILTON, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, by order of the Mortgagees, on TUESDAY, MAY 2, 1854, at TWELVE for ONE o'clock, (subject to such conditions as may be then produced), SIX substantially-built CARCASSES, situate in the Grove terrace, Hammersmith, held for a term of eighty years from midsummer, 1849, at the low rent of 11l. Christmas rent, and at a ground-rent of 6l. each house for the residue of the term. Also, at the same time and place, by order of Depositees, Two substantial Dwelling-houses and Shops, situate in the Avenue-road. The Grove, Hammersmith, held for the same term, at a peppercorn rent until September next, and at a ground rent of 8l. each house for the remainder of the term.—Particulars and conditions of sale had at Garraway's Coffee-house; of Messrs. Thomas and Son, Pen-court, Pensburch-street; and of the Auctioneer, 31, Great-saint Helen's, Bishopsgate.

TO ENGINEERS, PLUMBERS, BUILDERS, &c.—Capital FREEHOLD PREMISES TO BE SOLD or LET on Lease, Kingston-on-Thames, Surrey.

MR. JOHN DAWSON invites attention to the well-arranged BUSINESS PREMISES, with a good Dwelling-house, and Shop, situate near the Thames in a growing residential town (which also has an iron foundry, and nine years), wherein he has carried on the trade of a plumber, &c., where a large and highly respectable trade has been established for the years, and is now in full operation, to which he can give a valuable introduction. The premises have a frontage to the street, affording a large supply of remarkably pure and soft water, including a hot and cold supply, and rendering this a most desirable yearly tenant. The premises are in thorough repair, and are of a convenient size for carrying on either a wholesale or retail business.—Auction and Land Offices, Kingston-on-Thames, and Marlborough-chambers, 9, Pall-mall.

TO BUILDERS, CONTRACTORS, AND OTHERS. Important and Valuable Freehold Property, Munster Road, Fulham.

MESSRS. BROMLEY and SON have received instructions from Mr. Harry Bunn, the firm retiring from business, to SELL by AUCTION, on THURSDAY, MAY 4th, being the TWELFTH DAY of the month, at the Mart, Tokenhouse-yard, Lothbury, in the City, in the following lots, the whole of the valuable and extensive Premises, situate on the north side of Munster-road, Fulham, and known as the Munster Nursery, comprising a most desirable and compact Freehold Estate, with a frontage to Munster-road of 200 feet, and a depth of 300 feet, and which is now in the occupation of Mr. Harry Bunn, the firm retiring from business, and is well adapted for the carrying on of the business of a builder, timber merchant, or nurseryman, and is also admirably suited for the erection of a number of villa residences, for which there is a great demand in the neighbourhood, and for which purpose it is now being advertised for sale in small lots, with a view to realise the most advantageous price for the same. The Premises will be sold in the following lots, viz.:—

Lot 1. A capital Dwelling-house, with Shop, Counting-house, Stabling, Coach-house, Sheds, Yard, Garden, and Nursery Ground, containing in the whole about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 2. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 3. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 4. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 5. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 6. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 7. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 8. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 9. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 10. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 11. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 12. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 13. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 14. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 15. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 16. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 17. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 18. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 19. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 20. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 21. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 22. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 23. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 24. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 25. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 26. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 27. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 28. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 29. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 30. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 31. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 32. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 33. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 34. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 35. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 36. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 37. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

Lot 38. A Piece of Nursery Ground, containing about 1 acre 1 rood 20 perches, or thereabouts, with a frontage to Munster-road of 100 feet, and a depth of 300 feet.

COMPETITIONS.

MELTON MOWBRAY CORN EXCHANGE and PUBLIC ROOMS. The Directors are prepared to receive DESIGNS and ESTIMATES for a CORN EXCHANGE and PUBLIC ROOMS at Melton Mowbray, Leicestershire, and hereby offer a premium of 20*l.* for the best set of plans, elevations, and specifications, and a further sum of 10*l.* for the second best. The selected designs to become the sole property of the Directors, and the successful competitor will, if duly qualified to the entire satisfaction of the Directors, be entrusted with the carrying out of the design at the usual commission, in which case the first-mentioned premium will merge in the commission. The site, situate in Nottingham street, comprises 1,400 square yards, part of which is at present occupied by considerable range of removable buildings. The whole cost of the erection is not to exceed 1,800*l.* exclusive of such present buildings. The proposed building must comprise—

1. A Corn Exchange, 80 feet long, 40 feet wide, and of height in proportion.
2. A Room for the Savings' Bank.
3. A Newsroom and Library.
4. A Room for Magisterial and County Courts, with Retiring-room attached.

The whole of the building to be heated and properly ventilated. All the drawings to be on a scale of one-eighth of an inch to the foot, and to be sent under motto only to the Secretary, on or before the 26th day of MAY next. The signature to be given in an accompanying letter sealed with the motto, and which will not be opened until the selection has been made. The designs not accepted will be returned. GEORGE MINKLEY, Secretary

Melton Mowbray, April 25th, 1854.

CONTRACTS.

EXTENSION OF TIME.

MILITIA BARRACKS, NORWICH and YARMOUTH. Persons desirous of TENDERING for the above Works, may inspect the plans and specification at the Office of the Clerk of the Works, Mr. JOHN BROWN, Upper Kingstreet, Norwich, on and after the 8th day of MAY next, instead of as previously advertised. Tenders to be endorsed "Tender for the BARRACKS," and addressed to the GEORGE MONEY, Clerk of the Lieutenancy, to be delivered at the Office of the Architect, on or before the 26th day of MAY next, 1854, instead of as previously advertised. The party whose Tender may be accepted will be required to enter into a bond, with two approved and responsible sureties, for the due performance of his contract.

Norwich, April 18, 1854.

TO BUILDERS AND IRONFOUNDERS

Royal Engineer Office, Portsmouth, 19th April, 1854.

NOTICE is hereby given, that TENDERS will be received by the Honourable Board of Ordnance, at their Office, Pall Mall, London, on TUESDAY, the 2nd MAY next, from such persons as may be willing to undertake the per'ormance of the CARPENTERS' and JOINERS' WORK, and the CAST-IRON and METAL Work required at CHRISTCHURCH BARRACKS, from the 15th JUNE next, to the 31st MARCH, 1855, and who may be furnished with the printed schedules of prices, and the conditions of the contracts, with every necessary information respecting the same, by application at this Office, between the hours of TEN and FOUR each day, Sundays excepted. The persons whose Tenders shall be approved, will be required to provide eligible securities and execute a bond for the due performance thereof, and to pay half the amount of the stamp on the bond.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer of the Woolwich District hereby gives notice, that the Honourable Board of Ordnance are about to enter into a SPECIAL CONTRACT for BUILDING a RIVER WALL on the Essex side of the Thames; and that such persons as may wish to Tender for the same may inspect the plan, and obtain a copy of the specification and form of Tender for the work, by applying to Mr. CART-WRIGHT, Clerk of Works, at the Royal Engineer-office, Royal Arsenal, Woolwich, on or before the 10th of MAY, 1854, between the hours of TEN and FOUR. Tenders upon the printed form prepaid, to be delivered at the Office of Ordnance, Pall-mall, London, on the 11th of MAY, 1854, addressed to the Secretary to the Honourable Board of Ordnance, and marked "Tender for Work at Woolwich." The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Woolwich, April 24, 1854.

CONTRACTS.

TO CONTRACTORS.

Royal Engineers' Office, Chatham 20th April 1854.

NOTICE is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, PALL MALL, London, on or before MONDAY, the 8th MAY, 1854, for the performance of the following branches of ARTIFICERS' WORK, for the Ordnance Department, at the following stations, viz.:—Medway District, from 15th July, 1854, to 31st March, 1855, both inclusive, determinable at any time after one year, on either party giving to the other three months' notice in writing, viz.:—

CARPENTER'S WORK, &c.	SLATERS WORK.
BRICKLAYERS WORK.	MASONS WORK.
PLASTERERS WORK.	PAVIORS WORK.

The Stations are—Chatham and its environs, and Brunswick and its entrance, including Tilbury Fort and Shornmead Battery, together with Coal House Point Battery, when completed. Separate Tenders to be made for these Stations as well as for the different trades, as the Contractors may be admitted for all the trades, either in one or more Stations.

Printed forms and schedules of contract may be obtained on application at the Royal Engineers' office, at Chatham; and at Ordnance Office, Pall Mall, on THURSDAY, the 4th MAY, and between the hours of TEN and FOUR o'clock on that day. Tenders to be delivered at the Ordnance Office, Pall Mall, on or before the hour of TWELVE o'clock at noon, on MONDAY, the 8th MAY, and not after that hour.

*** The Board of Ordnance reserve to themselves the right of rejecting any or all Tenders that may be presented.

TO BUILDERS

Royal Engineer Office, Portsmouth, 19th April, 1854.

NOTICE is hereby given, that TENDERS will be received by the Honourable Board of Ordnance, at their Office, Pall Mall, London, on TUESDAY, the 2nd MAY next, from such persons as may be willing to undertake the performance of the CARPENTERS' and JOINERS' WORK required at WINCHESTER BARRACKS, from the 8th of MAY next to the 31st of MARCH, 1855, and who may be furnished with the printed schedule of prices, and the conditions of the contract, with every necessary information respecting the same, by application at this Office, between the hours of TEN and FOUR each day, Sundays excepted. The Person whose Tender shall be approved will be required to provide eligible securities, and execute a bond for the due performance thereof, and to pay half the amount of the stamp on the bond.

TO BUILDERS.

PERSONS willing to CONTRACT for the ERECTION of a HOUSE and OFFICES at GRAFTON in the parish of EDGMOND, may see the plans and specifications on or after the 8th day of MAY next, by application at my office, in Oswestry. Tenders must be sent into me on or before the 17th of MAY. The lowest Tender will not necessarily be accepted. Grafton is distant three miles from the Baschurch Station of the Shrewsbury and Chester Railway, and also nine miles from the Old Woods Station of Stallion, and five miles from the River Severn, at Montford-bridge. R. KYRKE PENSON, Architect.

Oswestry, April 24, 1854.

TO BUILDERS AND CONTRACTORS

PERSONS desirous of CONTRACTING for the ERECTION of a large DWELLING-HOUSE, for Mr. Stapleton Moore, of Brentwood, are informed that the plans and specifications may be inspected at the London and Essex Inn, Brentwood, on and after MONDAY, MAY 1. Also for the ERECTION of TWELVE COTTAGES. Bills of quantities may be obtained, if required, at the same time and place.

N.B. Mr. MOORE does not bind himself to accept the lowest or any Tender.

NATIONAL FREEHOLD LAND SOCIETY.

TRUSTEES.

Richard Cobden, esq. M.P.	Samuel Morley, esq.
Charles Gilpin, esq.	W. A. Wilkinson, esq. M.P.

SURVEYOR—James Wilson, esq.

SECRETARY—W. E. Whittingham, esq.

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

Houses of various classes and values being required to be built on the following estates, namely,—

BARNET,	GUILDFORD,
CAMBRIDGE,	HADLOW,
COLCHESTER (2),	MINSTER,
CROYDON GROVE,	SUTTON,
ENFIELD (2),	ROMFORD,

The Directors will be prepared to receive plans and particulars of houses suitable for the several situations, and Tenders to build the same. Particulars of the Lots to be built upon, the classes of houses required, and the conditions of building, may be had of me personally, or by letter; and the Designs &c. are to be sent in on or before WEDNESDAY the 17th of MAY next.

JAMES WILSON, Surveyor.

14, Moorgate street, London, 22nd March, 1854.

CONTRACTS.

TO BUILDERS AND OTHERS

PERSONS desirous of CONTRACTING for the ERECTION of STORE HOUSES, ARMOURIES, and QUARTERS for Non-commissioned Officers, of the South Gloucester Militia, at Gloucester, on and of the North Gloucester Militia at Cheltenham, may see the plans and specifications at the Offices of Messrs. FULLAMES and WALLER, any time between the hours of TEN and FOUR o'clock p.m. after the 22nd of APRIL. Tenders to be sent in sealed, endorsed "Tender for Stores," and addressed to Messrs. FULLAMES and WALLER, Architects of Gloucester, on or before the 17th MAY to which date full particulars may be obtained.

Gloucester 8th March, 1854.

ROYAL MARINE MINISTRY.—

Copenhagen, 20th March, 1854.—Notice is hereby given, that it has been resolved to CONSTRUCT a DOCK at the ROYAL NAVAL YARD, at COPENHAGEN, for the Repair and Equipment of War and other Ships. Such Work shall be done by Contract. It will be duly announced where the Plans of the Works and the Conditions of the Contract will be exhibited; also when and to whom the Tenders are to be transmitted. By order,

PEDER BIER WILSON, Consul General.

Danish Consulate-General, London, 24th April, 1854.

TO CONTRACTORS FOR PUBLIC WORKS

THE MINISTER of the ROYAL DANISH NAVY will be ready on the 10th day of JUNE to receive TENDERS for the CONSTRUCTION of a DRY DOCK, 425 feet long, 45 feet WIDE, with 4 IRON BRIDGES, and other Works. Plans, specifications, and quantities of these works will be open for inspection on the 1st day of MAY next, at the Royal Danish Navy, at Copenhagen, and at the Offices of Mr. ALFRED GILES, the Engineer, 3, Adelphi terrace, London. The Engineer reserves to himself the right to refuse accepting of his plans in any portion which are not executed similar to works; and the Danish Minister does not bind himself to accept the lowest or any Tender presented to the amount of which will be required for the due performance of the contract.

STEEN BILLE.

The Ministry of the Royal Danish Navy, Copenhagen, 15th April, 1854.

TO BUILDERS

PERSONS willing to CONTRACT for the ERECTION of the NATIONAL SCHOOLS and MASTER'S HOUSE, at Ashtead, Surrey, are requested to send in Tenders, addressed to the undersigned, on or before the 9th day of MAY next. Plans, &c. may be seen at the Schools there, and at the Bridge-street National School, and at the Offices of the Architect, Mr. THOMAS D. BURLAND, 7, Adelphi-street North, Liverpool, to whom Tenders are to be delivered, sealed and endorsed "Tenders for Schools," not later than 12 o'clock on the 9th day of May next. The quantities have been taken out by a competent Surveyor, and will be furnished, on application to the Architect. HOWARD WILLIAMS, Esq.

CONTRACT WANTED for BUILDING a small EIGHT-ROOMED COTTAGE, close to the intended military camp at Ash, near Guildford, Surrey; two railway stations within a mile. Any person, of small earnings, excellent character, and steady habits, may obtain a lease of the land, on which there is a good well of water. There is sufficient room to add two more rooms, if required. Apply on the premises, or to Mr. WEAVER, 124, Strand.

TO BUILDERS

PERSONS desirous of TENDERING for the ERECTION of the proposed NATIONAL SCHOOLS at Bromley, Kent, are invited to see the specification and plans at the office of the Architect, Mr. J. P. ST. AUBYN, 36, John-street, Bedford-row, London. Tenders to be addressed to the Rev. J. E. NAYLOR, Bromley, Kent, and delivered on or before the 10th day of MAY, 1854. The Committee do not bind themselves to accept the lowest or any of the Tenders.

Broml y, May 24th, 1854.

TO CONTRACTORS.

THE DEWSBURY LOCAL BOARD of HEALTH is prepared to receive TENDERS for the CONSTRUCTION of a RESERVOIR at DUNFORD BRIDGE, near to the North End on the Woodhead Tunnel, on the Manchester and Sheffield Railway. The reservoir is to contain forty million cubic feet of water. Plans, sections, &c. may be seen at the Office of WILLIAM RANGER, Esq. C.E. 2a, Pall-mall, London; also at the office of the Resident Engineer, at Dunford Bridge, near and off the 26th instant; and copies of the specifications and conditions may be obtained at my Office, on payment of 1*l.* 1*s.* and after the above date. Tenders, sealed and endorsed, "Tenders for Dunford bridge Reservoir," to be sent, under cover, to me on or before WEDNESDAY, the 10th day of MAY next.

CHAS. OLDROYD, Clerk to the said Local Board.

Dewsbury, April 19, 1854.

LONDON and NORTH-WESTERN RAILWAY COMPANY. OLDHAM BRANCH CONTRACT.—The Directors are prepared to receive TENDERS for the execution of the works of the above contract, which include the CONSTRUCTION of a TUNNEL (1,300 yards in length, and all requisite Excavations, Embankments, Bridges, Culverts, Retaining Walls, Fencing, Approach Roads, the Sleepers, Ballasting, and Lying of the Permanent Way, and all contingencies of every description. The Plans and Sections will be furnished by the Company. Drawings and specifications are now ready for inspection, at the Office of the Engineer, 13, Duke-street, Westminster, where printed forms of Tender may be obtained, and any requisite explanations as to the intended works will be given. Tenders, marked "Tenders for Works, Oldham Branch," addressed to the Secretary, under sealed covers, must be delivered at the Company's Offices, London-road Station, Manchester, not later than Thursday, noon, on the 11th day of MAY. The Directors do not bind themselves to accept the lowest Tender. By order,

CHAS. E. STEWART, Secretary.

[For remainder of Contracts see next page.

CONTRACTS.

TO CONTRACTORS, IRONFOUNDERS, EARTHENWARE, SEWER, AND DRAIN-PIPE MAKERS, AND OTHERS.

NANTWICH LOCAL BOARD of HEALTH.—The Board hereby give Notice that they are prepared to receive TENDERS from competent persons who may be willing to undertake all or any of the following Contracts

CONTRACT No 1. For the MANUFACTURE and SUPPLY of certain CAST IRON SOCKET-PIPES and Appendages to be used in the Water Supply of the Town

CONTRACT No. 2.—For the MANUFACTURE and SUPPLY of certain VITRIFIED EARTHENWARE TAILLE or other Earthenware Pipes and Articles to be used in the Drainage of the Town

CONTRACT No 3. For laying, Jointing and Fixing certain CAST-IRON SOCKET-PIPES and Appendages to be used in the Water Supply of the Town

CONTRACT No. 4. For the Construction of certain BRICK SEWERS, and for the Laying and Jointing of certain PIPES and the Performance of other Works in connection with the Drainage of the Town.

CONTRACT No 5.—For the Formation, Construction, and Completion of FILTER BEDS in duplicate, an Arched Service Reservoir, and other Works in connection with the Water Supply of the Town.

Duplicate copies of the drawings and specifications may be seen and Forms of Tenders obtained, gratuitously, as may be found at my office, Nantwich, and at the Offices of the Engineers, Messrs. BIDDELL and STEVENSON, 7, Duke-street, Westminster, London, on and after the 20th inst and sealed Tenders must be sent to me on or before FRIDAY, the 12th day of MAY next ensuing

By order of the Board,
RICH. C EDLESTON, Clerk to the said Board.

Nantwich, 19th April, 1854

BOROUGH of BIRMINGHAM.—"The Birmingham Improvement Act, 1851."—BIRMINGHAM SEWERS Contract No 23.—To CONTRACTORS for PUBLIC WORKS.—The Public Works Committee of the Council of the said Borough hereby give Notice, that on MONDAY, the second day of MAY next, they will meet at the Council-house, Birmingham, to receive SEALED TENDERS from persons willing to contract with them for the CONSTRUCTION of the following WORKS, viz.:—A MAIN BRICK SEWER, 8000 Feet in length, to be constructed at the Eastern end of the Borough, commencing contract for a portion of the river Rea Main, near the entrance to the Lordy Stables, in Lawley-street, and to be continued thence along Montague-street, across Vauxhall Gardens and land and garden grounds, under the Warwick and Birmingham Canal Aqueduct, and along the bed of the river Rea to Wall's bridge in Lower Easley-street; thence along Lower Easley-street and Milkmaid-street and along the route of the old sewer through Meeting House and Hylton-lane to the Alma Tavern, Nechells, an intended street to be called Rea-street South, thence through an intended street, Dundee and Princess's Lane, Green, Garbett-street and Hope-street; thence across vacant building and meadow land to a proposed continuation of St. Luke's-street; and thence along a proposed new road, to its junction with Balsall Heath-road; as also junctions for branch sewers 1,192 feet in length, side entrances, flushing apparatus, gullins, ventilating-cocks, the breaking up of the old sewers, the connection of the drains at present running into the same with the proposed new sewers and other works connected therewith. Plans, Sections, and Specification of the proposed works may be seen at the Council-house office, from and after TUESDAY next, and TENDERS must be sent in on or before MONDAY, the 1st day of MAY next, where printed forms of application, and sealed Tenders will be received by the Borough Surveyor, at his office, Moor-street, up to noon on the said day. Each Tender must be accompanied by a deposit of £50 in money, or by a Bank Guarantee for that amount, as a guarantee that the party tendering will enter into a bond, with two sufficient sureties, in the penal sum of £1,000, for the due performance of the contract, if his Tender be accepted. The Committee do not bind themselves to accept the lowest or any Tender.

By order of the Committee,
J. PIGOTT SMITH, Borough Surveyor.

Borough Surveyor's Office, Moor-street, April 21, 1854.

BOROUGH of BIRMINGHAM.—"The Birmingham Improvement Act, 1851."—BIRMINGHAM SEWERS Contract No. 24.—To CONTRACTORS for PUBLIC WORKS.—The Public Works Committee of the Council of the said Borough hereby give Notice, that on MONDAY, the 22nd day of MAY next they will meet at the Committee-room Borough Sewers Office, to receive SEALED TENDERS from persons willing to CONTRACT with them for the CONSTRUCTION of the following WORKS, viz.:—A MAIN BRICK SEWER, 1,535 feet in length, to be commenced near the junction of the rivers Rea and Tame, and to be continued thence across meadow land nearly parallel with the river Rea to the overflow from the mill dam, together with ventilating-cocks, open coaster, bridge over river Rea, coast-iron tube over overflow, retaining-wall, and other works connected therewith. Plans, sections, and drawings of the proposed works may be seen at the said-mentioned Offices daily between the hours of TEN and FOUR o'clock, and after MONDAY the 1st day of MAY next, where printed copies of the specification and several conditions to be observed may be had at 2s each. The parties whose Tender may be accepted shall enter into a bond jointly and severally with two responsible sureties in a sum equal to one-fourth the amount of his tender for the due performance of the contract. Any Tender or schedule which is not strictly in accordance with the printed forms of the contract will be regarded as informal. Tenders will be received later than TEN o'clock A.M. on MONDAY, the 22nd day of MAY next. The Council do not bind themselves to accept the lowest or any Tender.

By order of the Board,
J. PIGOTT SMITH, Borough Surveyor.

Borough Surveyor's Office, Moor-street, April 21, 1854.

BOROUGH of BIRMINGHAM.—"The Birmingham Improvement Act, 1851."—BIRMINGHAM SEWERS.—Contract, No. 25.—To CONTRACTORS for PUBLIC WORKS.—The Public Works Committee of the Council of the said Borough hereby give Notice, that on MONDAY, the 22nd day of MAY next they will meet at the Committee-room Borough Surveyor's Office, to receive and open sealed TENDERS from persons willing to CONTRACT with them for the CONSTRUCTION of the following WORKS, viz.:—A MAIN BRICK SEWER, 8,270 feet in length, to be commenced at the Hockley Brook main, about midway between the Aston and Saltley Roads, and to be continued thence along a proposed continuation of Hockley-street, from New Johns-street to Phillips-street, Bloomsbury, Brewery-street, Cattle-market, Bloomsbury-street, Hardman-street (formerly called Love-street), Loveday-street along the course of the present Water-wharf and Phillips-land, Bromley-street and Pickford's premises, Bromley-street, Bromley-hall, Bromley-street, Bromley-hall, Bromley-street, Bromley-hall

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being Plate Lead, and the other pure Zinc: it therefore combines the Softness of Zinc with the Durable Quantities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of a very much greater thickness and weight.

Plumbic Zinc is in no way liable to burning to be more than one fourth or one-fifth as thick as Sheet Lead, in consequent much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about	18	oz.	per foot super.
No. 12 " "	20	oz.	do. do.
No. 13 " "	24	oz.	do. do.
No. 14 " "	26	oz.	do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS, 19, Wigmore-street, London.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE, can be obtained of all IRONMONGERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures in lieu of any kind of hurdles, for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability not to be found in combination in any other kind hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Queen's and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

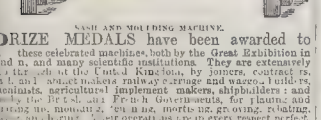
N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gate-head-on-Tyne.
166, Strand, London.
67, Hyde park street, Glasgow.
27, Dale-street, Manchester.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,



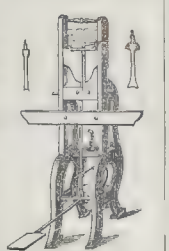
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, beg to the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any other metal.

CHEMISTS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD on the LOWEST TERMS.

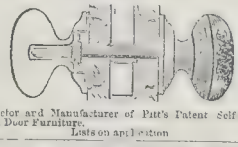
VALUABLE PATENT MACHINES FOR WORKING IN WOOD.



SASH AND MOULDING MACHINE.

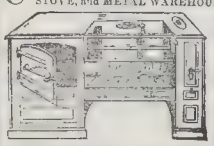
PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, cabinet and wood-turners, railway carriage and waggon builders, pianoforte makers, agricultural implement makers, shipbuilders and others, for the Royal and French Governments, for planing and grooving, moulding, tenoning, mortising, grooving, rebating, shaping, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary operations of wood-working in the best style and in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 20, Lawton-street, Liverpool, from whom full particulars may be obtained.

IRON FOUNDRY, 80, Goswell-street (late of Brick-lane, St. Luke's).—J. J. JONES, having made great additions to his STOCK of PATTERNS begs to inform the Trade that he can now supply them with an Ornamental Iron Casting for Railing, Balcony, Fencing, Palisading, Hurdle, Gate, Verandah, Ornamental Stanchion Panels, Iron Stoves, Grates, Area Gratings, Fly Plates, Bracketing, Palisading, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheel Plates, &c.



Also the following Goods:—Forge Backs and Troughs, Iron Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c., always in stock.

KIMBERLEY'S Patent Mortising Machine, 12l. each
Kimberley's Patent Flooring Cramps, 25s. and 28s. each
Kimberley's Patent Window Stays and Door Springs
Kimberley's Patent Gas Stoves, Ovens, and Ranges
Kimberley's Registered Fancy Brass, and Shakspearian Brass Foundry
Thousands of these articles are now in daily use.
These well-established Articles to be had from ROBINSON, LANGTON, and CO. 7, Talbot-court, Gracechurch street, London; or from the Patentee, Birmingham.



Books of testimonials and references to any extent throughout the United Kingdom can be given.

GEORGE HART, 253, STRAND, Near Temple-bar.
WHOLESALE, MANUFACTURING, AND FURNISHING IRONMONGER.

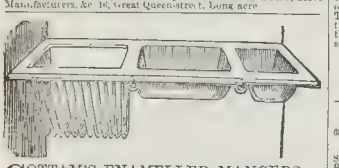
HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boilers, requiring no brick-work; Warm Air Apparatus, &c.—Apply to SPILLER and TAYLER, Engineers, Battersea.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Rogers, delivered at a meeting of the Architectural Society, wherein Mr. Bloxam showed that heating by hot water is truly the only effective system applicable to warming ancient churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation, with a uniform comfortable warmth throughout the largest buildings. Messrs. JOHN WEEKS and Co. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.



HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK: also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace grates, soot doors for the same, hot-water pipes, elbows, tees, syphons, throttle valves, stop cocks, flange and socket elbows, &c.; also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf, No. 6, Bankside, London, near the Stonework-iron bridge.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOILESVE'S PATENT CALORIFERE, evaporating a twelfth of an ounce of cold water, without altering the finest forms or injuring the quality of the most precious articles. The Calorifere works by it-self only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stoves, or wharf-sand are not used thereby considerably reduced by the use of the above. It is in operation at Messrs. Piper and Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vegan, Son, and Raymond, Bookhead, and several bankers, millers, and manufacturers in London and country. Apply, per post to T. BOILESVE, Engineer for French Flour Mills, Turbines, &c. 55, King William-street, City.

PURE WARM AIR STOVES of any power required, from that for a dwelling-house up to a large church, and in many cases equal in the cost as well as in the consumption of fuel than any hot-water apparatus, are erected and their efficiency guaranteed by CUTLER and SONS, Stove Manufacturers, &c. 16, Great Queen-street, Long acre

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal are constructed in the best possible manner, and have all the latest improvements. Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

JOHN WALKER, CORRUGATED IRON ROOF and BUILDING MANUFACTURER,
And GENERAL CONTRACTOR
Works—Mill Wall, Poplar, London; and Gillbrook, Birkenhead,
Offices—Corner of Arthur-street West, London-bridge; late 64, Gracechurch-street.

THOMAS EDINGTON, IRON MERCHANT AND CONTRACTOR, Inspector of Railway Stations and Casinos,
17, GORDON-STREET, GLASGOW.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or cast iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

FIRE—ROBBERY—VIOLENCE—PILLAGE.—MILNER'S HOLDFAST and FIRE-RESISTING SAFES, the strongest safeguards in the world against
EXTENSIVE FIRE IN GLASGOW.
MESSRS. DAVIDSON AND SON.
Gentlemen, At 4 o'clock this morning a fire broke out in a street yesterday, by which my counting-house was destroyed, I owed the preservation of my books to the MILNERS SAFE in which they were kept. The contents of a wall safe were totally destroyed at the same time. You will please send me immediately another "Milner" of the same size as the one I had, being thoroughly satisfied of their safety, after the test I have just seen.
I am, Gentlemen, your obedient servant,
(Signed) JOHN DODDS.
27, Union-street, Glasgow, Feb 22, 1854.
MILNER'S PHŒNIX SAFE WORKS, Liverpool;
London Depôt, 47a, Moorgate street, City

FOUNDRY AND IRON WORKS,
63, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

TO CONTRACTORS, IRONFOUNDERS, and OTHERS.—The Advertisers are wishing to purchase a quantity of CAST IRON SCRAPS. Pieces of castings, too large for putting in the cupola, would not be rejected, but would be bought at their highest value. Apply, either personally or by letter, to Mr SMITH, 283, Oxford street, London.

CAEN and AUBIGNY STONE.—F. FOUCARD, Stone Merchant and Quarry Proprietor, Quai des Abattoirs, Caen, and at 6, Red Lion-street, Borough-market. Contracts taken for any quantities. Cargoes shipped to order from Caen to any port.

GATES and GEORGE, late LUARD, BELDHAM, and Co., Caen, Autigny, and General Stone Merchants, Caen Wharf, Rotherhithe, London. Goods delivered to order, by land or water conveyance, and by ship to any part of the United Kingdom.

BANGOR WHARF, King's-road-bridge, Camberwell-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet pans, and traps, Welsh fire-bricks, grate, and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge. Office, 8, Crescent-terrace, Millbank, Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARRIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to

TO BUILDERS, MASONS, AND CONTRACTORS.

OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Extensive Works, Earl-street, Holywell street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

SERPENTINE MARBLE of choice quality ON SALE, in blocks and slabs, at moderate prices.
THOMAS JACKSON, Commercial road, Pimlico.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verde antique, &c. Portland, Bath, Chilli, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention, that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing mills, Cambridge-heath, Hackney. WM. HUSTLER, Proprietor.

J. B. WHITE and BROTHERS beg to draw the attention of Marble Masons and others to their large Stock of Vein and Sicilian Slab, the finest in London.—Millbank-street, Westminster.

ABERDEEN and PETERHEAD POLISHED GRANITE.—Chimney-pieces, Monuments, Columns, Pedestals, Vases, Monumental Urns, &c. executed on the shortest notice, and at the lowest possible prices, on application to JAMES WRIGHT, Manufacturer, 112, John-street, Aberdeen; or A. and F. MANUELLE, Granite Merchants, 13, Trinity-square, Tower hill, London.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of the finest quality, in the largest blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have also executed the French Museum, Ante and Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Hertfordshire and Hertfordshire, the Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street, also by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marble the PATRONAGE OF HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his process, in which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronize his estimable invention, to assure themselves that they are supplied from his manufactory, as unfortunately "LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear. N.B. The Tariff for 1854 is now ready.
Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Lining, Skirting, Roofing, Malting Floors, Patent Ridge and Roll, and Slab-work generally. Exported without detention, a large stock of slates and manufactured goods being usually kept on hand. Price-lists may be had upon application, either personally, or by post.—Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate works, Bermondsey-wall, London.
N.B. Wharf opposite the Wapping Entrance of London Docks.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
(DEPOTS.)
Great Western Railway Station.... PADDINGTON.
Great Western Railway Station.... BRISTOL.
Hope-street, Mount-pleasant ..... LIVERPOOL.
Castle-fields ..... MANCHESTER.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto: rubbed and tooled sills; Harehill and self-faced slab; rubbed York paving; pipes, pots, &c. all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge-wharf, City-road.—Established 1801.

CAEN WHARF, ROTHERHITHE.—GATES and GEORGE beg to invite the attention of Builders, Paviors, and Stone Merchants, to their stock of YORKSHIRE PAVING, and general assortment of stone goods, which are offered at the current prices, and on their usual terms of credit.

RUBBED YORK PAVING.—A large quantity FOR SALE, at Bridge-wharf, Millbank, Westminster.

BATH STONE.—HENRY STONE begs to inform Builders, Contractors, and Others, that he still continues to supply the best BOX HILL GROUND, and Lodge Stile COMBE DOWN STONE, on the most reasonable terms.

H. S. also begs to call particular attention to a Quarry he has lately opened on Hampton-down, near Bath, where he has some beds of Soft White Stone, of a very superior quality, and adapted for either exterior or interior purposes.

Ashlar and Sawn Range Stone cut to order. Cargoes shipped and delivered to any part round the coast.

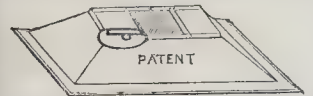
Residence, Widcombe, Bath.

BATH STONE DEPOT, BOX STATION.—ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scalliet Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stone-work for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-park-basin

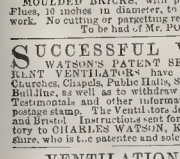
A PORTLAND-STONE ELLIPTIC PORTICO, with steps, &c. complete, is FOR SALE. It has Fluted columns and is much enriched: is adapted for a large mansion, and is as good as new.—May be seen at the residence of the late Duke of Brunswick, Wandsworth-road, near Nine Elms.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.



TWO superior descriptions of GRAVEL, one for Concrete and the other for Road-making, may be had upon application at the Office of the Park Estate, Plumstead, near the Royal Arsenal, Woolwich. Price 2s. 6d. per yard. Delivered into barges alongside Woolwich.

GRAVEL.—TO BE DISPOSED OF, about 500 Yards of excellent clean GRAVEL, fit for roads or concrete (part screened). Inquire on the Premises, No. 28, Piccadilly.



SLATE-SAWING MACHINE.—FOR SALE, a very superior large-size SLATE-SAWING and GROOVING MACHINE, on the self-acting principle; requires only one man to work it, and will cut 12 inches of thick slate per minute.—Can be seen, and particulars had, of C. T. CHRISTIE, Millwright and Engineer, and Inventor and Manufacturer of the Improved Self-acting Slate Sawing Machines, 19, Broad street, Lambeth; and 113, Vauxhall-walk.

POWERFUL SCREW JACK.—TO BE SOLD, a SCREW JACK, with 3½-inch screw, on the best principle, together with the remaining stock and implements of a Builder, either in a lot or separately to suit purchasers.—Apply to C. J. KNIGHT, 3, Devonshire-street, Bishopsgate.

IMPROVED CONSTRUCTION of CHIMNEYS, by building in a Contractor and Register at the commencement of the Flue—covering in the Flue at the top and inserting Mouth-pieces for the horizontal escape of the smoke.

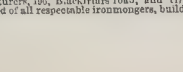
The CHIMNEY CONTRACTOR and REGISTER is Iron. The Register acts horizontally, and when the Chimney is not in use admits of being perfectly closed. It is of easy action, cannot get out of order, and is cleanly, as there is no space for the deposit of soot. By this mode the Register of Stoves is done away with, which formed a complete harbour for soot, and occasionally ignited, so that it was not only dirty but dangerous; and it may be added, that by detaching the register from the stove, greater scope for clearance and design will be given in that article. A Chimney-bar is required where the openings exceed 2 feet 3 inches in width.

The HORIZONTAL MOUTH-PIECES for the escape of smoke stand out before the external surface, are so formed as to divert the wind, and prevent down draught. The covering in the flues at the top abolishes the chimney pot, keeps the flue dry, and preserves the stoves from injury.

Contractor and Register, each, 15s.

Mouth-pieces, per pair, 5s

To be had of the Manufacturers, Messrs. PARRY & SON, 165, Golden lane, St. Luke's.

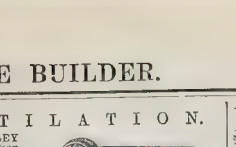


MOULDED BRICKS, with perfect Quarters, for Circular Flues, 10 inches in diameter, to bond in with the general Brickwork. No cutting or pargetting required.

To be had of Mr. POCOCK, Battersea.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every Kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing. Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.



Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 105, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

VENTILATION.

D. and E. BAILEY beg to call the attention of Architects and others to their improved

CIRCULAR ARNOTT VENTILATORS,

which are more sightly than the square ones in general use, much less liable to get out of order, and the flaps, being hung from the top, do not admit any smoke caused by down draught.

Price, bronzed, from 6s. 6d.

D. and E. BAILEY, 272, Holborn.

BRICK-MAKING MACHINES.—CLAYTON'S PATENT.—To CONTRACTORS, BRICK-MAKERS, and EXPORTERS

TESTIMONIALS.

"Bury, Lancashire, April 11, 1854

"SIR, In reply to your inquiries respecting the working and results of your Patent Brick Machine, I beg to say it entirely meets with my approbation, and does more work and better than I expected; I am now making upwards of 19,000 per day, with a set of men that never worked in a brickfield before, or even saw the machine; in another week's practice, I hope to get 3,000 more out of it per diem; I have no hesitation in saying it is the best machine extant, and I intend ordering another. Send me one of your Patent Brick Presses, same size mould as before.

"I am, Sir, yours respectfully,

(Signed) "JOHN R. FRITH, Contractor."

"To Mr. Henry Clayton, London."

"Ayuho, Northamptonshire, April 19th, 1854

"SIR,—We have been working your Patent Brick Machine with one horse, for the last month at intervals, and have made a large quantity of superior bricks. We are satisfied with the simplicity and strength of it, and have no doubt it is capable of fulfilling all your statements respecting it.

"I am, Sir, yours respectfully,

(Signed) "JAMES BROWN,"

"Mr. H. Clayton, London."

"Manchester, April 18th, 1854.

"SIR,—Numerous brickmakers and contractors in this neighbourhood having asked our opinion of your Patent Brick-making Machine (with a view of establishing the same machinery in their own establishments, if found economical and efficient), and hearing there was one at work so near us we have much pleasure to inform you (and through you many of our friends who value our opinion) that we have this day seen your machine in full operation at the yard of Mr J. Jn. Frith, Bury, Lancashire, which does its work admirably, producing bricks of a quality most decidedly superior to those made by hand labour, and is now turning out nearly 20,000 per day, with a set of men which we found were almost strangers to a brickyard—thus further proving the value and simplicity of your invention.

"We are, Sir, yours, &c.

(Signed) "RICHMOND, CHANDLER, and CO.

"Agricultural Engineers."

"To Mr. Henry Clayton, London."

The above Machines may be inspected, and Illustrated Catalogues obtained, at the Manufactory, Atlas Works, Upper Parkpiace, Forest-square, London

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 WHARF, Maccle-field-street North, City-road Basin. Secondly, that the trade term, "TERRO-METAL," is the sole property right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 681, of the Great Exhibition, on the Manufactories known so long as "The Potteries," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS.

MAW and CO. send free, per post, their NEW BOOK OF DESIGNS,

with prices, adapting this most durable, economical, and decorative species of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient building.

BENTHALL WORKS, near Broseley, Shropshire.

Specimens at 11, Aldersgate-street.

GREAT EXHIBITION 1851, Class 27, No. 111.—JAMES LUFF, Manufacturer of all kinds of Ornamental Bricks and Tiles, Red and White, of the best quality, suitable for chimney-shafts, ridge cresls, cornices, and mouldings of every description, STUDENHAM, IPSWICH

N.B. Builders furnishing detail drawings can have all sorts of ornamental designs executed; a small additional charge made for the moulds.

BRICKS! BRICKS! BRICKS!—PARK ESTATE BRICKFIELDS, near the Royal Arsenal, Woolwich. Price for the present Month, and until further notice:—Stocks, 8s.; Place, 9s. per thousand. Ready money on the field.

February 20, 1854. L. DAVIS, Proprietor.

BRICKS from COWLEY and KENT. Also WHITE, YELLOW, and RED FACING BRICKS. BLUE VITRIFIED BRICKS; Fire Bricks, Lumps, and Tiles.

CHARLES RICHARDSON, 6, SOUTH WHARF, PADDINGTON.

WHITE, SUFFOLK, and RED FACING BRICKS, Kent, Grey Stocks, Malm Fronts, Shippers, &c. Apply to Mr. W. ALLAWAY, 4, Catherine court, Tower-hill.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

BRICKS and DRAINING TILES.—A large quantity of the above are now ON SALE, consisting of excellent hard burnt Stocks, Seconds, &c. Also deep-coloured well burnt red bricks, suitable for facing or other purposes. Agricultural draining tiles in any quantity. Apply on the premises, at the Eastwood Brick and Tile Works, adjoining the goods station of the Eastern Counties Railway Company, Brentwood, Essex. The above materials will be placed, free of extra charge, into the trucks of the Railway Company on the siding which enters the works, at the goods station, and will be forwarded to any of the stations on the Eastern Counties or North Eastern lines at 1s. per ton per mile, 1,000 bricks being considered as equivalent to 2¼ tons.

BRICKS, PANTILES, &c.—J. and C. ANDREWS, Wisbech, Cambridgeshire, beg to offer BRICKS at 35s. per 1,000, PANTILES, at 45s. 6d. per 1,000; FLOOR BRICKS and 6-inch PAVINGS, at 40s. each prices—Delivered at Bishopsgate Station, London. All kinds of DRAIN-PIPES.

HOUSE ASHES and BREEZE and GAS ASHES FOR SALE, in any quantity.—Apply to J. A. SMITH, Great Northern Wharf, Fore-street, Lambeth. ONE MILLION of BEST KENTISH GREY STOCKS ready for delivery, by barge, at a low price, for cash.

BURNT BALLAST for SALE at Parkhouse, Barnsbury, is 6d. per yard.—Apply to Mr. WRIGGLESWORTH, on the ground.

TO BRICKMAKERS AND CAPITALISTS

TO BE DISPOSED OF, on advantageous terms, the LEASE and PLANT of a BRICKFIELD, now doing a good business.—For particulars inquire of Mr. JOSEPH SAWYER, Accountant, 173, Fenchurch-street, London.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest and the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in hand for export.—South-wark-place Wharf, Bankside

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices as under, for cash.

MURRAY'S BRITISH CLASSICS. The new Volume of this Series of Standard Editions of English Authors for the Library, CHEVALIER JOHN'S Life and Principles, Works, and Writings of Lord the Art of Printing Work, will be ready early in May.

Albemarle-street.

THE FREEMASONS' QUARTERLY MAGAZINE AND REVIEW is Published, price 2s. 6d. A Specimen Number will be sent free of Postage, on receipt of Six Postage Stamps to cover the cost of postage. No. IV. for April, published

this day, at the Office, 6, Kensington-street; and R. SPENCER, 314, High Holborn.

PROFESSOR JOHNSTON'S CHEMISTRY OF COMMON LIFE

No. V. is published this day, price 1s. 6d., of

"THE CHEMISTRY OF FERMENT."

Also Part I. (which contains Nos. I. to IV.), price 6s. 6d.

1. The Air we Breathe.—2. HOW We eat and drink.—3. The Soil we Grow in, and the Food we get from it.—4. The Bread we Eat.—5. The Beef we Consume.—6. The Beverages we Infuse.—7. The Sweets we Extract.

The above Parts are also issued in one handsome volume, bound in cloth.

WILLIAM BLACKWOOD and SONS, Edinburgh and London.

And of all Booksellers.

PEOPLE'S EDITION.

This day is published, in 8vo. price 5s. cloth,

ALISON'S HISTORY of EUROPE, from the Commencement of the French Revolution to the Battle of Waterloo.

To be completed in 44 Parts at 1s. forming 12 Vols. price 6s. each, bound in cloth.

WILLIAM BLACKWOOD and SONS, Edinburgh and London

Sold by all Booksellers.

This day is published, the Second Volume of the

WORKS of SAMUEL WARREN, D.C.L.

Being Vol. I. of

TEN THOUSAND A-YEAR.

To be completed in Two Volumes, price 6s. each.

WILLIAM BLACKWOOD and SONS, Edinburgh and London

Sold by all Booksellers.

This day is published, in 8vo. price 12s.

THE COLONIST'S and EMIGRANT'S HANDBOOK to the METHODICAL ARTS, containing House Construction, House Arrangement and Conveniences, Carpentry and Joinery, Smith's work, Roofing, Roof-covering, Exterior and Interior Furnishing.—Blacksmithing.—Painting, Mortars, Concrete, Cements, Building of Lands.—Fences, Road Making.—Wells, Making, Farm and Agricultural Buildings

By PETER BURGIN, Engineer.

Illustrated with 250 Engravings on Wood.

"We do not suspect any thing in which the most valuable and important condensations of practical and useful knowledge for emigrants and colonists that have been written; and not for these alone, but for small landholders, farming steadmen, and mechanics themselves, at home as well as in the colonies."—*The Builder.*

WILLIAM BLACKWOOD and SONS, Edinburgh and London

Just published, with Views, price, in cloth, 5s. 6d.; or large paper, 10s. 6d.; proofs, 21s.

DESCRIPTIVE and HISTORICAL NOTICES of NORTHUMBRIAN CASTLES, HOUSES, and ANTIQUITIES.

By WILLIAM SIDNEY GIBSON, Esq. F.S.A.

Third Series of Engravings.—Views in Newcastle Lanes; Priory and Close, Carlisle; in Cumberland, the Ruined Monastery of Lanercost, Priory, and Nunnery; in Durham, Bishop Middleham, and the Town of Hartlepool; Newcastle on Tyne, and Durham Cathedral.

London: LONGMAN, BROWN, GREEN, and LONGMANS

The Second Edition, with Additions and an Index, 8vo. 12s. post free price 13s. 6d.

AUTOBIOGRAPHY of B. R. HAYDON, Historical Painter. Edited, and continued to his Death, from his own Journals.

By TOM TAYLOR, M.A. of the Inner Temple, Esq.

"It is but just to say, that no work of the kind ever before has possessed the great interest, whether as a contribution to the criticism, history of art, or as a work, more especially, of the first half of this century, or as an illustration of high moral truths, enforced by a terrible conclusion. In either point of view its value can hardly be overrated. We have had the mortified pain alike part over its pages, and learn from it to sympathize with and pronounce that Tragedy can perform that high and delicate task in a manner which does him the highest credit."—*Art Journal.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 8vo. price 2s. 6d.

AN ESSAY on the RELATIONS between LABOUR and CAPITAL.

By C. MORRISON.

London: LONGMAN, BROWN, GREEN, and LONGMANS

TO ARCHITECTS AND BUILDERS.

A COPY of PUGIN'S EXAMPLES of GOTHIC ARCHITECTURE, containing 214 Plates, 3 vols. in excellent condition. Published at 12l. 12s.; to be sold for 4l. 4s.

TO THE CABINET AND UPHOLSTERY TRADE.

SMEE and SON'S NEW BOOK of DESIGNS of CABINET FURNITURE, containing more than 40 designs, together with a Book of Prices, is now ready for the Trade. To be obtained only of SMEE and SON, Wholesale Cabinetmakers and Upholsterers, 6, Finsbury-place South, London.

NEW PATENT LAW (15 & 16 Vict. c. 83).

The CIRCULAR of INFORMATION, with full particulars as to the reduced expense and facility of protection for inventions for the United Kingdom, and foreign countries, may be had gratis by any applicant, or a letter, post paid, to Mr. PRINCE, Patent Office, 4, Trafalgar-square, Charing-cross, London.

BUILDING LAND TO LET, at very low ground-rents for one or more years, close to Regent's-park, and have a frontage of 70 feet to Prince's-hill, New Finchley-road, for the erection of eight-roomed houses, for which there is a great demand in that locality, and would readily let or sell. There are plans for two sizes of houses, for which a number of houses, also some with great depth behind, where work shops or public establishments might be erected.—For plans and particulars apply to F. BILOART, 9, Harrington-square.

FREEHOLD BUILDING LAND at TWO KENSAL GREEN, close to the Church and Station, with 1,000 feet frontage to Kingston New-road, and with private access to the Canal, for the erection of Building Land fronting the Canal, on plans to be approved and restricted, and will be LET or SOLD in parcels, to suit the convenience of buyers.—Apply, for plan of the ground and further particulars, to JAMES CLARK, 74, Bolton-street, Piccadilly. N.B. About three acres of the ground consist of a productive well-stocked walled garden, with a large range of substantial forcing houses.

GROUND TO LET, for Building, in the parish of SHOREDITCH, at the rear of Messrs. Belling Land's Distillery, Queen's-road Dalston, in Plots, which will be put to sale by Mr HARRIS, at the Counting-house on the Estate; and in the parish of ISLINGTON, at Grove road, near the Clock House, Holloway, in Plots, which will be pointed out by Mr. GREEN, at the Counting-House, on the Estate.—Apply for particulars, as above, or to Mr. BUGBIRD, Solicitor, 34, Graham-street, Guildhall.

BUILDING LAND TO BE LET, at AUD'S HOMERTON, WIMBLEDON, CHELSEA, near to the NEW CEMETERY, and near new CROYDON (within a mile of the Station), and at NORWOOD within three minutes' walk of the Station, and LOWER NORWOOD, near Tulse Hill, admirably situated for the purpose. For particulars apply to Mr. W. PHILLIPS, Solicitor, 67, Wimpole-street, Cavendish-square. Lease direct from the Freeholder. Money advanced if required.

NORWOOD.—BUILDING LAND TO BE LET, within three minutes' walk of the Norwood Station in Wimpole (hereafter to be called Lincoln) Road, South, built, with a full view of the Crystal Palace and Grounds, and only one mile distant, south in aspect, within one of the most magnificent views in the county of Surrey, on which building has commenced, and houses nearly completed for occupation, close to a chapel. The roads are substantially made, and the water of the South Lambeth Company is on the premises. Plans, and particulars of terms, may be had of Mr. DIXON, Auctioneer, Surveyor, and Land Agent, 9, Great Tower-street, City. Cabriolets are upwards of forty times stop at the Norwood Station during the day. Leases direct from the freeholder.

FREEHOLD LAND at Homerton, suitable for a manufactory or fourth-rate houses, TO BE LET or SOLD on moderate terms. 150 feet frontage by 3 feet 4th. Apply to Mr. BELLS, 5, Great St. Helen's, Bishopsgate, and Cassland-road, Hackney.

BUILDING LAND TO LET for 99 years, situate at Haverstock Hill, Hampstead, near the Railway Station, fronting the third and fourth roads, the ships on part if required. The sizes of house may be large, and further particulars obtained on application to Mr. GRINDLE, 12, Bath-place, Williamstreet, Caledonian-road; or to Mr. SULLY, at Messrs. Vincent and Davis, 2, Paper-buildings, Temple.

TO BE LET, a large SITE for BUILDING, fronting the road from the Crystal Palace to the West end, five miles from the City, and commanding a charming neighbourhood covered with houses of the best character. For particulars apply to Messrs. PANNON and SON, Laurence Pountney-hill.

CLAPHAM.—To BUILDERS and Others. TO BE LET or SOLD, FOUR newly erected, well built, HOUSES, with large gardens, in this favourite locality. Rent, 40*l.* per annum, or the lease if such house-term, sixty-four years to be sold for the small sum of five guineas. Also Two Carcases, to be sold for 15*l.* each, one-half of the purchase-money may remain on mortgage.—Apply to Mr. CARPENTER, Solicitor, 3, Elm-court, Temple.

TO BUILDERS AND OTHERS.

TO BE LET or SOLD, the LEASE of extensive PREMISES, suitable for carrying on a large business, with 10-horse power steam engine, and saw-mills, workshops, driving sheds, stabling for horses, large yard and dwelling-house in the premises. For particulars inquire of EDWARD TAYLOR, 1, Rodney buildings, New Kent-road.

FREEHOLD BUILDING LAND TO BE SOLD, beautifully situated, within a few minutes' walk of the Carshalton Station of the London, Brighton, and Epsom Rail way Surrey, which is now in course of completing a series of great and leading improvements, by the immediate vicinity of great extent of perfect frontage, by 200 feet deep, price 12s. per foot, or in larger lots at a proportionate sum. The land is suited to handsome villas, mansions, or any other purpose requiring a healthy situation.—Apply to Messrs. BROWNE and ROBERTS, 22, Throgmorton-street.

TO BUILDERS.

TO BE LET on LEASE, most eligible BUILDING PLOTS, for small houses; ground-rent moderate; roads and sewers made; money advanced if required.—Apply to Mr. F. W. TURRANT, Holland-place, Kensington.

MOST Eligible BUILDING LAND TO BE LET, Kingsland, Chelsea, adjoining West Brompton near the intended station of the West London Railway, and about ten minutes' walk from Pimlico, commanding views of great extent and beauty, in Lots of the best frontage, by 200 feet deep, price 12s. per foot, or in larger lots at a proportionate sum. The land is suited to handsome villas, mansions, or any other purpose requiring a healthy situation.—Apply to Messrs. BROWNE and ROBERTS, 22, Throgmorton-street.

NEAR the VICTORIA-PARK.—Building Ground (well drained) TO BE LET in the vicinity of the above, suitable for first-class houses and shops; term, eighty-five years; money will be advanced if required.—For particulars apply to Mr. WILSON, 27, Brunswick-place, City-road.

VALUABLE BUILDING SITE of SIX ACRES on the RIVER THAMES.—TO BE SOLD or LET on BUILDING LEASES, together or in plots, 6 ACRES of FREEHOLD LAND, at Hampton-wick, on the river, between Teddington Lock and Kingston. This is well worthy the attention of capitalists, being adapted, from the advantages of its situation and soil, for any building purpose whatever.—Apply to THOMAS JOHNSTON, Esq. Solicitor, 5, Raymond-buildings, Gray's-inn.

BROCKLEY-HILL PARK ESTATE, close to the Forest-hill Station, on the Brighton Railway. TO BE LET, in Building Lease, for ninety-nine years, FOUR SEMI-DETACHED ROUND, at the corner, and eight plots, each presenting a frontage of 30 feet to the road, and a depth of 100 feet, on which a pair of semi-detached villas are to be erected to the satisfaction of the Surveyor. Apply at the Offices of GEORGE MORGAN, Esq. 5, Cannery-lane.

BRIGHTON.—A most eligible SITE for TWELVE HOUSES, part of a bold crescent, TO BE LET on building lease, a moderate ground-rent. Two-thirds of the amount will be advanced on mortgage. Apply at the Office of GEORGE MORGAN, Esq. 5, Cannery-lane.

WORKSHOPS, MANUFACTORY, or WAREHOUSE TO BE LET, in a first-rate business position, suitable for a builder, sculptor, pianoforte maker, or other trade. Apply to Mr. FOSTER, Bricklayer, Millbank, Westminster.

TO FREEHOLD LAND SOCIETIES.

ABOUT THIRTY-THREE ACRES of valuable BUILDING LAND on Sudbrook Hill, adjoining the Railway, and within half-a-mile of the Richmond, Putney, South Western Railway, TO BE SOLD.—Apply to Mr. P. WELLS, House Agent, near the Church, Surbiton Hill, Kingston, Surrey.

THE ST. MARGARET'S ESTATE, RICHMOND.—The magnificent Mansion and pictures of Park at ST. MARGARET'S, opposite Richmond Gardens, may be viewed, and cards, for admission, obtained, by the nobility and gentry, on the days of the Thames has been fixed for WEDNESDAY, the 7th of JUNE. Cards will be forwarded on application to CHARLES LEWIS GRUNEISEN, Secretary, Offices, 3, Norfolk-street, Strand, April 15, 1854.

OPENING of the CRYSTAL PALACE, 1854.—It is intended to Open the Crystal Palace and Park at the end of MAY, after which they will be open Daily, Sundays excepted.

The following are the arrangements for the admission of the public:—

FIVE SHILLING DAYS.—On Saturdays the public will be admitted by payment at the doors, to tickets of 5s. each, and by tickets to include conveyance by railway.

HALF-CROWN DAYS.—On Fridays the public will be admitted by payment at the doors, to tickets of 2s. 6d. each, and by tickets to include conveyance by railway.

SHILLING DAYS.—Mondays, Tuesdays, Wednesdays, and Thursdays will be shilling days. At these a payment of a shilling will admit the public, or tickets entitling the holder to admission to the Palace and Park, and also to conveyance along the Crystal Palace Railway, from London-bridge station to the Palace and back, will be issued at the following prices:

Including first-class carriage	2s. 6d.
Including second ditto	2s. 0d.
Including third ditto	1s. 6d.

CHILDREN.—Children under twelve years of age will be admitted at half the above prices.

SUNDAYS.—The Palace and Park will be opened on Mondays, at Nine o'clock; on Tuesdays, Wednesdays, and Thursdays at Ten o'clock, a.m.; and on Fridays and Saturdays, at Twelve o'clock, and close every day an hour before sunset.

OPENING DAY.—The opening will take place about the end of May. The precise day will be announced as early as possible. On that occasion season tickets will be admitted.

SEASON TICKETS.—Season tickets will be issued at two guineas each to admit the proprietor to the Palace and Park on the day of opening, and all other days when the building is open to the public.

Season tickets, to include conveyance along the Crystal Palace Railway from London-bridge to the Palace and back, without further charge, will be issued at four guineas each, subject to the regulations of the London, Brighton, and South Coast Railway Company, by which these tickets will be available only for trains from London and the Palace, on such days as it is open to the public, and will not be available for any intermediate stations.

Non-transferable will be transferable or available except to the person whose signature it bears.

FAMILY SEASON TICKETS.—Members of the same family who reside together will have the option of taking season tickets for their own use, with or without railway conveyance, on the following reduced terms:—

Families taking two tickets will be entitled to 10 per cent. discount on the gross amount paid for such tickets; taking three tickets, to a discount of 15 per cent.; taking four tickets, to a discount of 20 per cent.; and for six tickets and upwards, to a discount of 25 per cent. Families claiming the above reduction on obtaining them, it must apply in the accompanying form; but this regulation will be available only to the persons named in such application. Printed forms of application may be had at the Office, 3, Adelaide-place, and at the other offices for tickets.

Season tickets will entitle to admission from the opening day till the 30th April, 1855.

Applications may be made for season tickets at the Offices of the Company, 3, Adelaide-place, London-bridge. Season tickets, as soon as ready, will be delivered in the order in which the applications have been made, at the offices of the Company, 3, Adelaide-place, London-bridge, and 2, Regent-street; and at the Crystal Palace; also at Mr. Sams', 1, St. James's-street; Mr. Mitchell's, Bond-street, Westerton's Library, Knightsbridge. The tickets to include conveyance by railway will be delivered at the office of the Secretary of the Brighton Railway London-bridge.

SPECIAL REGULATIONS AND BYE-LAWS.—All the general provisions and regulations mentioned above are to be understood as being subject to such special provisions, regulations, and bye-laws on the part of the Railway Company and the Palace Company as may be found necessary, from time to time, to regulate the traffic, and to meet special occasions and circumstances which may from time to time arise.—By order of the Board, G. GROVE, Secretary.

Adelaide Place, London-bridge, April 13, 1854.

FORM OF APPLICATION FOR FAMILY SEASON TICKETS.

To G. Grove, Esq. Secretary, 3, Adelaide-place, London-bridge.

Sir,—Be good enough to forward me [ ] Family Season Tickets for myself and the following members of my family, who are all residing with me.

Yours obediently,

Name .....
Address .....
Designation .....

Christian Name.	Surname.

SCHEDULE OF PRICES OF FAMILY SEASON TICKETS.

WITHOUT CONVEYANCE BY RAILWAY.		INCLUDING CONVEYANCE BY RAILWAY.	
Two tickets	£3 16 0	Two tickets	£7 11 6
Three	5 8 0	Three	10 14 6
Four	6 15 0	Four	13 9 0
Five	7 17 6	Five	15 15 0
Six	8 16 0	Six	18 18 0
Seven	11 0 6	Seven	22 1 6

Nine	14 3 6	Nine	28 7 0
Ten	15 15 0	Ten	31 10 0

Note.—The above application must be addressed to the Secretary, as above named, accompanied by a remittance for the full amount of the tickets asked for, according to the above schedule, in favour of GEORGE FASSON, 3, Adelaide-place. Cheques must be drawn on a banker, and be crossed with the words "Union Bank of London." And no application, unless so accompanied, will be attended to.

PURE GAS.—TO GAS COMPANIES, ENGINEERS, MANUFACTURERS, and OTHERS.

PATENT for the PURIFICATION of GAS.—A cheap process has yet been discovered for freeing gas from ammonia, and the removal of the bi-sulphuret of carbon (the monster nuisance of gas burning) has been given up in despair. Only remove both these impurities, and when taken from the purifiers the bi-sulphuret of carbon is visible, completely blackening the clay. The light of the gas is increased in proportion, to its thorough purification. The proprietors of this patent are now ready to grant licenses for its use; terms, and directions for the employment of clay, may be obtained from Mr. JOHN WHITAKER, Agent to the Patentees, Gas Works, Wakefield.

The Builder.

SATURDAY, APRIL 29, 1854.

WITH respect to the discussion of the drainage question at the Institute of British Architects, we had proposed delaying our report until its close. The occurrence of the Easter recess and of the general meeting, however, will prevent the renewal of the subject for a time, and we therefore proceed to give some particulars of what has been already said. After the reading of the paper, on the first evening,—

Mr. Garling (Fellow) said he considered pipe *sewers* to be both defective and unscientific for the metropolis or for any large town, as the sewers for such places ought to be large enough to enable workmen to enter, and examine and cleanse them. A 12-inch pipe sewer had been lately made in Hatton-garden about 1,000 feet long, intended for the drainage of the houses as well as for the surface. This size he considered vastly too small, even to carry off the water from the area it was constructed to drain. For in a thunder storm, such as sometimes occurred, and which, therefore, ought to be provided for, sufficient water might fall in one hour to fill such an aperture completely full for a length upwards of three miles long. The liability to fracture of pipes used as *sewers* was another objection to the system for the drainage of any large city, from the difficulty of ascertaining the exact place of the defect. The drainage of houses by pipes, assuming a separate drain to each, was less objectionable; but even in house drains a pipe 6 inches bore was not ordinarily large enough. He thought there could be no doubt that small drains became stopped up much more frequently than large ones; and he believed that the water ordinarily flowing in from closets and sinks was not sufficient to cleanse the small drains commonly used. He knew an instance of a small drain, only 10 feet long, which was connected with a 4½-inch soldered soil and rain-water pipe, being choked up for some months, notwithstanding there was a head of water standing 45 feet high in the pipe, and when the drain was opened the water flowed from the opening like a fountain, spouting up 7 or 8 feet, and yet it had not been able to force its passage through this short length of small drain. Again, there was an absolute necessity for the admission of air into drains or the water would not flow: this may be by an air-vent having communication with the external air as high up as possible, to avoid smell, or else with the sewer, which latter some might think strange. Pipes should always have proper flanges at the junction bedded in brickwork in cement. One objection to pipe drains was, that in case of a defect it was difficult to discover its exact position without breaking up perhaps the entire drain, or great part of it; and therefore a cemented brick drain, or a drain covered with slate or stone, was preferable in that respect; and this remark of course applied equally to pipe *sewers*. With regard to back drainage he quite agreed with the arguments urged by Mr. Boulnois; and a further objection was to be found in the fact that what was an area or a back garden at present, might hereafter, and perhaps very soon, be built upon, and converted into a house or warehouse; and, therefore, a drain properly placed there as an external drain at one time, would afterwards become an internal one. Nearly thirty years ago he had himself advocated in a public journal many parts of the system recently proposed. He had then declared that no sewerage whatever ought to go into the Thames at any place above Grays; that on the north side of the river there should be a main sewer—say from Chelsea to Grays Reach; that at or about Chelsea there should be large tidal reservoirs to be filled at high water, and at about two-thirds ebb this water should be used occasionally for the purpose of flushing the sewers; and that two large reservoirs should be formed at Grays, apart from all dwelling-houses, where the sewerage should be alternately, first in one and then in the other, decomposed by chemical means, and removed in barges.

Mr. Haywood, surveyor to the City Sewers Commissioners, with reference first to the question of main sewers, stated, that he was not a thoroughgoing advocate for brick sewers alone, having himself used and intending still to use pipes; but he did so only to the extent to which, in his opinion, pipes might properly be applied, and not to the extent of the telescopic system, as it might be termed. And in this he differed with many advocates of the tubular system. He considered that every town should be judged of by its own conditions, and that the main streets of all towns of ordinary size should have sewers large enough for men to enter, the minor streets being left to the judgment of the engineer. It was necessary that sewers, or ducts of some kind, should be provided for carrying off rain-water or storm-water, house drainage and subsoil drainage: the latter was a most important point, because a dry basement was a most invaluable advantage; and it was almost as important that a house should be dry as that it should be free from smells. The question of the best mode of accomplishing all the desired objects was in reality how this could be most economically performed, for it might be done in two or three ways. Some persons advocated three sets of sewers for this purpose. He thought, however, that as a new theory could not be tested for many years, until it was so, a brick sewer, large enough for men to enter, which had been found to answer all the purposes, as being the most simple, was the best. He was convinced that a brick sewer would be found to answer every purpose that could be effected by two or three sets of pipes. Sewers ought to be monumental in their character, and if constructed in our day, none of us ought to expect to see them replaced by new ones. A sewer, whether of brick or pipe, so small that a man could not enter it, should never be employed in such a street. That brick sewers would drain the subsoil effectually might be illustrated by the fact that throughout the city generally they had been able to lower the surface of the water in the gravel as much as 6 or 8 feet; and the basements of many houses, which twenty-five years ago had been almost useless, were now available for the stowage of the most costly materials, such as silks and other goods, and numerous other purposes. He believed the rateable value of the property thus gained was not less than from 20,000*l.* to 30,000*l.* a year. He had built about 120 or 130 pipe sewers, and having used extreme care in their construction he had only had one breakage. With regard to the breakage of pipes, of course that could be obviated, as it would be very easy to make pipes strong enough for all purposes, and the breakage of pipes could not be well alleged as a reason for not using them. He had had two or three trifling stoppages in his pipe sewers, and recently there had been one of a serious nature in Leadenhall-market, a place, the surface of which, of course, could not be broken up with impunity, or without causing great inconvenience. He had opened the sewer in three places, in a length of 135 feet, but had not broken the pipes. It was doubtful whether that sewer could ever be restored to its integrity again. If he might be permitted to allude to published books, he would refer to a blue-book which contained a diagram of the sewer in Holborn, which was within his jurisdiction. In the first place the sewer in this diagram was placed upside down; and further it appeared that a diagram was shown to a witness, who was asked two or three extraordinary leading questions, with a view to show that the brick sewer in Holborn was five or six times the necessary size; because a pipe of the size shown would carry off all the water of Holborn; but the party had forgotten, or probably did not know, that it was intended to carry off, not only the Holborn water and foul matter, but that of a large area adjacent. There was a curious general advocacy of the tubular system in this blue-book, with a vast amount of theorising on this subject, which, if it proved anything, would prove that a 2-inch pipe was large enough for any house of a moderate size. The size, however, of a drain, must be determined by practice. Ventilation of sewers was absolutely necessary, otherwise they would ventilate themselves into the houses. The plan of ventilating into the centre of the street, although a bad one, was, perhaps, the best that could be adopted at present, as it brought the stream of foul air where it could be the easiest diluted and carried off. With regard to ventilating by the rain-water pipes, he had found it to answer, although many complaints were made of smell being perceptible in the houses through such mode of ventilation: where the foul air had been conveyed above the chimney-stacks, it appeared in certain conditions of the atmosphere that the effluvium descended again. This was rather a medical question whether it would be better to ventilate in the centre of the street or by the people's dwellings, and for himself he was in favour of employing flues; and he thought that a compulsory measure (such as appeared to be getting fashionable), to make manufacturers allow the use of their flues and tall chimneys for the purpose of ventilating the sewers, might be introduced with advantage; but he said nothing as to the justice of such a measure. Back drainage in this metropolis, he considered, would be fraught with the greatest inconvenience.

In resuming the discussion at the following meeting, the hon. secretary read a communication from Mr. Thomas Morris, architect, suggesting the applicability of syphon sewers to at least the surface drainage, so as to enable the rain-water flowing from high situations to be passed through depressed localities, and finally discharged at the level of some given channel. The writer said he suggested some years ago to the Commissioners of Sewers, that after the water had been allowed to find its way down to a suitable level by the simple law of gravitation, means for its further progress should be provided by pipes, similar to those of the water companies, which, within limits of height well known to every architect, would allow of such undulations as the intervening surface might require.

Mr. Bazalgette, the engineer to the Metropolitan Sewers' Commission, after some observations on statements in this journal, on the tone of which we have already commented, proceeded to set forth his views at considerable length. He said, without entering upon a crusade against pipe sewers, he would state what the Commissioners of Sewers, with his entire concurrence and recommendation, were now doing. During the last year they executed about twenty-two miles of public brick sewers and six miles of pipe sewers, whilst private individuals had executed about twelve miles of brick sewers, and about eighty-five miles of pipe sewers and drains,—making a total of nearly thirty-five miles of brick sewers, and nearly ninety-two miles of pipe sewers and drains. This statement would show that the Commissioners did not advocate any exclusive system, but that, under certain circumstances, and for minor branch sewers, they considered pipe sewers advantageous. The old practice of brick sewers led to a large expenditure, but did not end in failures, nor produce disease; whereas if the use of the modern pipe was carried beyond its proper limits, failures and obstructions occurred, together with an amount of injury to the public health, which could not be estimated by pounds, shillings, and pence. Some of the new theorists on drainage announced their systems as the most "economical and efficient;" but "the cheapest and best house in London" was generally neither the cheapest nor the best; and a system of drainage which might be most expensive in the first instance might be the cheapest in the end. It had been strongly asserted that pipes, or small sewers, were self-cleansing, whereas large or brick sewers had a sluggish flow, and became, in fact, merely elongated cesspools. He could state most positively from experience that this was not the case. It was true that some of the large sewers in London were not self-cleansing, but this was because they were situated in low and flat districts, with their outlets pent up for eight hours at a time by the tide; but from their size they were easily entered

and cleansed by workmen, and certainly pipe sewers in the same situations would allow deposit to be made in the same ratio. In fact, taking the best and most modern forms of brick and pipe sewers of the last ten years, and laying them side by side with a tolerable fall under exactly the same circumstances, he could assert that the self-cleansing powers of both would be equal. The representations in "Blue Books" of brick sewers half filled with deposit were drawn from old sewers without sufficient water flowing through them, many of them now abandoned, and were not fair representations of the existing state of the London sewers. All sewers became in time covered internally with a slimy surface, which produced an equality of smoothness between bricks and pipes, and in execution the bottom of a brick sewer could be made more uniformly smooth, and consequently less likely to create an obstruction than a pipe with numerous joints. Comparing 4-inch with 6-inch pipes, the speaker applied the theory of the proportion of area to frictional surface, and contended that the scouring power in the former when three parts full would be practically the same as in the latter when half full; and that the 6-inch pipe had an advantage in allowing small substances to pass, which in the smaller pipes would remain and become the nucleus of an obstruction. It had been said that many towns were successfully drained by small pipe sewers. Now he had been directed to visit some of these places, namely, Barnard Castle, Tottenham, Rugby, St. Thomas's, Exeter, and Sandgate; and he found that the pipes had been laid down only two or three years, and in no case had the drainage been completed, whereas it was obviously necessary to have the experience of a system for at least five to six years before it could be called successful. Again, in those towns which were represented as entirely drained by pipe sewers, he found there was the former system still in use for surface and subsoil drainage; the modern one, of pipes, draining the houses only. At Sandgate two-thirds of the main lines had required to be taken up in consequence of stoppages. On the subject of combined back drainage he admitted that there were circumstances in which it might be economical and advantageous; but as a general rule applied to London, it would be neither the cheapest nor the best system. Whether separate or combined house-drainage were adopted, a sewer in the middle of the street for the surface drainage was essential in all large towns, whatever might suffice from mere country roads; and this point, though it materially affected the question of economy, had been overlooked by the advocates of back drainage. In the separate drainage system, each house-drain could be probed from the common sewer, without interfering with the adjoining houses in any respect. He further adverted to the difficulty arising from the conflicting interests of different owners, which would prevent the removal of obstructions without the exercise of the legal powers vested in the commissioners; and likewise referred to the frequent erection of workshops or warehouses in the rear of houses, which would render back drainage further objectionable. As to the breaking of pipe sewers, he was of opinion that the manufacture of pipes had been greatly improved, and that they might be made strong enough to bear any amount of pressure; although, of course, the cost was increased by the additional thickness. He considered the half socket as the best kind of joint. As to the ventilation of sewers, he found that pipes from them carried above the roofs of houses were liable to the escape of effluvium by leakage, or that the smell was brought down to the windows by eddy currents in certain states of the atmosphere. He believed that a system of ventilation by furnaces, as adopted in mines, would be the best plan; but that in the meantime the present system of ventilation, through gratings into the middle of the street, was the best plan that had been practised.

Mr. Burnell, C.E. was sorry to observe that Lord Shaftesbury had praised in the House of Lords the system of sewerage adopted in Paris. The fact, however, was, that there was no sewerage, in one sense of the word, in that city: and although a few houses and hospitals were said to have their sewage conveyed into the main drains, this practice rendered private parties liable to heavy penalty, which the municipality rigidly enforced. The whole extent of the main drains executed in Paris up to the year 1852 was about ninety miles, whereas the Commissioners of Sewers in our own metropolis had executed thirty-five miles in one year. All the sewers of Paris were large enough to allow a man to enter, the bottoms were segmental, and the minimum fall was about 2 in 1,000. But in Paris there were cesspools beneath *every house*, and although great care and superintendence was exercised in their construction, and excellent materials were used (*meulière and hydraulic lime*), the filtration from the cesspools was so considerable that the well waters had been pronounced by chemists to be unfit for the ordinary purposes of life. Any person who had walked the streets of Paris at night could not have failed to discover that all these cesspools were necessarily opened occasionally. Mr. Burnell added, that it was too much the practice in Blue Books and with Boards of Health to assume when any convenient phrase or formula had been hit upon that it expressed a fact. Thus the terms "self-cleansing sewers" and "sewers of deposit" had been much used; but a sewer was a passive object, and consequently these expressions were as erroneous in grammar as they were repugnant to common sense. The expressions "hill-top" and "valley" water were exposed to the same comment. The Board of Health had laid it down as one of these *formulæ* that 80 gallons of water per diem should be allowed as a proper supply to each house, but at Croydon 200 to 500 gallons had been given to each house to carry out the cleansing of these, so-called, self-cleansing small tubular drains.

Mr. T. H. Wyatt, V.P. with reference to small pipe drainage, produced a portion of deposit of *fat* fully 1½ inch thick, which had attached itself to the inner circumference of a 6-inch glazed earthenware pipe, laid about two years ago at St. Luke's hospital, and completely stopped the free passage of the water and flooded the front area. This deposit was found at a distance of more than 200 feet from the scullery, where gratings and a trap had been introduced to catch any extraneous matter: with the exception of the sinks and boilers in the scullery nothing drained into these pipes but rain water and the overflow from a large tank at the commencement of the drain. These 6-inch pipes had been taken up and larger ones laid down. He quite agreed with the last speaker that in matters like that under discussion, it was a frequent error to take stereotyped *dicta* for ascertained facts; and it was a dangerous fashion to circulate cut and dried plans for drainage, schools, churches, and parsonages, as applicable for *general use*, instead of dealing with *each individual* case as its own circumstances and peculiarities demanded.

After some desultory conversation,

Mr. Doulton, visitor, expressed his regret that views of the most opposite nature, and carried to the greatest extent in each direction, had been expressed by the advocates of the different systems of drainage. Thus they had at one time been told that there was no necessity for brick sewers at all, and at another that it was extremely improper to lay a 12-inch pipe under a carriage way. Again, a 4-inch pipe was said to be sufficient for any house drainage, and soon afterwards it was acknowledged that though a 9-inch pipe might be sufficient, a 12 inch pipe would be better. At first, pipes were made exceedingly and injudiciously thin, but now it was contended that a 12-inch pipe should be 1½ inch thick. It appeared to him that the truth lay midway between these extremes. The same remark applied to the diagrams of the drains and sewers. In the Blue Books there were illustrations of brick sewers which would almost prevent any person building a brick sewer again, while some of Mr. Boulnois's drawings showed such representation of defects and stoppages in pipes as would deter any one from laying down a pipe again: indeed, he believed these drawings would have produced a very erroneous impression if the apparent facts had not been modified by the remarks of Mr. Hayward and Mr. Bazalgette. The former gentleman had distinctly stated that the use of pipes was a great and most important improvement in drainage operations. The pipe system, like all other novelties, had energetic supporters, whose enthusiasm might be pardonable; and although pipes had been injudiciously applied, it would be most unscientific to conclude that it was not desirable to use them as sewers. Mr. Boulnois had stated that pipe sewers in the metropolis had failed, but the remarks he made appeared to be rather in contradiction to the deductions he drew from them. He admitted that pipes had been laid with efficiency, but all that he had said seemed to bear against the introduction of pipes at all, at all events, except under special circumstances. Considering that the pipe sewers had been so recently introduced, that they were laid under very disadvantageous circumstances by persons unacquainted with the proper mode, and that many persons were prejudiced against them as a novelty, he thought it wonderful that there had not been more stoppages than had actually occurred. He attributed those stoppages to the defective way in which the pipes had been laid. Why a concrete foundation should be applied to brick and not to pipe sewers he could not imagine; and if concrete had always been applied to the latter, as it was now, he believed the occasional sinking would have been prevented. Mr. Haywood had very properly stated that pipes could be made of any required strength, and engineers and architects were to blame if they did not stipulate for a proper amount of strength. As soon as the rage for cheapness which existed a year and a half ago had subsided, the pipes were made thicker, but of course the cost was increased in proportion; and it should be borne in mind that excellence in the manufacture was more essential than mere thickness, the thickest pipe not being always the strongest. A 12-inch pipe, 1 inch thick, if well vitrified, would be stronger and better than if its thickness were increased to 1¼ or 1½ inch, as the manufacture and burning would be better with the inch thickness. Experience had suggested many improvements in laying the pipes, and the failures bore but a small proportion to the amount of pipes laid. Pipes were now being laid with great prudence and judgment in such a way that they might easily be approached from side entrances and examined, and they were laid in straight lengths, and not upon the intricate system adopted two years ago. He did not consider the porous nature of brick to be favourable for the formation of the slimy coating to which some value had been attributed: the vitrified internal surface of the tube would be more certain in its effects. In conclusion, he had observed that however various the theories expressed by different persons, their practice was very similar, inasmuch as those who most strongly advocated the pipe system occasionally used brick sewers, whilst those who advocated brick sewers frequently laid down pipes. This, at all events, was the result of his own experience and observation.

Mr. Christopher, Fellow, differed with Mr. Bazalgette as to the greatest amount of deposit being found in old and abandoned sewers. In his own district (Hammersmith) there were two main sewers. One of these, which had only been constructed ten years, was frequently liable to most serious deposit, and had now been for three months in course of emptying by hand labour, being filled up to two-thirds of its capacity by solid deposit. The other was an older sewer (3 feet 6 inches), and, although there was a large flow of water down it occasionally, it also was being emptied. Mr. Bazalgette's theory as to the scouring power would not apply when a deposit had been formed; and the cleansing he had referred to absorbed the whole local sewer rate of 6d. in the pound, with the exception of a small margin for staff, &c. leaving nothing whatever towards constructing new sewers.

Mr. Bazalgette stated that he had intended his remarks to be of general application. The sewers of London for the most part were clean where they had a tolerably good fall, and a moderate quantity of water passing through them, and if the road drift could not be carried away, they might be kept clear by raking. It was plain that the sewers mentioned by Mr.

STAIRCASE FROM THE SEBALDS KIRCHE, NUREMBERG.

Christopher had not sufficient fall in proportion to the quantity of water passing through them to make them self-cleansing, and pipe sewers in the same circumstances would be constantly stopped up.

Mr. Pocock, Fellow, said that in the question of sewers, as in other affairs, only practical men knew how and when to modify the theory, as modified it must be occasionally. The frequent changes and interruptions which had occurred in the proceedings of the bodies having the management of the sewers, even when they were going on satisfactorily, had tended to impede rather than to promote improvements. He proceeded to narrate a case in which he was concerned where he had erected at different periods two sides of a square. In the first instance he applied to the Westminster Commissioners for permission to put in a 3 feet 6 inch sewer, which he thought large enough to drain thirty-six houses, and seeing no prospect for years of getting any outlet to the south, he proposed to connect this sewer with another to the northwards; and although certainly this was not the most direct way to the Thames, the Commissioners would not have objected to draining a level surface as he proposed, if it had not been for the opposition of an energetic theorist in the board, who would not listen to the proposition, simply because the new sewer was to the north of the Thames, and, therefore, as he contended, *must* drain directly towards it. The consequence was, that the board, after several years' delay, spent a considerable sum to lower a 2 feet 6 inch sewer, into which he had to drain his 4 feet 6 inch sewer (the size insisted on) through an intermediate 1 foot 6 inch barrel drain. When the reign of this body had come to an end, he erected sixteen houses on the other side of the square, and again proposed a 3 feet 6 inch sewer, but now nothing would do but a 9-inch pipe! This, however, he resisted, and was fortified by one of the contractors, who said he would advise him to have cesspools rather than a pipe sewer. He resisted the board until his tenants complained, when he urged them to complain of him to the Commissioners, and the result was, that they gave way, and he put in the 3 feet 6 inch brick sewer. Generally, although a 6-inch pipe would make a very good house drain, he thought it was impossible to use a pipe for a sewer in a public road, with either economy or efficiency.

On the suggestion of Mr. Fowler, Fellow, the further consideration of the question was adjourned, with special reference to the subject of *outfall*.

STAIRCASE FROM THE SEBALDS KIRCHE, NUREMBERG.

THE well-known Church of St. Sebald, with its far-famed shrine, has been well illustrated by Heideloff and others, but we never recollect to have seen a sketch of the picturesque little staircase shown in the engraving. The workmanship is coarse, and probably of later date than the rest of the church,—but the whole composition shows us an ingenious way of getting over a difficulty. A. B.

ON A COMMONPLACE HOUSE.*

BEFORE passing on to the æsthetical part of the question, we must notice two subjects on which our knowledge is still in an imperfect state—*Warming* and *Ventilation*.

We warm our rooms by means of large, open fireplaces. This is the English custom, and the architect, whether he think it the best way of attaining the object or not, must comply with that custom. Three questions immediately arise:—1. The size of the grate containing the fuel; 2. the size of the chimney-opening; and 3. the size of the flue which is to carry off the smoke. These, as far as I know, are nowhere systematically investigated. At first sight, it appears that the size of the grate ought to bear some definite proportion to that of the room; yet there are various circumstances to modify this conclusion. Combustion goes on more rapidly where the quantity of fuel is great; and perhaps the proportion to the cubic contents of the room ought to be determined rather by the quantity consumed than by that contained at one time in the grate. Again, in large rooms, we do not want an absolutely proportional fire. If the inhabitants are few, they enjoy its warmth by getting near to it; and if they are many, they contribute to the general warmth. On the other hand, large apartments usually belong to larger houses and richer people; the warming will therefore be required to be more complete, and the warmth gained by habitancy will be less; for the average number of people in a large room is by no means in proportion to its cubical contents. Besides, the rich man breakfasts in one room, dines in another, and spends his evening in a third; while one who is less favoured by fortune, may perhaps pass the whole day in one room; and the continuance of the fire will in some degree compensate for its want of intensity. How far these opposing considerations may balance each other, I cannot decide; but as far as my observation goes, I should say that one cubic foot of fuel would be sufficient to warm 6,000 feet of space, and I estimate that a grate which would contain 1,296 cubic inches of fuel within its limits, might be considered as containing ⅓ more when moderately heaped up; that is, it would contain the required amount of one cubic foot, and be adapted to such a room as that we are now considering, taking the height at 13 feet. If instead of iron at the back and sides, the stove has them of fire-stone, or of brick, a smaller space would be sufficient; and fortunately we have greatly at our command the keeping up a strong or weak combustion in our management of the fire.

It seems that the channel to carry off the smoke and vitiated air ought to bear a fixed proportion to the quantity of fuel consumed in a given time. We have so long been accustomed to have the flues cleaned by climbing-

* See page 196, *ante*.

boys, which made it necessary to have a large flue even to the smallest apartment, that this question has not had the attention it deserved. I should have no doubt that a flue of 1½ brick, or 11½ inches square, would be amply sufficient to carry off the smoke of one cubic foot of coal, and consequently would be large enough for a room of 6,000 cubic feet of space: perhaps it might be less. Experience is wanting to furnish any accurate data on which to found our calculations. I prefer a square flue to one of a brick and a half by a brick, because it is more effectually cleaned by the brush; and I do not think the necessity of using, on this account, a few three-quarter bricks a matter of any consequence. Half this area, or about 63 square inches, is sufficient for the immediate opening of the register-stove, where the smoke is very much hotter, and the draught stronger, than in the general course of the flue; but the exact proportion that this opening should have to the flue, and whether it should have any relation to the height of the shaft, are questions that, as far as I know, have never been mooted. It is probable that the makers of stoves and grates have some sort of established proportion between this opening and the size of the receptacle for fuel.

While, as we have just seen, it is usual to make the opening immediately above the fire smaller than the continued flue, the opening at the top of the shaft from the flue into the open air is also contracted. The theory of this is, I apprehend, that the mass of heated air, being confined in a smaller space, moves with greater force and rapidity, and is better able to withstand the action of any cross-currents of air. If, however, a smaller orifice is adequate to the discharge of the smoke at each end, a question naturally arises, whether this smaller size might not be advantageously continued through the whole length of the flue. There are two objections to this: first, that the friction of the moving air against the sides of the funnel must retard its progress; and, secondly, that the larger space affords a receptacle for the smoke, when the continually-changing action of the wind might otherwise drive it into the room below. Both these reasons show that the upper contraction, as well as the lower, should be very limited in extent. If a tube 10 feet long is found advantageous, it is probable that a flue very little larger than the tube, or perhaps not at all larger, might be employed for the whole length.

It would seem, on these principles, that if a room of 6,000 cubic feet require a flue of 126 square inches, one of 2,000 feet would only require one of 42, or about 6 by 7. There are, however, some modifications to be attended to, both as to the capacity of the grate and the size of the flue. There is always something lost in the circumference of the fire: the ignition of the sides is not so complete, at least for a continuance, as that of the centre. This would imply, in addition to the observations before stated, that the grate in a small room ought to be somewhat larger in proportion than that in a large one; and with a small fire, the heat is less, and the draught less rapid; and also, the smaller the flue, the greater is the comparative friction. Perhaps we may conclude that the proportion of the grate to the room may always be nearly the same, but that the proportion of the flue to the grate should be greater in small rooms than in large ones.

IT is not enough, however, to get rid of the vitiated air; we must likewise provide a supply of fresh air to occupy its place; and this is connected with the still more obscure subject of ventilation. There is no doubt that, with a plentiful supply of air, the draught in the chimney would be much more perfect, but the quantity of air absolutely necessary to support a fire is much less than might at first be supposed. We have imagined a room of 6,000 cubic feet, and assumed that the chimney-flue in such a case should offer in its section an area of 126 inches. The air to fill this flue must come in at the doors and windows, both being shut, and the circuit of the door and the space between the sashes in a well-built room, will not offer a tenth part of that area. This seems to indicate a much greater size in the flue than is absolutely needed.

Generally speaking, however, the supply of air is not so great as would be desirable, and various schemes have been resorted to, to supply the deficiency, without occasioning any unpleasant draught in the apartment. These schemes may be reduced to five. Cold air introduced at bottom; cold air introduced at top; warm air introduced at bottom; warm air introduced at top; and air introduced immediately to the fire. Cold air at the bottom has not, I apprehend, succeeded. A flap in the bottom of the door, or a space left between the door and the sill, introduces unpleasant draughts. Air introduced under the floor, and passing upwards through holes made for the purpose, or admitted between the boards, blows up the carpet, and produces a disagreeable effect: openings under the windows and behind the curtain may answer very well at night when the curtains are drawn, but would not do well in the day. Perhaps air admitted behind the skirting, with a number of small holes in the floor close to the skirting, might answer the purpose; but if anything of that sort were attempted, it would be necessary to retain the means of regulating the supply. From what has been already said, it will be understood that the quantity of air introduced may be very small, being in fact an addition to that already admitted by the imperfect workmanship of the doors and windows, and which is found of itself to be almost sufficient: and it is necessary that this small quantity should be very much divided, and that the current should be directed in such a manner as to be as little sensible as possible. If the air so introduced were warmed (not heated), it would be an improvement, but this requires a separate warming apparatus below, and can hardly be made use of, except in large establishments.

Cold air at the top is said to have answered exceedingly well, but I do not know particulars, and the success of all these projects for warming and ventilating often depends on little circumstances which are not attended to till the result shows their importance. As far as the mere supply of air to the chimney is concerned, I should think this unobjectionable when the external cold is not severe. When it is, the effect might be like that recorded, where the breaking of a pane of glass at the top of the window in a heated room produced a shower of snow formed within the apartment. This, however, could hardly take place where the quantity introduced was small and very much divided. Everything tends to show the importance of this minute division. Many rooms, where in cold and windy weather we complain of draughts in the daytime, are perfectly comfortable in the evening when the shutters are shut, or the blinds let down, and the curtains drawn. The quantity of air introduced is not less, but it is more broken and divided.

In building a new house, it would not be difficult to provide for a supply of warm air at the top of the room. A false back might be made to the fireplace, and a stream of air carried behind it be sufficiently warmed for the purpose by the common fire, and afterwards introduced into the room by one or more openings. But all these considerations of the mode of supplying the requisite quantity of air must be modified by the necessity of providing for the purity of that which remains in the room. With only a few persons present, and no artificial lights, this seems to take care of itself; but when a party is assembled, and numerous lights are burning, the air soon becomes vitiated, and the room is close and unwholesome. The vitiated air, though mostly in its nature heavier than the pure air, yet being more heated becomes thereby lighter, and rises to the ceiling. As it becomes cooler, and fresh heated air rises to take its place, the former portions of vitiated air descend, probably by the sides of the room, especially by the external wall, and are thus conducted towards the fireplace, where they are carried off. This process is more or less interrupted by the necessary introduction of additional air, both for the persons present and the supply of the fire. Hot air at the top of the room prevents the ascent of the foul air, and it appears at first sight as if it merely in effect reduced the height of the room; but if it be abundant, and especially if it be only warmed, and not made too hot, the descending current against the outer wall may still take place, and a portion of good air be diffused through the apartment. If so hot and so plentiful as to depress the foul air below the line at which it is breathed, it would make the room far too hot to be bearable.

It seems to me that this process of circulation might be advantageously assisted, especially as we are in the habit of using battens against the external wall. A number of small holes may be made just under the cornice, or concealed among its ornaments into the space between the plaster and the wall; and a similar series of small holes at the bottom of the skirting, or an opening along the back of the skirting and leading to the fire would insure a constantly descending current. This might perhaps be accelerated, and a portion of fresh air introduced by a series of holes bored through the outer wall a little below the holes in the cornice, and communicating with the same space between the wall and the plaster.

The necessity of removing the vitiated air is adverse to the plan of introducing air under the hearth, for the immediate supply of the fire and of the draught of the chimney; yet I am not prepared wholly to condemn it. In spring and autumn we often reside in rooms where there is no fire, and where the windows and doors are shut, without inconvenience. The circulation above described as taking place within the room would still exist, and if the supply from under the hearth were not too copious, most of the vitiated air would still find its way up the chimney.

We may now pass to the æsthetical part of our subject, and first of symmetry. In man, and generally in animal life, there is an exact symmetry of corresponding parts, so that if the body be divided into two equal portions, the members of each part correspond in size and position with those of the other part; but we cannot again divide each half into corresponding parts, nor even take any one portion of the half and divide it into two equal and similar parts. I think this observation should be present with us in architectural designs, and that in attempting to carry farther our notions of symmetry, we lose more in variety and apparent convenience (for *apparent* convenience is a beauty), than we can possibly gain by adherence to a more complete symmetry, either in external or in internal architecture. In the former, indeed, it seems to me an absolute defect, as it destroys the unity of the composition, making of each part a separate whole, and internally it is generally impossible.

In such a house as we are now considering, even that degree of symmetry which I have above recommended is in general quite unattainable, nor shall we even succeed perfectly in descending a step lower, and making each side symmetrical in itself. It is true that on the side occupied by the windows the two halves may correspond, and so of the end containing the chimney-place. The end opposite the chimney, being perfectly plain, presents no difficulty, but that in which the doorways are placed is entirely anomalous. Our folding doors agree with nothing, correspond with nothing, and are tolerated only for their convenience, or perhaps sometimes for some adventitious beauty arising from the union of the two rooms. Considered as a feature of a single room, they can only be a deformity. Even the single entrance door has nothing to correspond with it. If, instead of folding doors, there were a second door corresponding with it, opening into the back room, we should have this side symmetrical, but the position of such a door with respect to the fire-places in both rooms would render it quite inadmissible.

Another scheme might be adopted if it were determined to have three windows to the room, making the first part into a sort of ante-chamber, by a couple of pilasters, or very slight projections, and marking their union on the ceiling; thus each side of the inner part of the room would be symmetrical, and the whole would exhibit that evidence of design which always seems to produce a mental gratification.*

J. W.

* To be continued.

THE DISTRIBUTION BY THE ART-UNION OF LONDON.

An elegant audience filled the Lyceum Theatre on the 25th to receive the annual report and witness the distribution of the funds subscribed. Good humour prevailed everywhere, the speaking was pithy and pleasant, and the whole of the proceedings passed off most satisfactorily. We must restrict ourselves to a briefer notice than we have sometimes given.

The Right Hon. Lord Monteagle, president, having taken the chair,

MR. GODWIN, F.R.S. Hon. Secretary, read the following

REPORT.

The history of the Art-Union of London, when it is written in after times,—and no account of the progress of the Fine Arts in this kingdom will be complete without reference to that history,—will form a very extraordinary chapter. The difficulty with which 490*l.* were raised by it in the first year, and 750*l.* in the second; the growth of the subscription to 1,300*l.* 2,200*l.* 5,500*l.* 13,000*l.* 14,000*l.* 15,000*l.* 17,000*l.* and in one year to nearly 18,000*l.*; ultimately subsiding to an annual income of from 12,000*l.* to 13,000*l.* a year, and furnishing in the whole up to this time nearly 200,000*l.* in aid of art and artists; its ramification throughout the British empire and its dependencies far and wide, in parts of America, and some foreign states, by means of local secretaries; the difficulties which at one time beset it, overcome by demonstrations on the part of artists, and personal discussions with two prime ministers and various Chancellors of the Exchequer, and resulting in an Act of Parliament and a Royal Charter,—are some of the features which the review would present. The great point, however, to be dwelt upon would be the effect which the operations of the Association have admittedly had in imbuing the middle classes of society with a taste for Art, and so in leading to a much greater encouragement of artists than can be measured by the sum of the funds actually provided by the Association.

The subscriptions for the present year amount to the sum of 12,910*l.* 16s. and would have been even larger but for extraneous circumstances (the disturbed condition of the public mind, and the threatened imposts which follow in the train of "grim-visaged war"). None have more reason to deplore the necessity for war than those who desire to advance the arts of peace. The achievements of our gallant countrymen and allies will doubtless supply materials for our painters and sculptors hereafter; nevertheless, it is to be earnestly hoped that the struggle will be short and decisive.

Each subscriber of the current year has received an engraving of Mr. Stanfield's picture, "Tilbury Fort—Wind against Tide,"—worth in ordinary commerce a guinea and a half.

The subscribers of last year have also received their engravings, "The Surrender of Calais" and "Christ led to Crucifixion." It may serve to suggest the extent of the Society's operations if we mention, that in distributing the last-named prints over the country, in one week at the end of last year, five hundred packages were forwarded to that number of local secretaries and agents, containing 17,500 prints, with 17,500 sheets of tissue-paper, 55,300 copies of prospectus, 13,578 receipts, and the same number of print-orders, 8,000 almanacs, and 10,265 other papers, making a total of 135,775 pieces.

For the ensuing year it is proposed to offer to each subscriber an impression of a plate by Mr. Willmore, A.E.R.A. from the picture "A Water Party," by Mr. J. J. Chalon, R.A. together with a volume containing thirty wood engravings illustrative of "Childe Harold," from drawings by Messrs. Ansdell, Cope, R.A., E. Corbould, Dodgson, Duncan, T. Faed, John Gilbert, James Godwin, F. Goodall, A.R.A., J. Holland, Hulme, Hart, R.A., Lake Price, Leitch, Selous, Tenniel, and Wehnert. The Council have reason to believe that this will be a beautiful work.

The lithograph from Mr. Frith's picture from the *Bourgeois Gentilhomme*, "The Three Bows," which Mr. Maguire was commissioned to produce, has been completed, and the right to receive copies of it will be allotted to-day. As it is a very satisfactory production, your Council have commissioned Mr. Maguire to make a companion lithograph from "The Supper Scene," by the same artist, from the same play.

The Council have the satisfaction of announcing that the "Flaxman" medal has been successfully executed by Mr. Henry Weigall, and they congratulate the members on the production of so beautiful and excellent a specimen of a branch of art which they have always been desirous of encouraging, and which they consider not to be sufficiently appreciated in this country, either in an artistic or an historical point of view. Impressions of this medal will be allotted to-day.

The Council had entrusted the execution of a medal of Flaxman to the late Wm. Wyon, R.A. but his untimely death precluded the accomplishment of their purpose, and caused the delay which has occurred. The medal of the above distinguished artist, the late Mr. Wyon, by his son, Mr. Leonard Wyon, is completed, and will be issued on a future occasion.

Mr. Thorneycroft has executed for the society an equestrian statuette of the Queen, as her Majesty appeared in the camp at Chobham, an exciting scene foreshadowing a stern reality then little contemplated. Copies of this statuette, in bronze, will be distributed to-day. Some bronzes of "Satan Dismayed," copies of the composition illustrative of "Wellington's Entry into Madrid," produced in electrotype, after the model by Mr. Jeffreson, and porcelain statuettes of "Solitude," and the "Dancing Girl Reposing," will also be included in the distribution. The manufacture of bronzes in this country, notwithstanding the impulse given by our proceedings in this respect, is still very limited, and might most usefully be increased. There is here a promising field for the exercise of British ingenuity and skill at present little worked. The production of artistic forms in zinc, a branch of art carried to considerable perfection abroad, is altogether neglected in this country, and the same may be said of cameo-cutting.

Following up their previous endeavours to aid in the improvement of iron castings, the Council have determined on the execution of an ornamental vase in that material, from a fine example in the British Museum, for the subscribers of a future year. In other branches of art, they have commissioned the production, in porcelain statuary, of a reduced copy of the beautiful antique bust "Cleite," in the Townley Collection. They also propose to put in hand forthwith a volume of wood engravings, from fine pictures by deceased British artists;—works "clothing the palpable and familiar with golden exhalations of the dawn." 178 works of art were purchased by the prizeholders last year from the various public exhibitions of the season, ranging, in value, from 250*l.* downwards. These were exhibited in the Suffolk-street Gallery, by the kind permission of the Society of British Artists, and were visited by very large numbers of persons, as usual without the slightest accident, although for part of the time the general public were admitted without any restriction.

This annual provision of a free exhibition of modern art for the inhabitants of the metropolis, must be regarded as amongst the good results of the Association. Viewed on the lowest ground, saying nothing of the educational character of a picture-gallery, and its power to lift the observer

> "Above the smoke and stir of this dim spot
> Which men call Earth,"

it affords innocent and unalloyed pleasure to thousands, and this of itself is no small thing.

The number of local secretaries and agents, it has been seen, has now reached 500: besides those in the United Kingdom, the Society has representatives in Australia, Belgium, Bermuda, Canada, Cape of Good Hope, the Channel Islands China, Egypt, the East Indies, France, Holland, Italy, Malta, Mauritius, Mexico, New Brunswick, Newfoundland, New Zealand, Nova Scotia, Portugal, Spain, Turkey, the United States, the West Indies, and Venezuela. The Council appreciate fully the advantage derived by the Association from the exertions of the body of gentlemen thus acting, and offer them, on your part, their warmest thanks.

While speaking of services done, they take the opportunity to acknowledge the very satisfactory discharge of his duties by Mr. T. S. Watson, the assistant secretary.

The Council have lost the co-operation of a valued member of their body, and frequent attendant at their meetings—the Honourable Mr. Justice Talfourd, of whom it is sufficient to say that his death is mourned by the country. The retiring members are Baron de Goldsmid, William Leaf, esq. and the Very Rev. the Dean of St. Paul's. To fill the four vacancies thus caused, the Hon. Mr. Justice Vaughan Williams, E. W. Field, Esq.; Thos. Macdonald, Esq.; and W. J. Smith, Esq. have been elected.

The reserved fund now amounts to the sum of 5,764*l.*

The following is a statement of the receipts and expenditure:—

Amount subscribed	£12,910	16	0
Set apart for purchase of pictures and other prizes.....	8,248	0	0
Cost of engraving	1,822	15	3
Printing and other expenses ...	2.840	0	9
	£12,910	16	0

The accounts have been audited by two members of the general body of subscribers, Mr. Purdie and Mr. Williams, to whom thanks are offered, and three members of the Finance Committee.

The sum set apart for prizes, to be selected by the prizeholders themselves, will be thus allotted, viz.:

25 works, at	£10	each.
20 ,, ...	15	,,
30 ,, ...	20	,,
30 ,, ...	25	,,
30 ,, ...	40	,,
14 ,, ...	50	,,
20 ,, ...	60	,,
12 ,, ...	80	,,
6 ,, ...	100	,,
2 ,, ...	150	,,
1 ,, ...	200	,,
1 ,, ...	250	,,

To these are added,—

5 Bronzes of her Majesty.
2 Bronzes of "Satan Dismayed."
5 Bronzes in relief of "The Duke of Wellington entering Madrid."
40 Tazzas in iron.
60 Parian Statuettes, "Solitude."
80 Porcelain Statuettes, "The Dancing Girl Reposing"
30 Silver Medals of Flaxman, and
500 Impressions of the lithograph, "The Three Bows."

Making in all 913 prizes,—being rather more than one to every thirteen members.

The bronzes, Parian statuettes, and medals, will be allotted to the first 222 names drawn consecutively at the close of the general distribution. The lithographs will be allotted to the names standing one hundredth in the list preceding and succeeding that of each of the first 250 prizeholders, determined as above stated: with the proviso that a prize has not fallen to that number to-day—in that case the prize will pass to the next succeeding name. Notice will be sent to those entitled to the statuettes, tazzas, medals, and prints, in the course of two or three days. The other prizeholders will be informed of the result by to-night's post.

In accordance with a statement made in a previous report, your Council forwarded to the New York Exhibition of Industry and Art casts of sculpture executed for the Association, namely, "The Dancing Girl Reposing," and "The First Whisper of Love," and at the close of the exhibition presented the first to the New York Mercantile Library, and the second to the Boston Athenæum.

The art of the sculptor has been recently in greater requisition in Great Britain than usual, in consequence of the demand for memorials of the late Sir Robert Peel, and of our great commander, the Duke of Wellington. Some important commissions to this effect remain to be executed, and will give our sculptors further opportunities of distinguishing themselves. Apart from a consideration of the importance of affording encouragement to artists, the adornment of our public buildings and open places with statues of our great men, silent teachers of the solemn precept, "Go thou and do likewise,"—whisperers ever ready to—

> "Fill the nice and delicate ear of thought,"

with ennobling or purifying suggestions, is a matter of considerable consequence, and should be kept in view by those who are in authority. We may, perhaps, regard as an evidence of a step in this direction, the circumstance that Sir William Molesworth, as Chief Commissioner of Works, is now collecting information concerning existing public statues, in order to prepare a report on the subject, and a Bill to be laid before Parliament.

The bronzes issued by the Association, form now an important series, and the Council gladly adopted the suggestion of the Government Department of Science and Art, and forwarded them to Marlborough House for exhibition.

Advocating, as your Council always have done, the desirability of making a knowledge of drawing general, as the essential first step to an improvement in design, they can but view with satisfaction the desire manifested by the Government Department to bring about that end. The primary condition to be complied with by every new school of art in the country, in order to obtain the assistance of the Department, is, that three poor-schools shall be taught by their master. And by this means, at the close of the last year, 7,000 children of the poor were being taught in eighty-six schools. Pecuniary advantages are offered to masters of elemosynary schools who will fit themselves to teach drawing; and at this time, probably, 1,500 schoolmasters and their apprentices are being taught to teach; while 218 schools, instructing 35,000 scholars, have purchased the examples supplied by the department at half-price. The schools of art have increased from twenty to forty-five in number, and give instruction to a very large body of students throughout the kingdom, so that we may reasonably hope to find obvious good effects before long.

It is but quite recently that education in art has

been attempted in this country, and it must not be expected that any great result will be suddenly produced. A public to appreciate and encourage is as essential as designers capable of producing; and such a public we are gradually obtaining, but it has been the work of time.

At a recent artistic dinner, Mr. Disraeli, commenting on the difficulty with which the mass of the people had been led to appreciate art, and sympathise with artists, and inquiring into the causes of this, asked with reference to those who attributed it to our devotion to money-making, if it were true, that we are so entirely devoted to material interests, that a general feeling for the fine arts cannot be supported and maintained in England? "If we examine the evidence," said the speaker, "I must confess it does not seem to me to substantiate that theory. Who, for example, are the most munificent and most influential patrons of the fine arts? Do we not find them among the most busy classes; among those who are supposed to be entirely devoted to the pursuits of material fortune, the manufacturers and the merchants of England. One of the great features of the present day is the taste shown by the middle classes for the fine arts. I do not mean to say," he continued, "that the aristocracy of England have not always been most distinguished by their taste for, and have not been foremost in their support of, the fine arts, by which they have benefited in the refinement and cultivation of their minds; but it is the great feature of society in the present day that the most munificent patrons of the fine arts are found among the middle classes."

That the Art-Union of London has greatly contributed to bring about this result is the chief boast of its supporters, and their chief reward; and it is their further aim to extend this taste until it influence all classes of society. Artists will thus be led to produce noble works, and the interests of art will be best advanced. If it were our province to point out what is most to be regretted in the majority of the artistic productions of the day, we should venture to say the absence of deep feeling, of the inspiration which inspires. "The true object of the art," as a German writer justly says, "should be, instead of resting in externals, to lead the mind upwards into a more exalted region and a spiritual world." And elsewhere, the same author, pointing out that as there is in the moral world but one virtue, so in the arts there is but one true path, writes,—"Perfection consists in the union of the idea and vitality; everything that breaks this union—every deficiency on the one side or the other is a fault, and, if further developed or adopted as a principle, will lead to mannerism. The idea, if suffered to predominate, produces works that are cold and inanimate, or, at least, in some measure, deserve the reproach of hardness. The attempt, on the other hand, merely to copy life and nature, may in some cases produce strong effects, as many of the *naturalisti* have done, but with the loss of ideality is banished all deep meaning, and even that internal character which forms a most essential condition of the art." In deep feeling, as it seems to us, is found the only source of true beauty and exalted art.

This, however, is to some extent a digression, and your Council will here conclude their report with a renewed appeal for your continued co-operation.

GEORGE GODWIN, } Hon. Secs.
LEWIS POCOCK, }

The Chairman moved the adoption of the report in an excellent address, wherein he said he felt somewhat ashamed, as a member of the Legislature, that the money raised by the Art-Union of London exceeded the whole amount which Parliament had given during a similar period for the encouragement of art.

Mr. Serjeant Thompson followed, commenting with much feeling on the loss of Mr. Justice Talfourd, and the motion was carried unanimously. So, too, was a vote of thanks to the council, moved by Mr. Hurlstone and seconded by Mr. Walter G. Taunton. And then Mr. Isaac, of Liverpool, moved a vote of thanks to the honorary secretaries.

Mr. Charles Hill, F.S.A. in seconding this, made an amusing speech, and alluded gracefully to Mr. Lewis Pocock's endeavours to establish the Amateur Exhibition, and to some doings on the part of the other honorary secretary.

The motion having been carried, thanks duly returned, and the cordial acknowledgments of the meeting voted to Mr. Charles Mathews, for the kind manner in which he had placed the theatre at the disposal of the council, scrutineers were appointed, and Miss Mott and Miss Roberts having consented to act as the distributors of fortune, the drawing commenced. When it was concluded the ladies were thanked, and the scrutineers were thanked, and Lord Monteagle was thanked (well deserving it for the able manner in which he had discharged his duty), and then the meeting dispersed, with a hearty response to a remark by one of the speakers, that for joining the Art-Union of London, and attending there that day, they had a much better motive than merely personal gratification or advantage.

We give the names of a few of the principal prizeholders:—250*l.*: Hewett, J. Leamington. 200*l.*: Black, C. H. M. Halifax, N.S. 150*l.*: Laing, Mrs. New Amsterdam; Saunders, Mrs. W. Burton-on-Trent. 100*l.*: Cooper, T. Rotherham; Harrison, G. Brook-street; Jay, J. T. Acle; Kelly, T. Manchester; Ness, —, Helmsley; Shipton, J. Chesterfield. 80*l.*: Coleridge, Rev. E.; Ellison, T. Barnsley; Grice, W. W. North-street, Westminster; Griffin, Jno. Banbury; Jackson, N. Stamford; Jones, C. Old Kent-road; Massey, W. Wotton; M'Kewan, D. H. New Kent-road; Pardo, M. jun. Caraccas; Phillips, E. G. London-road; Phipps, W. S. Blackfriars-road; and Tillet, Jno. Milton-terrace.

BUILDERS' PRICE-BOOKS.

I AM glad to see that my remarks in a former number have interested your correspondent, "J. T. P." on this subject. In the midland, and most of the northern counties the yard square of 9-inch brickwork is the standard used, and either that or the yard cube would be the best for calculation. The present price-books, instead of giving data for calculations at times prices, go through an unnecessary formula of per-centages, prime costs, &c. quite bewildering to an indifferent mathematician. I would suggest for brickwork the following method:—

A CUBE YARD OF BRICKWORK.

	£.	s.	d.
384 bricks delivered, at per thousand,			
including profit	0	0	0
6 cubic feet of mortar, ditto ditto...	0	0	0
Wear and tear of scaffolding	0	0	0
Labour, at per day— bricklayer at 5s.;			
labourer, 3s.—8s.	0	0	0
Total, profit included	£0	0	0

For joiners' work the present system is far more inconsistent than brickwork: most book-prices are calculated at the hundred of deals: in the country we buy by the Petersburg standard: instead of such unnecessary and far-fetched calculations why not take the price of 1-inch deal net in work for the purpose? Every party would know the price of 1-inch deals in his own locality, he would only have to add and ascertain the price per super foot, including waste. For example, take—

	Quantity 1-in. deal per foot super.	Glue and sand-paper, &c	Labour, at 5s. per day.
1½-in. 4 panel door, square-framed, stiles 4½-in. lock and bottom rails, 8½ ½-in panels.....	1·30	0·50	5·00

This would make the price per foot—

1·30 of inch deal, profit included, at 4d.	5·20
Labour, at 5s. per day, ditto.....	5·00
Glue, &c.	0·50
Total, profit included.....	10·70

I would have either decimal constants to be multiplied by the masters' price per day, or decimal prices at a given rate, say 5s. per day: then if masters' price in some cases were 4s. it would simply be deducting one-fifth, or at any other rate add or deduct according to the different proportion of wages.

For stonework, the system of pricing and measuring adopted at the Houses of Parliament (see "Weale's Pocket-book," page 96) is decidedly the most rational, but for the full explanation of which a few illustrations and examples are required, as also in the other departments the method of construction and mode of measuring have much to do in determining the price, and should as much as possible be shown, and would be done with much less trouble than the unnecessary mathematical problems before mentioned.

In the present unsettled state of the markets and price of labour a work founded on correct principles and embracing a sufficient variety of subjects in each department would be very valuable to practical men, and a saving of time to professional ones, at the same time it might be the means of introducing an uniform system of measuring which is much required. I have before me now three books which differ very materially on one point, namely, the number of mitres to be charged extra in a plaster cornice: one says charge all mitres, another all above four, and the last all above six, and in other matters there is equally as much difference in opinion. Z.

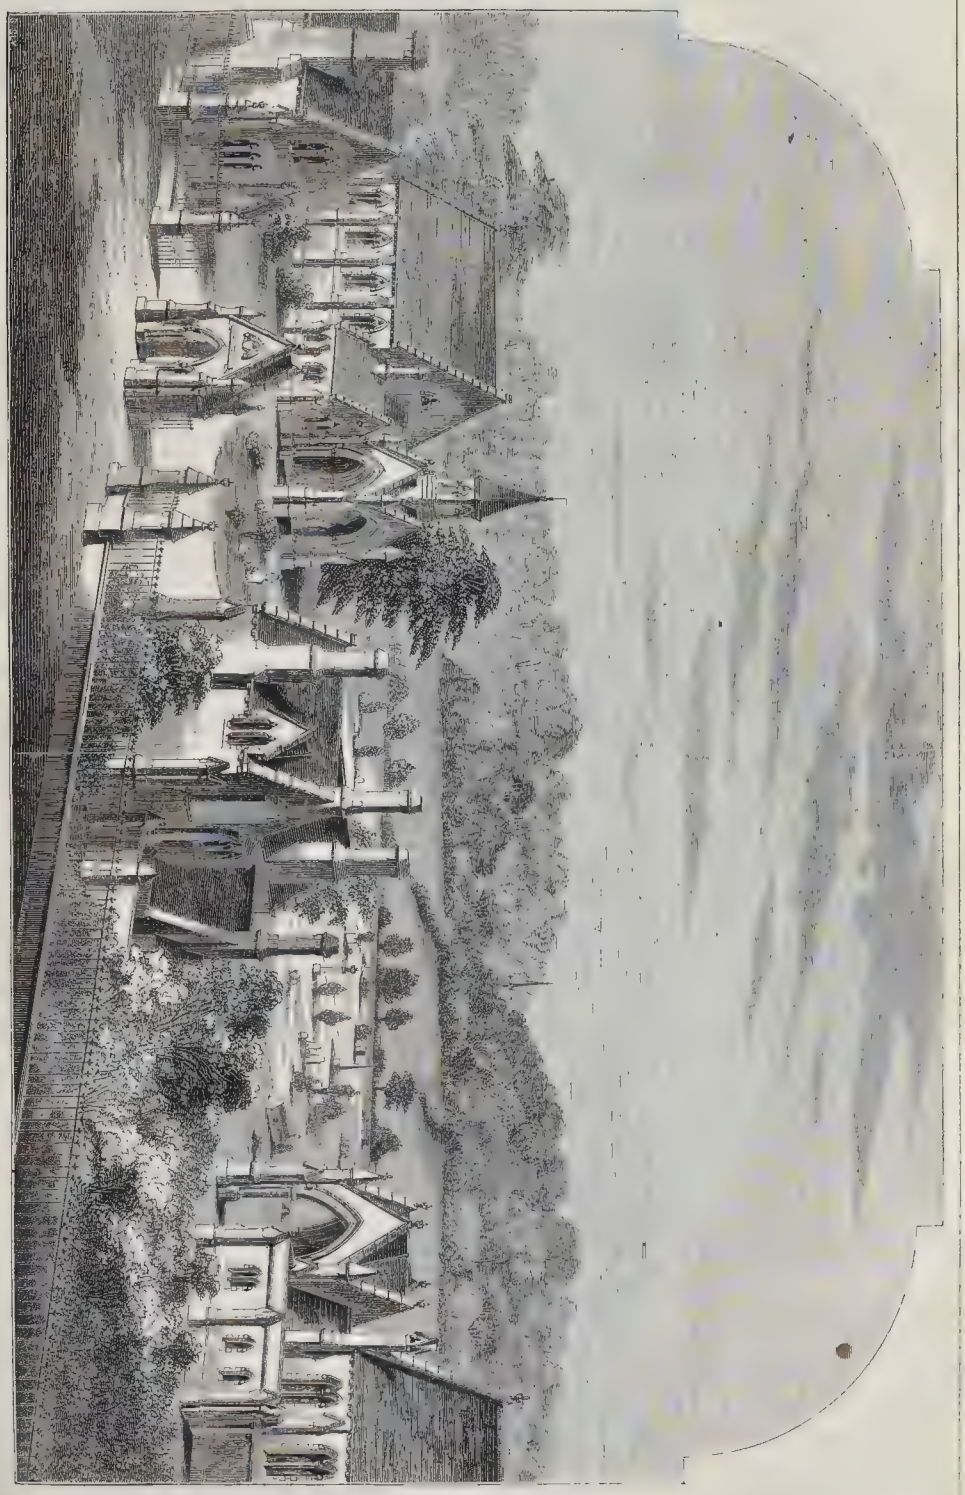
THE TOMB OF THE TRADESCANTS AND GRAVESTONE OF ELIAS ASHMOLE.

IN noticing the restoration of the tomb of the Tradescants in Lambeth churchyard, in your last week's journal, your correspondent states that such restoration had been effected at the expense of the parish. Allow me to say that the work has been accomplished by the subscriptions and united efforts of many members of the University of Oxford, and friends desirous of perpetuating the labours "of the gardeners to the rose and lily queen;" and that beyond the subscription of the rector, churchwardens, and some few residents, the parish has not been charged in the smallest degree with the cost so incurred. I trust you will deem this correction worthy of insertion, not that I think it of any vast importance that the parish should have the credit; yet I do think that the friends of natural history and those friends who venerate the shade of Ashmole, ought not to be deprived of their share of credit in the undertaking.

J. FORBES YOUNG, Treasurer to the Fund.

LAMBETH BURIAL-GROUND AT TOOTING.

THE burial-ground for Lambeth is now in course of preparation, from the designs of Messrs. Webnert and Ashdown, architects, on thirty acres of land, near Garrett-lane, Tooting, purchased from Mr. Martin, at a cost of 9,000*l.*



The buildings on the ground comprise an Episcopal chapel, with an internal area of 860 feet, and sitting accommodation for sixty persons; a vestry, waiting-room, and conveniences attached to each, and a large porch to drive under, surmounted by a bell turret; a Dissenters' chapel, with an internal area of 750 feet, and sitting accommodation for sixty persons, vestry, waiting-room, &c. and porch the same as in the Episcopal chapel, but without a bell turret; a lodge at the north side of the entrance, as a residence for the superintendent of the burial-ground, with an office and boardroom; and a smaller lodge at the south side of the entrance, for an inferior officer.

The principal entrance to the ground is in the centre, and comprises two carriage entrances, and a covered foot entrance, between them, with two enclosed seats for the porter, to prevent the necessity of wooden sentry-boxes. There are also two side entrances. The relative position of the buildings is shown in our view. The style of the whole of the buildings is plain Early English, and the materials are white perforated bricks, with Bath stone dressings.

In the interior of the chapels, there is a stone arcade running the whole length of the buildings, under the windows, for the insertion of mural tablets or inscriptions, so as not to interfere with the architectural effect. In the Episcopal chapel a small altar is provided.

The ground is enclosed by a dwarf-wall and iron-railing, together 9 feet high, with piers of brick with stone caps.

The first stone of the Episcopal chapel is to be laid on the 4th of May, and it is expected that the ground will be consecrated on the 26th of May. One third of the ground is to be left unconsecrated. In laying out the cemetery, the architects have avoided irregular forms, and serpentine roads and paths, and with the exception of the approaches to the chapels, have divided the whole of the ground into parallelograms, as better adapted to an economical appropriation of the ground for interment; the plots being calculated for a regular number of graves, and the intermediate paths so arranged as to be available for graves when the rest of the ground is full.

LAMBETH BURIAL GROUND, TOOTING.—Messrs. Wehnert and Ashdown, Architects.

THE OLD WATER-COLOUR GALLERY.

The half-hundredth exhibition of the Society of Painters in Water-Colours, in Pall-mall East, consists of 356 pictures; and, if not superior to former collections, maintains very satisfactorily the reputation of the members. The most striking works in the gallery are those by Mr. John F. Lewis (notice particularly, "Roman Peasants at Entrance to a Shrine" 341), John Gilbert ("The Drug Bazaar," 34, "A Turkish Water-carrier," 137, &c.), Carl Haag ("Evening at Balmoral" and "A Roman Monk," 114), Frederick Tayler (though weaker than he is sometimes), and by Mr. Branwhite, "A Scene on the River Conway" (16).

Mr. Richardson's "Val St. Nicolia" (14), and 'View of Lagonegro" (179); Jenkins's "Russian Serf" (97); Callow's "Rath-Haus, Leipzig (120); Miss Gillies' "Mourner" (182); Bentley's "Hastings from the Sea," and E. Duncan's "Hay Barge off Purfleet" (253), are all charming pictures. Amongst the more architectural works, Joseph Nash's "Abbaye, St. Amand, Rouen" (188), stands pre-eminent; while Brandling's interior of the "Church of St. Lawrence" (200) well deserves mention.

CHURCH-BUILDING NEWS.

Goldhanger.—The ancient church of St. Peter, Goldhanger, has lately been restored and beautified, at a considerable outlay, the whole defrayed by the rector, the Rev. C. B. Leigh, and his family. The parishioners of Goldhanger, with Little Totham, have raised a subscription, to which all classes and creeds have cordially joined, and erected an organ in Goldhanger church, manufactured by Walker, of London.

Chirbury (Salop).—A new church is about to be erected at Marton, in this parish, a site having been given for the purpose by Mr. Edward Humphreys, of Walcot, and a sum of money, amounting to about 1,200*l.* raised by public contributions. About 600*l.* in addition to this sum will be required for the endowment. This will be the second church erected in this extensive parish through the exertions of the present incumbent.

Bucknall.—The chief stone of a new church was laid on Wednesday in last week at the quiet little village of Bucknall, about a mile from Hanley. The demolition of the old building has so far proceeded, that the only vestige of it now remaining is the chancel. The new erection is about fifty yards to the south of the old one, upon more elevated ground, and the spire, when carried up, will form a crowning point to the whole. The edifice will be built in the Early English style, and will consist of a nave, 63 feet long by 21 feet wide; a south aisle of same length, by 10 feet 9 in. wide; a south or children's aisle, 27 feet 6 in. long by 14 feet wide; and a small chancel aisle and vestry. A porch will ornament the south side, and the steeple on the north side will form another porch entrance. The building will accommodate upwards of 500 persons, and will be heated by an apparatus, for which a vault is provided beneath. The whole will be of stone from the Werrington quarries. The interior of the roofs and the seats will be framed open of deal, and stained and varnished; and the roofs outside will be covered with tiles. The base of the steeple only will for the present be carried up. Messrs. Ward and Son, of Hanley, are the architects; and the contractor, Mr. Thomas Reeves, of Werrington. The estimated total cost of the building when completed is 2,300*l.*; but the present contract will not be more than 1,850*l.*

Wath.—A memorial window is in course of completion, to be placed in Wath Church, near Rotherham. It is executed by Mr. Crookes, of Sheffield, and is in the shape of the centre openings of a four-lighted window. The work is done by commission for Messrs. Johnson, of Wath-upon-Dearne. It represents full-length figures of Isaiah and Jeremiah, surrounded by diaper back-ground, and by a canopy extending nearly from the bottom of the figures to the point of the lights, the whole encompassed by a margin of green and ruby. The size of the lights is 15 feet by 2 feet 6 inches.

Yeadon.—On Tuesday, in last week, the Wesleyan Reformers of Yeadon laid the foundation-stone of a new chapel which they intend erecting in that village. Two bands of music (Yeadon brass bands) were engaged to give *éclat* to the proceedings. On the ground some 2,000 persons were congregated.

Leeds.—The new church of St. Michael, at Buslingthorp, Leeds, was consecrated on Monday in last week, by the Bishop of Ripon, in the presence of a numerous assembly. The church is situated on the east of the Carr-mills, at Woodhouse Carr, and the site, according to the *Leeds Intelligencer*, was presented by Mr. Benjamin Wainman. The building is after designs by Mr. Phillip Boyce, architect, and is a plain structure, in the Early Decorated style, erected by Mr. Charles Jackman, mason, the wood-work being executed by Mr. Wainwright, joiner, and the total cost about 1,700*l.* which has been raised by subscriptions, assisted by grants from the Church Commissioners, and from the Ripon Diocesan Society. There are from 600 to 700 sittings, all free. The edifice has been just completed: the foundation-stone was laid on 29th September, 1852.

THE ARCHITECTURAL MUSEUM.

We have more than once sought to induce our readers to lend their aid to establish the Architectural Museum in Canon-row. The committee are now seeking to raise a fund of 500*l.* to meet the present wants of the institution, and we would again earnestly beg the co-operation of those who feel the importance of the institution. The annual income is sufficient to cover the necessary amount of annual expenses, with a small margin; and by the vigilance of the committee care will be taken that it *shall* do so. The present requirements, then, are not on this but on what may be called the "capital account."

In starting an important undertaking of this kind, it will readily be understood that very considerable outlay was necessary, not only in obtaining objects of study, but in fitting the premises for their reception, and in providing for a multitude of wants necessarily presenting themselves at the commencement of such an undertaking. These have been met partly by a very liberal list of donations, and partly by a loan. The committee have succeeded in placing the Museum on an excellent footing, and have a most extensive collection of objects of study of the most useful kind. It is, however, now absolutely necessary to free the institution from liabilities incurred in effecting this, and which, if allowed to continue, must seriously impede its future usefulness; and it is to aid them in doing this we ask the co-operation of our readers.

Mr. Scott, of Spring-gardens, will receive donations, however small.

PROVINCIAL NEWS.

Harwich.—The Harwich Gas and Coke Company, according to the *Chelmsford Chronicle*, will soon proceed to erect the necessary works on the west side of the town, near to the railway terminus, under the direction of Mr. Bruff, Mr. Hales, Mr. Williams, Mr. Heseltine, and Mr. Freeman; and Mr. Church, of Chelmsford (gas engineer).

Eye.—The following were the tenders for building additional rooms, &c. to the present Union-house at Eye:—Rednall, of Finningham, 4,200*l.*; Nasy and Atkins, of Norwich, 4,550*l.*; Penning, of Eye, 4,747*l.*; Woollard, of Melford, 4,994*l.*; Smith, of Dickleburgh, 5,090*l.*

Huntingdon.—The purchase of three acres of land in Priory-close, for the new cemetery, having been effected, the process of levelling will be shortly commenced. It has been determined to put a brick wall 5 feet high all round the ground. There will be iron gates at the entrance, and a lodge for the ground keeper. A building, half church, half chapel, is to be erected in the centre of the ground, of which two-thirds will be consecrated, and one-third unconsecrated. Mr. Grainger, the Inspector of Burial Grounds, appointed by Lord Palmerston, lately visited the spot, and, according to the *Bury Herald*, approved of what had been done. He also visited the graveyards, and expressed his intention to recommend the Home Secretary to issue an order for the closing of each of them on 1st January next.

Malvern.—From proceedings which lately took place at a meeting of the Malvern Commissioners, it appears that some mistake had arisen as to the best plan for their intended gas works, for which a premium of 20*l.* was offered. The selected plans had been supposed to be those of Mr. Deeley, whereas those of Mr. Shipway were now stated to have been the selected ones, a mistake having occurred in numbering the plans. Objections, however, were made by some of the commissioners to those selected. The latter, it was urged, had not provided a house for the engineer, sheds for coke, nor even a boundary-wall, and only a 30-feet gasometer, not large enough to supply the town for three hours. Mr. Richards, of Worcester, engineer, to whom the whole of the plans sent in were referred, had selected Mr. Shipway's as the best, although both Mr. Penny's and Mr. Deeley's provided all that Mr. Shipway had omitted; Mr. Deeley, too, proposing a 40-feet gasometer, and making provision for an enlargement of the work, if ever it should be necessary, to double the present size. During the discussion, mention was made of a letter received from one of the unsuccessful competitors, but it was not read.

Taunton.—The newly-built structure for the Fish Market is now completed, and is to be opened for public use, according to the local *Courier*, on Saturday next. The exterior of the building presents a solid appearance, and the interior is arranged both for public resort and the convenience of the fish salesfolks, the latter having their stalls fitted up with conduits, conveying a supply of water. Cellarage for storing fish, and accommodation for other purposes, are provided. Situated as this town stands for a rapid transit of fish by railway carriage from the shores of the English and Bristol Channels, the new market will tend to promote and cheapen the supply.

Kidderminster.—Mr. Ankrett, builder, has reared in the meadow under Constitution-hill, in the immediate vicinity of this town, a considerable pile of building, to serve as a manufactory and warehouse for the firm of Henry Jecks Dixon and Co. carpet manufacturers, who are about to adopt upon a large scale the manufacture of Brussels carpets by steam power. In the construction of these buildings a desire has been manifested to make them not only substantial and convenient, but also ornamental. Hitherto the custom in Kidderminster has been to erect factories without the slightest regard to anything but the question how to accommodate a certain quantity of looms or other machinery at the least architectural cost; and the result has been that the town is filled with lank, plain-walled, ugly-windowed, dismal-looking factories, which sadly compromise the respectability of its appearance. The new premises, as described by the *Worcester Herald*, consist of two parallel buildings, 140 feet in length, and three stories in height, a loom-shed behind them 115 feet square, a dye-house, drying-rooms, &c. The materials used in the construction were chiefly blue bricks, with white bricks in imitation of stone for the quoins, window-dressings, ornamental courses, &c. and the same style is observable in the tapering, circular chimney-stack, which from a square base rises to the height of 134 feet above the ground, the prevailing colour being that of the blue brick, with occasional belts of white. This shaft and the walls of the warehouses are surrounded by stone coping. The windows have semicircular heads, and the monotony of the long unpierced blue-brick wall of the shed is broken into divisions by pilasters and arches of white brick. It is said that about 1,250,000 bricks were used in the works, and that the chimney-stack alone required 70 tons of materials. Every portion of the walls, in consequence of the nature of the site, was laid upon a thick bed of concrete, and for the chimney it was found necessary to excavate completely down to the gravel, and then lay a bed of concrete 12 feet thick. The shed-roof is ridge-and-furrow, supported by nine rows of iron columns, seven in each series; each column hollow, and serving to conduct the water from the roof to drains beneath the floor. Ventilation of the building is secured by means of openings

in the roof and walls, and warmth will be obtained from steam-pipes laid in lines along the floor. The front three-storied building is to be appropriated as a warehouse and counting-house, and that in the rear as a preparing and finishing-house. The bore of the chimney-shaft is uniform throughout, in accordance with the system of making the internal capacity of the shaft as great at the top as at the bottom, or even greater,—a rule applicable to house-flues, in order to increase the draught and prevent smoking. The architect is Mr. J. G. Bland, of Birmingham. It is said that the builder's contract was for about 8,500*l.* The proprietor of the site has an intention to build series of cottages for work-people, in conformity, as regards style, with the warehouses.

Kidsgrove (Stafford).—Commodious schools have been erected here at the expense of Mr. Thomas Kinnersly, of Clough Hall, and were opened on Tuesday in last week. They consist of rooms for boys, girls, and infants of both sexes, with a class-room, lavatories, and other conveniences. The general shape of the buildings somewhat resembles the letter T, the foot of the letter coming up to the road, and being formed by the girls' and boys' schools in a parallel range, having the gables to the front; and the arms of the letter being formed by the infants' school, class-room, and lavatories. The two principal school-rooms will accommodate eighty boys and eighty girls: they are each 44 feet long by 18 feet wide, with a door of communication between. The entrances to the schools are through open porches at the sides. Each school is lighted by a large traceried window in the gable next the road, and by similar smaller windows at the sides. The infants' school is for eighty infants, 30 feet long by 17 feet wide. There is a class-room for forty children in the same range with the infants' schools, with separate communications from the boys' and girls' schools: attached to them are cloak-rooms and lavatories. The roofs are all open-framed, the walls wainscotted up to a certain height, and the wood-work stained and varnished. The buildings are of red brick with stone dressings, and covered with tiles arranged in pattern. At the intersection of the roofs is a cupola to contain the bell. At some distance behind these schools is a small burial chapel, also recently erected at the cost of Mr. Kinnersley, upon consecrated ground. The chapel is built entirely of stone from Stockton Brook, and is 30 feet long by 15 feet wide inside, having a wide central alley, and a range of pews on each side, with geometrical open work fronts. The roof is of open framing, and the whole of the wood-work stained and varnished. The floor is laid with Minton and Co.'s encaustic tiles. There is a vestry and tool-house at the eastern end, which have the effect of a chancel, both inside and out, being open to the chapel by an archway, and having a traceried screen across. All the windows are symbolical, being circles filled with tracery, and glazed with stained glass of geometric patterns. There is a bell-turret on the eastern gable. The building is covered with tiles in a similar manner to the schools. At the entrance of the chapel there is a carved gateway of white stone, having wood gates of open geometrical work. The burial grounds have been laid out and planted. The whole of the erections are in the Decorated Gothic style, and are from designs by Messrs. Ward and Son, of Hanley, architects. They have been carried out by Mr. Evans, of Ellaston, through his foreman, Mr. Geo. Harrison, and the carvings have been rendered by Mr. G. Gladwin, of Penkhull. The school and chapel group together as seen backed by the woods belonging to Clough Hall, and, according to our authority, the *Staffordshire Advertiser*, give character and individuality to the village.

Manchester.—The gasworks seem to be again becoming too small for the ever-increasing consumption of gas, especially in the out-districts. The manager, Mr. Brothers, lately submitted a report to the gas sub-committee of the corporation, which stated that the present works were not sufficiently central for furnishing Broughton and Pendleton with a larger supply of gas. Some addition ought to be made to the purifiers, and they wanted storage for a thousand tons of cannel, which would not cost more than 500*l.* The committee recommended that it was not necessary to extend the gasworks, but it was desirable to enlarge the storage room for gas, and to connect the 89 feet gasholder into a telescope holder, so as to hold 156,000 feet, which would probably cost 1,500*l.* They also recommended two purifiers to be furnished, which would cost about 120*l.* and that there should be a shed erected for the storage of cannel, at a cost of 500*l.* The chairman of the committee said, that if it were necessary to establish a branch work, it would be desirable that the manager should live equidistant between the two. The proceedings were confirmed.

Bradford.—The commencement of a new school-room to be erected in Cambridge-place, Wapping-road, under the congregation assembling in Salem Chapel, was made, by laying the foundation-stone on Friday in last week.

Edinburgh.—Of late the closes and alleys of the Old Town have been thoroughly white-washed, and also flushed by means of water. The hose of the fire-engines is employed in this latter service, the volumes of water being propelled forward from the street fire-pipes by its own force. The *Post*, however, very properly insists on the indispensability of drains in every street, close, and wynd, and of water and soil-pipe in every house, to any sanitary measures that can be regarded as effectual. From the worst ventilated and undrained quarters of the Old Town the diseases most dreaded are but too likely to diffuse themselves over the quarters inhabited by fashion, rank, and opulence.

INIGO JONES'S WATER-GATE.

Will you allow me to ask, to whom belongs the beautiful "water-gate" at the end of Buckingham-street, Strand? The neglected, dilapidated state of that architectural gem reflects discredit upon us, and particularly upon those whose privilege it is to consider themselves as the legitimate guardians of so admirable a work. I do not know whether it is about to follow the statue of George II. but certainly everything looks very *wild* about it, and indicative of a feeling of indifference respecting the fate of the bonnie little gate. The roof, long since stripped of its covering, and broken in, admits the devastating rains, and all about the stately little fane savours of impending ruin.

Shade of the immortal Inigo! this should not be. Thousands there are in this land who appreciate the fine spirit embodied in that wondrous little pile, and who would deplore the loss of so *faithful* a monitor in art. The roof should be repaired, and the precincts of *so rare* an example of architecture be kept tidy, were it but to show we are not so barbarous as *we seem*.

A. W. H.

SIGHTS AND SCENERY.

Royal Italian Opera.—If our space permitted (and the Stamp Office demurred not), we should treat more largely of music than we have done, intimately connected as it is with our more especial subjects, and should have to speak oftener of this, its High Temple, where Mr. Gye has rallied round him a *troupe* of unusual excellence, adding to Madame Grisi, Madlle. Bosio, Mario, Ronconi, Tamberlik, and others of last season, Madlle. Sophie Cruvelli, Madlle. Marai, Madame Viardot, and the "profound" Lablache. With such a company, and M. Costa as usual for conductor, we may expect, and shall doubtless have, some of the masterpieces of lyrical art rendered in the most perfect manner. For "*Matilda de Shabran*," in which Bosio has greatly distinguished herself, some of the scenery appears to be new: the first and last scenes are nice specimens of the art, though the latter, a craggy waterfall, has less atmosphere than the supposed painter usually throws around his works.

The Princess's Theatre.—As a specimen of "getting up," "Faust and Marguerite" is perfect, and it is admirably acted, especially by Mr. Kean, who plays the eccentric fiend most artistically. Of the piece itself, in parts (the Garden scene, for example) our praise, perhaps, would be less unconditional. The old German Gothic town is exceedingly well represented, and the revel of the students, the passing of the people to matins, the groupings about the cathedral afterwards, and the partial opening of the latter discovering *Marguerite* at the service, are capitally managed, and culminate in as beautiful a picture as ever was seen upon the stage,—the ascent of *Marguerite* into the skies. The background is an expanse of blue, star-studded, and from the ground ascend, without any apparent support or contrivance, two angels, brilliantly robed, bearing *Marguerite*,—one brilliant spot of colour in a wide field of azure. An admirer of the manager who sat near us said it was a genuine Dominie-Kean-oh, and was not far from the truth.

PREVENTION OF SMOKE.

INSTITUTION OF CIVIL ENGINEERS.

On April 11, the evening was entirely devoted to the discussion of the papers previously noticed, "On the Management of Engine and other Furnaces, and the Prevention of Smoke."

The first important condition was shown to be, the providing the required quantity of air. Reference was made to the area, recommended by some authorities, as being sufficient to allow the quantity to enter a furnace. It had been considered, that even half a square inch of aperture for each square foot of furnace-grate was sufficient for the combustion of the fuel. This was, however, stated to be insufficient for practical purposes; the proper area for admission being from 4 to 6 square inches for each foot of grate, according to the extent of draught and the nature of the coal.

This serious difference was supposed to have been caused by an erroneous calculation of the rate of the current of air entering. For, if half a square inch of area was all that was allowed, the air must have a velocity ten times greater than could be shown to have been ever attained.

Thus, supposing a furnace to be 4 feet by 2 feet 6 in. equal to 10 square feet of bar surface, this would effect a combustion of 2 cwt. of coal per hour, and require, for the gas alone, a supply of 10,000 cubic feet per hour, or, for 20 cwt. of the coal, 100,000 cubic feet.

The following comparison of velocities of the entering air for the supply of the gas, gave some idea of the cause of underrating the required area of admission:—

Air aperture per square foot of grate.	Velocity of draught per second.	Quantity of air per hour.	Quantity for each ton of coal.
6 square inches	At 5 ft. pr second	7 500 cubic ft	75,000
6 " "	At 10 " "	15,000 "	150,000

Then, if the area were reduced to half a square inch, it would require a velocity of 80 feet per second to provide for the admission, within the given time, of the necessary quantity.

By close observation, by means of an aërometer, the velocity of the entering current was estimated at from 8 to 10 feet per second, if the draught was good; and from 5 to 8 feet, when it was but moderate.

It was stated, as an argument for the necessity for some stringent measure, with respect to the engine furnaces in all large towns, that in the last nine years, between 1845 and 1853, 801 new chimney-shafts had been erected in the metropolis, for manufactories, breweries, &c. Some few of them might have been merely rebuilt, after destruction, but the large majority caused additional impurity in the London atmosphere. From 1845 to 1851 the greatest number built, in one year, was 99; but in 1852 111 were constructed, and in 1853 the number rose to 123.

It was contended that, in dealing with the smoke question, too much stress had been laid on the chemical part of the subject, as also, that the statement of its being "impossible to burn smoke" had complicated that which was, in itself, a simple question. All that the public cared about was, that by some simple means the black, or brown, visible smoke should be prevented from forming, or be consumed if its formation was incidental to perfect combustion. The air necessary to perform this could be admitted anywhere; either through a split bridge,—by the fire door,—by an infinite number of holes,—between plates with narrow spaces,—

or by others arranged like Venetian blinds. Practically, the end could be attained by the mechanical systems of Juckes, Hazeldine, Hall, and others, by the double-furnace boilers of Galloway, Rose, M'Gavin, and others, or by the systems of Williams, Prideaux, and many others.

It was stated, on behalf of the mechanical methods of firing, that at Price's candle manufactory, at Vauxhall, three methods, Juckes's, Hazeldine's, and Hall's were employed with success. The general principle, of a continuous supply of fuel at the front of the fire, by means of moving bars, carrying the coal forward, was common to all these apparatus. The air was admitted only from below and between the bars, which were always covered with fuel. The objections urged against these machines were, the first cost and their liability to derangement. These, however, were now diminished, particularly with those of Juckes and Hazeldine, to which preference was therefore given in the construction of new furnaces. They were found to produce almost perfect combustion, and to make a great saving of fuel, with other practical advantages.

ST. OLAVE'S, HART-STREET.

THIS interesting old church, one of the few which escaped the Fire of London in 1666, has been repaired, and, we may add, improved, under the direction of Mr. John Bull Gardiner. Some ugly galleries which lumbered up the aisles have been taken away, the statue of Sir Andrew Riccard, who died in 1672 (a curious piece of characteristic distortion), has been set up, a modern incongruous window removed, and the whole church cleaned and painted, and so forth. Beyond this the altar-piece, with its broken pediment and pilasters, erected probably at the beginning of the last century, respectable of its sort, but unsuited to the building, has been removed and a more congruous arrangement substituted. The latter alteration was made at the cost of the rector, the Rev. John Letts, from a drawing by his relative, Mr. Thomas Little.

So long ago as 1823, when the church was repaired under the direction of Mr. Gardiner, we find him urging in the *Gentleman's Magazine* the desirability of the improvements he has now had the satisfaction of carrying out.

Some of the monuments in St. Olave's are curious. There is one to John Orgone and Ellyne his wife, with a quaint inscription, which is sometimes found in Latin:—

> "As I was so be ye,
> As I am you shall be.
> That I gave that I have,
> That I spent that I had.
> Thus I ende all my coste,
> That I left that I loste.—1584."

The ornamentation on the small altar, before which kneels the effigy of Dame Anne, wife of Sir John Radclif, 1585, is worth notice. Pepys, the author of the entertaining "Diary" which has made his name more famous than that of many much greater men, was buried here in 1703. In the chancel there is a monument to his wife, who died in 1669. St. Olave's was, as he calls it, his "own church," and is frequently referred to in his "Diary."

LIFE IN LONDON.

IN a paper read at the last ordinary meeting of the Statistical Society, "On the Old and New Bills of Mortality: Deaths and Fatal Diseases in London in the last Fourteen Years," Mr. John Angus, the author, described the population and area comprised in the new bills of mortality.

The area embraced an extent of 122 square miles,—on which surface was planted, in 1851, 305,933 inhabited houses,—and contained in that year a population of 2,362,236 inhabitants, increased in 1853 to 2,468,362. This population lived in a density varying from two persons to an acre at Lewisham, to 284 in St. Botolph's and Cripplegate, and to an elevation varying from 2 feet below high-water mark at Newington, to 350 feet above it at Hampstead. The births registered in the fourteen years 1840-53 were 972,508, and the deaths 746,660; the former being in excess of the latter by 225,848. The rate of mortality during that period had been about 2·5 per cent.; showing that London, throwing all its heterogeneous elements *en masse*, contrasted favourably with some of the large towns in England: nevertheless, it still presented a wide field for the sanitary reformer. The destruction of infant life was excessive, but less so than in Liverpool and Manchester. Those diseases had increased which were chiefly generated and propagated by dirt, overcrowding, and other circumstances of bad sanitary condition. Typhus had increased 75 per cent. in the last seven years, as compared with the previous seven years. Intemperance had increased in greater ratio than the population; more's the pity.

THE OPERATIVES' HOLIDAY.

WHY do not the operatives and working classes form among themselves an association for the purpose of visiting, in a body, whenever leisure days and holiday times occur, the antiquities, or old towns, or places of renown, for which any one district or county is celebrated? An intellectual object like this would still enable them to breathe the fresh country air, and though mingling with, could not by any means spoil their summer excursions. For those who have acquired through books some amount of historical research and antiquarian lore, such things as carry their minds back to the old times will have great interest; yet those who have not these advantages, who cannot refer every ancient building to the exact period of its erection, or who know not the events associated with it, may yet see and appreciate, what is of more importance, its peculiar merits, and enjoy exceedingly what is remarkable or wonderful in the artistic treatment some particular work has received and is distinguished for, if, as is most probable, they are of that class of critics "whose eyes are in their hearts," who need not look into books to test on every occasion the truth of their opinions, and who can well dispense with a profound knowledge of archæology. True it is, that from their stated tasks and employments, places which so well repay a visit can be only an occasional luxury; but we have witnessed the benefit some amongst this intelligent class have made of it to themselves, intent upon their self-advancement and making a day's pleasure contribute to their future advantage. FRED. LUSH.

SUGGESTIVE INQUIRIES.

WILL you allow me to set forth the following queries in your columns?

Railway Lamps.—Are not railway carriage-lamps open to improvement? Thousands spend many valuable hours after daylight on railways, and are either prevented from reading by the bad light which the present lamps afford, or do so with some pain and inconvenience. Would not an alteration in the reflector be of some utility? Travellers would hail with pleasure the adoption of lamps that would prove less trying to the sight than those now used.*

Removals by Rail.—Many removals of furniture by rail from town to country are daily taking place. Would it not be exceedingly advantageous to the public (by sparing their furniture from the ill effects of two extra loadings and unloadings) if the van which is to convey the chattels could be supplied by the railway company and brought direct to the remover's door? I can see no difficulty in this, for it would only then remain to be lifted on and off the railway truck.

Duplicate Numbers to Houses in the same Street.—Is not this a growing evil? If builders and landlords would be a *little more* original the public would frequently be great gainers. As an instance, in the Studley-road, Stockwell, there are *six* No. 3's. We all know of two or three streets of the same name!

Beating the Bounds, Holy Thursday.—In consequence of the daily increasing number of houses, should not steps be taken in order to secure the boundary-mark of parishes, to prevent a house from standing in two parishes without a clear and proper boundary being provided? Either this should be done or the present manner of celebrating the immemorial custom of parochial survey and defence of rights undergo a modification, for the periodical visits of a host of "authorities" and others, although they generally keep the day in a cheerful and holiday spirit, are not particularly desired through one's rooms and garden.

P. M. H.

* We feelingly endorse these remarks. It is constantly our fate to spend many hours in a railway carriage, and we have groaned in the spirit many a time and oft at the impossibility of making any use of precious hours after nightfall for want of sufficient light.—ED.

THE LONDON BRICKMAKERS AND THEIR STRIKES.

THE columns of the *Builder* have more than once adverted to the proceedings of the men employed in the brick-fields in the suburbs of the metropolis, and to the serious injuries the masters have sustained.

A conviction, under the "Labourer and Artificers' Act," in which one delinquent was sent to prison for three months, it was thought would be a warning to his co-workmen. It, however, operated the reverse way, and to a greater injury to the prosecutor than to the imprisoned. The masters have, however, adopted since another plan, and it remains to be seen how this will work. John Lee, a moulder, in the employ of Mr. Bell, sued the latter, last week, in the Marylebone County Court, for 6*l.* 13*s.* 10*d.* being a moiety of wages for making 802,547 bricks, at 4*s.* 4*d.* per thousand. He was paid 4*s.* per thousand every Saturday night, Mr. Bell retaining the odd pence until the end of the season. This system of back pence is according to an old custom; but the masters have now made the moulders sign a contract at the time of engagement; and one clause recites, "No such gratuity (back pence) to be payable to any person neglecting or deserting his work, or being discharged for a just or sufficient reason, whereby the season is not completed." This contract Lee put his cross to, although it may be but just to add, he positively swore that it was not read to him, nor did he believe any of the moulders who had signed such a document were aware of its binding nature, or they, like himself, would never have made a brick under it.

Mr. Ambrose Haynes, the solicitor to the brickmakers, warmly objected to the admissibility of the contract, and urged that the signature was obtained by fraud, and the document took him by surprise.

Mr. Bell proved that Lee had neglected and left his work before the season was completed, and added, that he had paid the moulders, offbearer, and temperer their back pence.

The Judge said the contract was sufficient to cause him to nonsuit the plaintiff, with costs.

A PLEA FOR ARCHITECTS' ASSISTANTS.

THE privilege which your correspondent, "Set Square," mentions as being so desirable to be accorded to architects' assistants, viz.—that of leaving their employment at 1 p.m. on Saturdays, is, I can assure you, sir, the wish of all concerned in it. Surely architects cannot deny so reasonable a request, especially when they will reap the benefit equally with their assistants. In proof of this assertion, I would state, first, that when any man is confined to a business without relaxation, he loses his natural buoyancy, his employment becomes drudgery, and for the beautiful art of architecture to be associated with drudgery, is indeed a repulsive idea: thus the employer loses that interest which his assistant would otherwise take in fulfilling his part of the work.

2ndly. The time which would be thus placed at the assistants' disposal, would by very many be employed in studying the true principles of architecture from existing buildings, and from the many excellent works on past architecture now in circulation: thus would the architect possess in his assistant a person capable of affording him such aid as would be of no small value.

Architects' assistants are now beginning to feel that thorough acquaintance with their profession can be obtained only by deep research, and that sound principles of art are only to be found by discriminate observation of existing relics of bygone days.

They look to their employers to enable them to do this, who I am convinced will not dispute the reasonableness of such a claim. Architects should remember that one day their assistants must take their places, and surely they would not wish to have them filled by unworthy successors.

In conclusion, sir, as you often speak through the medium of your valuable journal for the privileges of other classes, let me urge you to speak for architects' assistants. ECHO.

WORKING MEN'S FUNERALS.

The closing of the metropolitan graveyards will render it necessary to carry deceased persons to the cemeteries in the suburbs: this will be a great improvement, and, like most steps in advance, will lead to others, among which nothing will be more advantageous to health and morals than doing at once away with the manner in which *walking funerals* are now conducted. If a working man dies later than Wednesday in any one week his funeral rarely, if ever, takes place before the next Sunday but one. Imagine four men, in a day of June, July, or August, under a heavy pall, their heads in close communion with a body kept that time. Why should not the undertakers furnish a bier after the fashion of a hand-barrow, but appropriately decorated and constructed, for carrying the coffin, covered by its pall: let it be constructed with four or six handles, at right angles to its length, in order that four or six men might carry it, walking on each side. This arrangement will lead to a great improvement,—the getting rid of *paid* bearers, in many cases. It will soon become the custom for workmen to volunteer to carry their deceased brother labourer.* I can imagine no more touching spectacle than to see—instead of the empty compliment of carriages following a procession,—a man carried thus to the grave. In process of time it will become a kind of honest pride that "poor Brown" had ten, twenty, or thirty volunteers to pay this last mark of good feeling and respect—giving consolation to the widow, and speaking emphatically to the bearers and spectators, "Thus shall it be with you."

W. H. B.

* It is has long been the practice in Scotland, even in middle class society. There is no bier: the coffin is merely laid upon two black stained spokes, which cross it, and extend on each side, so as to admit of two carriers, who are changed every few minutes quietly by friends as they go, without stopping, and as a mere mark of respect. The head of the family assists at the head of the coffin.

PROCEEDINGS UNDER THE BUILDINGS ACT.

Nixon *v.* Stow, D.S.—A case involving some important points in the administration of the Metropolitan Buildings Act has been recently heard and determined before Mr. Elliott, at the Lambeth Police-court. In April, 1853, Mr. Samuel Nixon, the builder, commenced to build two houses near Dulwich-common, in the Camberwell district, and finished them in July in the same year. On 8th July, Mr. Stow, the district surveyor, gave the builder the forty-eight hours' notice that they were in several respects irregular. On the 30th of August following he laid an information with the official referees, and on 19th September the official referees made their award, determining that the buildings were irregular, and directing their amendment. No amendment having taken place on the 27th ult. the official referees made their certificate under the 18th section. Mr. Stow now summoned Mr. Nixon before the magistrates for two purposes—in the first place to compel him to enter into recognizance to amend the buildings and pay the costs under the first part of the 18th section; and, secondly, in the event of his not appearing and entering into the recognizance, to obtain a warrant under the latter part of the 18th section for the removal of the buildings and for sale of their materials.

By the 11th section of Jervis's Act, 11 & 12 Vict. c. 43, it is provided that every complaint to a magistrate shall be made and every information laid within six calendar months "from the time when the matter of such complaint or information respectively arose." And the question was now raised whether, the irregularities in the buildings having been committed upwards of six months ago, the builder could now be proceeded against for their amendment.

Mr. W. Pearson, who appeared as counsel for Mr. Stow, contended that the buildings were a continuing nuisance, and that the builder committed a fresh fault every day in allowing them to remain; and further, with regard to the proceeding under the former part of the 18th section, that if the six months' limitation had any application at all, it only commenced to run from the date of the official referees' certificate, the making of that certificate being the event upon which the law declares an irregular building a nuisance, and it only being upon the happening of that event that a district surveyor can summon a builder; and with regard to the proceeding under the latter part of the 18th section, that was a proceeding *in rem* for the removal of a continuing nuisance, and that therefore the limiting clause had no application, and cited the case of Titterton *v.* Conyers (5 Taunton, 475), which was a decision upon the 61st section of the old Building Act. His worship decided that, if the six months' limitation ran at all, it did not commence to run until the making of the official referees' certificate, and therefore the proceedings were well taken.

On the case being called on, Mr. Nixon did not appear, and Mr. Pearson proceeded to prove the case, and applied for a warrant under the latter part of the 18th section for the abatement of the nuisance, and contended that this might be well granted, on the ground that the proceedings under the two parts of the section were separate proceedings, and that the proceeding under the latter part might be taken independent altogether of the proceeding to make the builder enter into a recognizance to abate under the first part, and on the ground that the 13th section of Jervis's Act gave the magistrate power to hear and determine in the defendant's absence, and applied to the present case. His worship, however, ruled that the two parts of the 18th section were but one proceeding, and that no warrant to remove the buildings could issue until the termination of the proceedings under the first part of the section, and that Jervis's Act did not enable him to issue his warrant without having the defendant before him.

Mr. Pearson then applied for a warrant for Mr. Nixon's apprehension under the former part of the section; and his worship expressing his intention to grant such a warrant, Mr. Nixon appeared, and having no further defence to offer, and Mr. Pearson insisting on his committal in default of entering into a recognizance, he entered into the required recognizance in 100*l.* for the abatement of the buildings, and payment of all the costs as well before the magistrate as the official referees.

The material points decided in this case are—1. That the six months' limitation to proceedings before the magistrates under the 18th section, if it run at all, runs only from the date of the official referees' certificate; and 2. That section 18 provides but one proceeding, and that there can be no application for a warrant to remove an irregular building until the proceedings under the former part of the section shall have been exhausted.

Notices of Books.

Designs for Gothic Ornaments and Furniture, after the ancient Manner. By John Gibbs, Architect and Sculptor. London: Geo. Bell. 1854.

We have here forty-eight pages of lithographed designs, "after the ancient manner," best where most like their models, which show a certain aptness in re-combination. Having read Mr. Gibbs's introductory remarks, however, we must confess we looked for more than this. The writer there says, that "Many of the architects who are employed in the development either of Christian architecture or that of heathen countries, are wholly unfit to place before the learning world a building that should express its real character and use. Depending upon powers which they have not, and heedless of that just censure which contemporary men may inflict upon them, they continue the disgraceful practice of designing buildings which the employer and the employed have great reason to be ashamed of. When England has released herself from the bondage of a prejudiced and biassed mind, she will be free to determine the extent of those anomalies which form the mass of corrupt design in modern architecture."

Miscellanea.

Ventilation of the House of Commons.—The House have agreed to place a sum of 146*l.* in the hands of Mr. Gurney, with power to him to make a minor experiment in reversing or otherwise altering the ventilation during the recess. If successful, Mr. Gurney is to be allowed to alter the whole system, at a cost of 1,700*l.* Sad work!

Public-Houses.—I have just been reading an article in a late number, which professes to enlighten the world upon the "mysteries of public-house licensing," and is very severe upon the favouritism exhibited by the "licensing vestries," in granting spirit licenses to members of their own body, when they have been refused to others. May I venture to ask your patriotic contributor how long parochial *vestries* have had the power of granting publicans' licenses, or what influence the members of them are supposed to possess with the licensing magistrates? I believe it has been much more generally a subject of complaint with them, that so little weight is accorded to their recommendations, and it would certainly be something new for me to learn that a house which had once been refused a license, had subsequently obtained one because the property had got into the hands of a vestryman! The truth is, your correspondent has got hold of a mare's nest, and has wasted some virtuous indignation.

A Middlesex Magistrate.

New Town-hall for Cheetham, Manchester.—The foundation-stone of a new town-hall for the township of Cheetham, has just been laid by the Mayor of Manchester, in the presence of a large body of the ratepayers. The site has been given by Lord Derby, and is at the corner of Knowsley-street, having a frontage of forty yards to York-street and of fifty yards to Knowsley-street. The architect is Mr. Thomas Bird, and the builder Mr. Robert Neill, both of Manchester. The proposed building (principal front towards York-street) is of Italian character. The ornamental parts are, of necessity, few, as the sum to be borrowed is restricted to 3,000*l.* in all, furnishing inclusive. The building is to be faced with the best pressed stock bricks, with stone quoins and dressings to all the windows. The front consists of a centre with two receding wings—a stone door-piece with massive panelled pilasters and Doric imposts, supporting large carved consols and entablature, with large folding-doors and ornamental fan-lights over. On each side the door is one window and two others in each wing. The upper story will be divided from the lower by moulded string-course, and consist of seven lofty windows, the centre one more ornamental than the others. The whole is surmounted with an ornamental entablature.

Leamington Local Board of Health.—At a recent meeting of this board, on a resolution being moved to the effect, "That all reports and plans which may have been submitted to this board relative to the water supply and drainage of the district, be submitted to Mr. Wickstead, C.E. for his opinion and report thereon; and that the officers of the board be directed to render Mr. Wickstead every assistance that may aid him in this important investigation," Mr. Oldham, of Southam, brought under notice a plan for a closed cesspool used by him for twenty or thirty years. It was urged that while it was impossible, on Mr. Chadwick's proposal for the abolition of cesspools, completely to suppress or get rid of offensive effluvia from the drains, the insertion of a tank in the line of drainage on Mr. Oldham's plan, acted so as to dilute and fluidify the sewage during the flow and circulation of water into and through the tank or pool; and it had been found that tanks so formed, at a cost of 3*l.* 16*s.* 3*d.* each, had remained for twenty years without requiring to be emptied, and without giving indication of their existence. We must not be supposed as advocating such retention. An amendment to the resolution moved, substituting Mr. Rammell's name for that of Mr. Wickstead. Mr. R. having already prepared plans for the Leamington drainage), was negatived, and the original motion was carried by a majority of seven to two, three members not voting at all.

Norfolk and Norwich Archæological Society.—A general meeting of the members of this society was held at Norwich, on Thursday in last week. The attendance was numerous. The mayor (Mr. Bignold) was in the chair. Mr. Harrod read a communication from Mr. King, York herald, in reference to the arms in the Norwich Cathedral. All the three shields had been found to relate to the family of the Bulleyns, one of whom, Anne, married Henry VIII. The Rev. J. Gunn read a paper respecting the parishes of Irstead and Barton Turf. Mr. Harrod laid on the table a plan of Walsingham Abbey, as indicated by the late excavations. He said Mr. Lee Warner was quietly continuing the excavations with a view to further discoveries. The Rev. C. R. Manning read some notes on the architecture of Hellington Church. Some account of this and the preceding paper will be found in the *Norfolk Chronicle* of last week. The mayor stated that the memorial to the late bishop would soon be open to public inspection.

Exeter Diocesan Architectural Society.—A quarterly meeting of this society was held on Thursday in last week, in the College Hall, Exeter, the Rev. Canon Bull in the chair. The Rev. P. Carlyon, one of the secretaries, read a report of the committee, which related mainly to the preparation of another part of the transactions of the society, and to the subject of an illustration contemplated, namely, an engraving of the mural painting recently discovered in the north transept of Exeter Cathedral. Day, of London, is to prepare this illustration from a drawing by Mr. Ashworth. The treasurer read his report. Various presents having been acknowledged, Mr. Crabbe read a paper on the Monumental Brasses of Devonshire. Papers were also read which were contributed by Mr. J. Furneaux, of Swilly, and Mr. C. Spence, of Stoke.

Tilbury and Southend Railway.—This railway was opened for traffic on the 13th instant. I wish you would most earnestly impress upon the directors the necessity of immediately erecting a *foot*-bridge over the rails at Grays. The station being in immediate proximity to the main street, I am convinced that accidents will otherwise be inevitable. The carriage traffic is small, but the reverse is the case with respect to foot passengers.

B.

GAS.—The Banbury Gaslight and Coke Company have reduced the price of their gas from 6s. 8d. to 5s. per 1,000 cubic feet, the cost of coals being 21s. 4d. per ton. The company anticipate a very large increase in their consumption in consequence. This is the right way to go to work. Companies are sadly mistaken who act on a contrary principle,—refusing reduction *because* their high prices do not yield such profits as *enable* them to lower their prices, or *waiting* for increased consumption ere they offer such inducement as ought to *precede*, and is sure to command it if liberally resolved on. We hope not only that the example shown by the Banbury company will be followed by others, but that it will shortly be repeated by that company itself, so that by degrees they may extend the consumption of their gas throughout the greater part of the private dwellings of the inhabitants, which they are certain to do if it be kept pure, and arrangements be otherwise properly made.——The new and old companies at Sheffield, it seems, are settling their differences by amalgamation, on an understanding that the maximum price for their gas shall be 3s. 6d. and their dividend limited to 7½ per cent.——The Commercial Gas Company, at their half-yearly meeting lately held, declared a dividend at the rate of 6 per cent. per annum, but whether on paid-up capital only or on a greater amount we are not informed.——The Southport gas (now made from cannel, it would seem, and not from resin and water) is said to be yielding a profit of 8 per cent. on the capital invested, after paying all expenses; and the chairman states that but for the great rise in the price of cannel it would have been 18 per cent. An improved oven, recently erected, is stated to produce more than double the usual quantity of gas, while using less fuel. This oven contains about half a ton less of metal than one of the old ones. The quantity obtained from a ton of the rich cannel they use is stated to exceed 40,000 cubic feet of pure and brilliant gas, "entirely free from the noxious combinations so objectionable in ordinary gas, of which we have recently heard so much:" not a trace of sulphur, it is said, can be found in it, as recently certified by the gas engineer at Liverpool, Mr. King.

VERMIN.—In reply to "A Victim's" question as to the best way to destroy his numerous army of fleas, let me say that, if he will obtain plenty of turpentine, and wash the floor-boards well with it, he will not be again troubled with their company "above board," and as they cannot subsist upon wood and plaster, they will soon starve to death.—RICARDO. Another correspondent (T. G.) advises washing the floors with boiling water and soft soap; filling in any space there may be between floor and skirting with a slip of deal, covering any joints in the floor with slips of cartridge paper, and lastly, rubbing a solution of sublimate of mercury over the whole. ——The basement floors of many houses in the neighbourhood of Bedford-square are much infested with thousands of minute insects, in colour, size, and shape, much resembling a grain of Cayenne pepper: they find their way into the eatables, and are otherwise very troublesome. If any of your readers can give me any information respecting the nature and habits of these domestic intruders, and suggest a mode of exterminating them, I shall feel greatly indebted.—A. S.

BURIED ALIVE.—A melancholy accident occurred in the old square at Ashton lately, by which one man lost his life, and two others narrowly escaped a speedy death. The deceased and several others were sinking to a main sewer, 24 feet below the surface, and had got to the top of the sewer when the sides gave way: two succeeded in extricating themselves, but the deceased was buried up to the middle, and got one of his legs under a plank, when a sack was put round him, and then the rope of the windlass, by which an attempt was made to wind him up, but the poor fellow called out to them to stop, as they were breaking his leg. The moment they did so, several yards of earth fell upon him, actually burying him alive. Every exertion was used to remove the earth, but such was its loose character, that it slipped down almost as fast as they wound it up in buckets. The accident occurred about half-past four p.m. and it was half-past two next morning before they got out the body.

PHOTOGRAPHS OF GREEK ARCHITECTURAL ANTIQUITIES.—On the walls of the Society of Arts, at the Adelphi, there were lately suspended a number of photographic views, by Mr. Robertson, of Constantinople, in different parts of Greece. The collection comprises forty views in Athens, including the Parthenon, the Temple of Theseus, the Erectheum, the Temple of Victory, the Tower of the Winds, &c.: three views at Egina, two at Corinth, two at Sunium, and, in addition, views of the friezes of the Parthenon, and alto-relievos in the Temple of Victory. The views were only to remain for about ten days, but we hope that many of our professional and art-loving readers may yet have time to see them.

WARRINGTON MUSEUM AND LIBRARY.—At a meeting of the Warrington town council, held on the 9th February, the museum and library committee stated in a report that Mr. J. Wilson Patten, M.P. had offered the free gift of a site in Bold-street, previously fixed upon as the most eligible in the town, for the erection of a new museum and library, and that plans had been prepared by Mr. Dobson, of Newcastle-upon-Tyne, architect. To carry out the design, 4,000*l.* was required. The council at once tendered to Mr. Patten their cordial thanks for his offer, and the mayor was requested to convene public meetings of the clergy, gentry, and inhabitants of Warrington, to consider the steps to be taken for the erection of a new museum building. A public meeting of the inhabitants, convened by the mayor, was accordingly held on Thursday in last week. Lord Stanley took part in the proceedings, in the course of which appropriate resolutions favourable to the objects in view were passed, and a subscription-list opened. The museum rate was recommended to the council in aid.

AN ARCHITECT.—There is an excellent story on record of an architect repudiating any connexion with the building fraternity in the case of the late eminent and talented Mr. Alexander, the architect of Rochesterbridge and several other fine buildings in the county of Kent. He was under cross-examination, in a special jury cause at Maidstone, by Serjeant—afterwards Baron—Garrow, who wished to detract from the weight of his testimony, and who, after asking him what was his name, proceeded thus: "You are a builder, I believe?" "No, sir, I am not a builder, I am an architect." "Ah! well; architect or builder, builder or architect, they are much the same I suppose?" "I beg your pardon, sir, I cannot admit that: I consider them to be totally different." "Oh, indeed!—perhaps you will state wherein this great difference consists?" "An architect, sir, prepares the plans, conceives the design, draws out the specifications,—in short, supplies the mind: the builder is merely the bricklayer or the carpenter; the builder, in fact, is the machine. the architect the power that puts the machine together, and sets it going." "Oh, very well, Mr. Architect, that will do; and now, after your very ingenious distinction without a difference, perhaps you can inform the court who was the architect of the Tower of Babel?" And now mark the reply—which, for promptness and wit, is perhaps not to be rivalled in the whole history of rejoinder:—"There was no architect, sir,—and hence the confusion!"—*Extract from a Lecture by Rev. J. Jessop.*

REVIVAL OF TOWN AND VILLAGE GREENS.—At a meeting of the West London Anti-Enclosure and Field Garden Allotment Society at Paddington, on 17th inst. the following resolution was agreed to:—"That a village green for temperance festivals having been proposed, the secretary write to the secretaries of the London temperance societies to solicit their co-operation. Each subscriber would be entitled to one of the gardens around such intended green, and a share in the profits arising from festivals."

ENGINEERS' BORING MACHINE.—A new boring machine, of great dimensions, has been made at Glasgow for one of Mr. R. Napier's engine shops. It weighs thirty tons, and stands 25 feet high. The height of the entablature of the frame is 15 feet, and the width 14 feet. The frame-work is composed of two upright columns, surmounted by an entablature, below which the wheels which give power to the boring tool are supported on a cross beam. This tool, which can work at all speeds, from one revolution in 2½ minutes to sixteen revolutions in 1 minute, is capable of boring a hole in solid iron of 10 inches, or a cylinder of 7 feet diameter, and can take any feed, from 1-40th to 1-8th of an inch per revolution of the spindle, and is capable of boring a hole 7 feet 8 inches in length.

SALARY OF SURVEYORS.—I enclose an advertisement for the two offices of surveyor and inspector of nuisances for this parish (Battle), offering the salary of 40*l.* per annum for an efficient person to fill these offices, the duties of which consist of the surveying of about eleven miles of highways, besides footways and pavements, the surveying of houses and property in a parish of upwards of 3,000 inhabitants, and comprising about 8,000 acres of land. Attention to the drainage of the town, and also the supply of water. Inspector of nuisances in the entire parish, keeping accounts, and attending at all meetings of the board, &c. &c. Read the duties of surveyor and inspector of nuisances in the bye-laws issued by the General Board of Health, and then say what you think of the above salary.—A SURVEYOR.

SURREY ARCHÆOLOGICAL SOCIETY.—The inaugural general meeting of this society will be held on the 10th of May, at the Bridge-house Hotel, London-bridge, Southwark, at seven o'clock in the evening. Mr. Henry Drummond, M.P. will preside. Papers on various subjects will be read, and articles of antiquarian interest exhibited.

SLATE.—Permit me to call the attention of builders and others to the use of slate as an economical covering for Dormer tops. There are some in this neighbourhood (Camberwell) which have stood the test of thirty years' trial. The thickness of slate should be about half an inch, and if threaded, laid with a proper fall, and secured with countersunk screws put in with white lead, they will be found an effectual substitute for lead at a saving of about 50 per cent.—T. J. P.

LODGINGS WANTED.—Mr. Justice Coleridge has ordered the high sheriff of Warwickshire to be fined 500*l.* for not providing the judge of assize with convenient and wholesome lodgings at Coventry.

TENDERS

Received on the 24th inst. for one first-rate house and three warehouses, New Cannon-street, City. Mr. Thomas Hague, architect. Quantities supplied by Mr. Marshall:—

Messrs. Jackson	£14,928	0	0

TO CARPENTERS AND BUILDERS.

A YOUNG MAN, aged 20, wishes EMPLOYMENT as a JOINER, would not object engaging for a term. Addre s A. B 1 Gold North street, Red Lion square

TO ARCHITECTS.

THE Advertiser, who is a neat and expeditious draughtsman, and accustomed to prepare fair and working details, &c. is desirous of a RE ENGAGEMENT.—Address, G. G. 1, Brunswick-place, Brompton.

TO BUILDERS.

THE Advertiser is desirous of IMPROVING his knowledge of GENERAL BUILDING. Has been used to the bench, and is competent to make tracings and keep a set of books, and willing to make himself generally useful. If he could live with the family would consider it equivalent for his services.—Address, H. J. 320, Strand.

TO ARCHITECTS.

THE Advertisers' time not being fully occupied by their professional duties, they undertake making drawings as I specimens for architects, on moderate terms. Reference given, if required, to one of the leading members of the profession.—Address, A. and O. 11, Bloomsbury-street.

TO ARCHITECTS.

THE Advertiser is desirous of a RE-ENGAGEMENT as ASSISTANT in a London office. Has been accustomed to preparing fair and working drawings, specifications, &c. of ecclesiastical and domestic buildings in well-known offices.—Address, A. B Universal Newsroom, 28, High Holborn.

TO ARCHITECTS.

THE Advertiser, who can have the highest testimonials of ability from his late employer, an eminent member of the profession in London, is desirous of an ENGAGEMENT as ASSISTANT.—Address, H. B Castle and Lamb's Advertising Office, Ball Head court, Newgate-street.

PARTNERSHIP.—A Builder and Timber Merchant in the West of England is willing to treat with an active man, who is well acquainted with the timber trade, as a PARTNER. Capital required from 1,000l. to 1,500l.—Address, D. *Bristol Mercury* Office.

WEEKLY HOUSE PROPERTY of the best kind and class, well let, to produce the rent of 20l 16s. per annum. Secure 20 per cent. 200l will be required to pay full twelve per cent. after all deductions. Ground-rent low, lease seventy years.—Apply to Mr. PAGET'S, Oil Warehouse, seven doors from the Hall's-pond Gate, Islington.

NEW SHOPS in a populous and most eligible part of Westminster.—There are TO BE LET, on LEASE, with covenant for renewal, or SOLD, at a ground rent, together or separate, two very substantially and handsomely built HOUSES, with plate-glass fronts, and adapted for almost any business. Good shops are much required. The sites immediately contiguous to the intended Westminster Railway Terminus. For particulars apply to Mr. H. S RIDLEY, Architect and Surveyor, 31, Vincent-square, Westminster.

TO RAILWAY COMPANIES, CONTRACTORS, COAL-MASTERS, AND OTHERS

TO BE SOLD by PRIVATE CONTRACT, TEN PERMANENT RAILWAY TRUCKS, made of the best English materials, with patent axles, nearly five tons and upwards, are perfectly new and fit for immediate use. They are suitable for a company's goods or coal-trucks, or a contractor's ballast-trucks, and will be sold a bargain. Also a Four Wheeled coupled Engine, recently put in good repair.—For particulars, &c. address D P Post-office, East Grinstead, Sussex

ARCHITECTURAL, CIVIL ENGINEERING, and SURVEYING OFFICES, established by Messrs HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c.

For preparing Gentlemen for Architects, Engineers, Surveyors, Land Agents, Draught-men, Measurers, Valuers, &c. and for giving EVENING INSTRUCTION, in Architectural and Civil Engineering, Drawing and Designing, Making, Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Preparing Estimates, &c. &c. Terms, One Guinea per Quarter.—For prospectuses, &c. apply at the Offices, 24, Guildford street, Russell-square.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.

PLANS, ELEVATIONS, DRAWINGS of MACHINERY, &c. lithographed or engraved.

BUILDERS' and CONTRACTORS' ACCOUNT-BOOKS; DRAWING PAPERS; ditto, mounted and continuous; TRACING PAPER and CLOTH; ditto in lengths.

GENERAL STATIONERY, from the use of BUILDERS, ARCHITECTS, SURVEYORS, and ENGINEERS, at the lowest current rates.

WATERLOW and SONS, 65 to 68, London-wall; and 49, Parliament street, London.

Contracts for the supply of large establishments.

TO ARCHITECTS.

QUANTITIES.—A young Architect of great practical experience in practice in the City would be glad to ARRANGE with Gentlemen preparing QUANTITIES.—Letters, addressed "ARCHITECT" care of Mr. Watkins, 1, Swithin's-lane, will meet with immediate attention.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Bruges," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such, he feels sure of giving satisfaction to those who may wish to have their work nicely executed at a very moderate charge, and punctual to time. J. Mack. will be glad to make designs for the decoration of rooms, or public buildings, in any part of the kingdom, with estimates.—Tenders for general repairs.

C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Munster-street, Regent's-park. 30s. per cwt. allowed for Old Lead. C. L. begs to call the attention of the Trade, Builders, &c to his stock of painters' colourmans, plug ditto, brasses, &c. sheet-lead, and patent pipe-plate, patent plate, sheet and crown glass, white lead, oils, colours, &c. Glass in numbers for doors or pavements, vaults, &c in iron frames or not.

LITHOGRAPHY.—C. MOODY executes every description of LITHOGRAPHY for Professional persons of the Trade. Portraits, landscapes, &c sketched or copied from the roughest drawings. Engineers' and Mechanical drawings correctly detailed in fac, crimped tints. Presses, stones, inks, &c. Artists and amateurs supplied with sketch-books, portfolios, and every requisite for drawing and painting. Specimens of every class of work for inspection; estimates given; instructions afforded.—257, High Holborn.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 200 miles of railway

Extract from the half-yearly report of the Directors of the Midland Railway, February 14, 1854 —

"An important feature in the contract for the maintenance of the Permanent Way, is that the contractors are bound to reduce their charges 50l. per mile per annum, whenever the Rail Joint, or certain other improvements, are hereafter introduced."

Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager; or Mr. WILLIAM HOWDEN, the Secretary, 26, Great George-street, Westminster.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. It being transparent, blinds are unnecessary, and when used in Greenhouses no scorching ensues, its NON-TRANSPARENCY and strength rendering it eminently suitable for the Glazing of Observatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish, Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE,

57, BISHOPSGATE-STREET WITHOUT, LONDON.

JAMES RHODES,

No. 6, MACCLESFIELD STREET NORTH, CITY-ROAD, LONDON

MANUFACTURER OF SASHES AND FRAMES, DOORS, &c. AND EVERY DESCRIPTION OF HOUSE JOINERY.

Glazed goods securely packed for the country. Prices on application at the Counting-house, as above.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 12 lbs. to the square of 10 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

ASPHALTE PAVEMENT.—HENRY WRIGHT is prepared to lay down his Asphalte Pavement, which is particularly adapted for railway platforms, footpaths, garden-paths, court-yards, and school-yards, 21 in. to 3 in. thick, from 1s. 6d. to 2s. per square yard. Address, 32, Bucklersbury, City.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material to the best manner. Asphalte for Railway Arches, 30s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PILKINGTON, PORONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—R. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

HENRY PASK (late Johnson and Pask), BAKER-STREET, Clerkenwell, Sash, Shop Front, and Door Maker to the Trade, begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOXELL, Patentee, 96, Regent street, and at his Steam works, 133, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted therewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

FARMER and CO. Sash, Door, and Staircase Manufacturers. Counting House Fittings, Shop and Public house Fronts on the shortest notice. Estimates given for contracts of any description. By enclosing a postage stamp, a list of prices will be returned for every kind of joinery work, &c.—23, St. Johnstreet-road, and No. 1, Edward street, Pentonville, Pentonville.

LEONARD LUYDEN, Manufacturer of Doors, Sashes, and Frames, and Joiner to the Trade, 59, Grange-road, Bermondsey, respectfully invites Builders and the Trade in general to an inspection of his Stock of Goods from which they can always be supplied with every kind of Joiners' work, which for superiority of workmanship, material, and low prices, cannot be excelled by any house in London. P.S. A full list of prices on application.

IMPROVEMENT IN WOOD MOULDINGS. JAMES SIMMONS, Improved Moulding Manufacturer, respectfully returns thanks to his friends and customers for the liberal patronage already conferred, and begs to say his present Stock will be found worthy their attention for variety and quality, being manufactured from the best dry pine only.—Steam Works, 3, North-road, Hollowood, Paddington Road.

N.B. J. S. also begs to call the attention of his customers and the public that Mr. Hurt, his late traveller and collector, has no authority to receive money or transact business of any kind on his account.

BELGIAN SHEET-GLASS.—The cheapest house and the best in quality for the above, is at W. HOPKINS'S, London-street, Fenchurch-street. Sparkling from the kiln, 16 oz. 18 inches by 14 inches, three and fourths, 16 oz. Sheet, cut to sizes, at 2s. 4d.; new sashes glazed large sizes, at 3d. to 3½d.; Ground Glass, 4d. in sheets.—Terms, cash.

MOORE'S PATENT MOVABLE GLASS VENTILATOR, for Windows, Partitions, Fact ries, Workshops, Warehouses, Greenhouses, Cottages, Stabling, Granaries, and other Buildings, in Town and Private Carriages & For Frames, Barries, Outbuildings, &c. The Ventilator can be made to form a complete window, iron frames and rough plate glass, &c. Ventilators made to any size, and to most forms of sashes; also for sky or fan lights, and other purposes. A considerable saving and additional safety by having fixed window sashes.

MOORE'S PATENT "LEVER FENTILATOR," forming a regular current of air, is calculated to effect all that is required for improving animal and vegetable health. The whole air is emitted at the opening left for that purpose. To shopkeepers they are particularly recommended, as from their capabilities of removing the foul air caused by the gas in the shop and windows they effectually preserve the stock in good condition, and prevent explosion of gas.

Church and House Clock makers to the Hon. Board of Ordnance, the Russian Government, and the Emperor of China.

Manufactory, Sekford-works, St. James's-walk, Clerkenwell, London.

REVOLUTION in SHOP FRONTS.—THE PATENT CRYSTAL WINDOW entirely supersedes the use of metal or wood sash bars, by the exclusive employment of PLATE GLASS for the entire window. The great advantages of this material over all others at present employed consist in the perfect transmission of light, elegance of appearance, impenetrability from rust or decay, the great facility with which it may be cleaned, and the economy of labor involved, compared with metal. Another highly ornamental feature is, that sash-bars may be obtained, either plain or colored. Examples of shop-fronts recently executed (first class) may be seen at the London Mantle and Shawl Company's, North's decorative Paris churchyard; at Birmingham, Leamington, Worcester, Aberavenny, &c. &c. Full particulars may be obtained upon application to the Patentees, Messrs. LLOYD and SUMMERFIELD, Park Glass Works, Birmingham. Estimates for works, and specimens of all the applications of this invention may be obtained also of the following agents:—London: Mr. Mabley, 10, Buckingham-street, Strand; Bristol: Messrs. Hall and Sons; Dublin: Mr. M. Brooks, 19, Middle Abbey-street.

N.B. Flint glass is applied to sash-bars for the ordinary windows, glass roofing, show-cases for goods, glass doors, &c. Messrs. L. and S. also manufacture Bevelled and Embossed Plate for Show-case, looking glass frames, troughs for galvanic batteries (some of which are used by them in the Panopticon, and have received the approbation of the highest scientific authorities), and works of every character where flint glass can be employed.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLORED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration. All applications for estimates and lists of prices to be made at their warehouse, 318, OXFORD-STREET.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE GLASS WAREHOUSE, 26, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

GOOD 3rds 16 oz. FOREIGN GLASS, in cases of 200 feet each, average size, 40 by 30, at 42s. per case; 4th ditto, 34s. Also 16 oz. ground do. do. 4d. per foot; Crown and 16 oz. Sheet squares in 100 feet boxes, varying from 14 in. to 40 inches, 2 per foot, 4 inch rough Plate Tiles, 12s. per dozen. Also, Crown and Sheet Glass, Looking Plates, British and Patent Plate, Enamel and Stained Glass, Glass Bottles, & Sheet Lead Pipe. White Lead, Oils, Turpentine, Colours &c.—G. FARMILOE and SON, 118, St. John-street, Smithfield, London.

CHANDELIERS.—TO BE SOLD, several large and handsome GAS CHANDELIERS, in metal and papier maché, and a quantity of Branch Fittings, suitable for a large public room, &c. Apply at 5, Little Queen-street, Holborn.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 101, New Bond-st. and 3, Queen street, Cheapside, London, beg to call the following PRICES of WINDOW BLINDS, which in the best manner commenced as long made in the best manner. Venetian blinds, per foot, 1½d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze window blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s.; transparent blinds in great variety. Estimates, with drawings, and prices and discounts to builders and the trade, forwarded on application, post free.

WINDOW-BLINDS FOR THE TRADE ONLY.—The only Blind maker in London now trading exclusively for the Trade is WILLIAMS, 1, Rutland-street, Brompton, Manufacturer of every description of the best and most desperate blinds, outside shop-blinds in iron and blinds and awning blinds, executed on the most approved principles lower than any other house. The trade supplied with springs. A list of prices forwarded post free, on application to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

THE EXHIBITION of the ROYAL ACADEMY will open on MONDAY NEXT, the 1st of MAY, at TWELVE o'clock. Admission, One Shilling. Catalogue, One Shilling.

JOHN PRESCOTT KNIGHT, R.A. Secretary.

ATTRACTIVE NOVELTIES

R. S. NEWALL and CO'S Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.

156, Strand, London.

67, Hope-street, Glasgow.

82, Lever-street, Manchester.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Covering Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY of COLOUR, and APPLICABILITY to stucco or any surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT. This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and desirableness for INTERNAL as well as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, when it may be painted and repeated; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT. The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough Surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 3 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, combining frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that purity in their productions which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK——LONDON——PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is now called for permanency of colour, lasting body, brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be used in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material or manufacture so as to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNES ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO., and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. wholesale agents, 62, King William-street, City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent.)

CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this innocuous substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne, or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which it cannot be made to receive stamp, at once as the best cement of the day for work where all the above qualities are required. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian, and other cements, and all other Cements in use for building purposes, Sun Elms, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of lime is held for buildings in wet and damp situations, such as wharf walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 18, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties, that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

ITALIAN POZZOLANA.—A few hundred TONS of this article, of best quality, on SALE.—Apply to G. and T. EARLE, Hull.

BRITON LIFE ASSOCIATION, 36A, Moorgate-street.

Assurers in this Office may receive the amount assured during Life, without increased Premium.

Loans can all times be obtained and repaid by small instalments.

Investment Policies secure a payment of the amount assured in 13, 10, or 7 years, or at death if it should previously occur, on which advances can be obtained.

Persons about to subscribe to Building Societies, will find the Building Policies issued by this Office combine the Assurance of Life with all the advantages derived from a Building Society.

Medical Gentlemen remunerated in all cases for their reports.

Annuities granted. All descriptions of Life Assurance transacted.

Policies indisputable. Office hours from 10 a.m. to 4 p.m.
EDWARD PARSONS, Secretary.

ALBERT LIFE ASSURANCE COMPANY, 11, Waterloo-place, Pall-mall. LOANS granted, in connection with Life Assurance, on freehold, leasehold, and personal security.—Eastern Branch, 7, Finsbury-square.
W. S. VARDY, Manager.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSE'S WHOLESALE WAREHOUSE, 21, GREAT PORTLAND STREET, Oxford street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, THIRTY PER CENT CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFREY, ALLEN and CO. Paper Stainers, beg to call the attention of the trade to their patterns of Paper hangings for the present season, which comprise every description of style and quality, from the most elaborate decoration, to the cheapest paper that can be produced, and which they are prepared to offer at very low prices. J. A. and CO. also respectfully inform the trade that they have OPENED a WAREHOUSE at No. 500, OXFORD-STREET, where all goods can be obtained on the same terms as at the Factory.

GUTTA PERCHA PAPER FOR DAMP WALLS. J. A. and CO. are the sole vendors of this well-known remedy for Damp Walls.

115, Whitechapel, near the Obelisk, and 500, Oxford-street.

PAPERHANGINGS.—TRUMBLE and COOKE, 3, Oxford-street, London (Manufactory, Leeds), respectfully inform the Trade and Builders generally that they have now an immense STOCK of PAPERHANGINGS manufactured from their new patterns (for the present season), consisting of Flock, Gold, Satins, Oaks, Granites, Marbles, and Machine Goods which they can supply on terms highly advantageous to the purchaser.

PAPER-HANGINGS.—R. HORNE, PAPER-HANGING MANUFACTURER, 41, Gracechurch-street, City, invites builders and the trade to inspect his extensive stock of NEW DESIGNS in PAPER-HANGINGS, which, by the aid of powerful machinery, he is enabled to offer at the following prices, in stock quantities, for cash only, viz.:—

Stout lining paper	5d.
Superior ditto	6d. and 7d.
Bed-room papers, in great variety	at 5d.
An excellent oak paper	at 8d.
Sitting-room ditto, on blended grounds	7d. to 9d.
Hand-made marbles	9d. to 1s. 6d.
Gold satin papers	1s. 6d. to 2s. 6d.
Flock papers	2s. 6d. to 2s. 6d.
Hand-made granites	6d. to 1s. 6d.

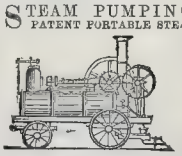
Per Piece.

Every novelty in French and English panelled decoration always on hand; also excellent imitation of fancy woods.

Numerous patterns sent into the country, by post, showing the style and quality of the above, on receipt of two stamps, and the goods despatched with promptitude on receipt of a remittance to the amount of the order given.

TO CONTRACTORS AND OTHERS.

A PPOLD PUMP and STEAM-ENGINE for SALE.—TO BE SOLD, a capital HIGH-PRESSURE STEAM-ENGINE, of 8-horse power, with all the valves complete. Also an APPOLD PUMP, capable of raising 2,500 gallons of water per minute, with the driving machinery as attached to the horse engine. Also a MILL for grinding mortar. The whole are in good working condition, and are to be sold cheap, as the works upon which they have been used are finished, and the proprietors have no further use for them. The engine may be seen at the new Harbour Works, Shoreham, near Brighton, and for terms particulars furnished, upon application to Messrs. EASTON and AMOS, Grove, Southwark.



JAMES MICHIE, Engineer, Battersea-park, Nine Elms, Manufacturer of all kinds of STEAM ENGINES (portable and stationary), Pumping Machines, Cranes, Trucks, &c.

N.B. An 8-horse high-pressure engine for sale.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six horse power to twenty five horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS, Engineers and Portable Engine Makers, &c. Blackfriars-road. These engines have been successfully employed for years.

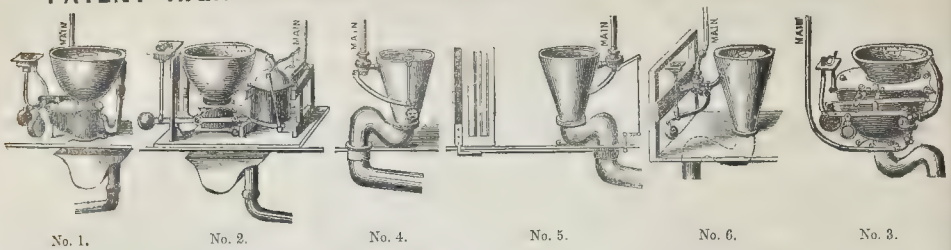
STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

J. TYLOR AND SONS'

PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

No. 1. No. 2. No. 4. No. 5. No. 6. No. 3.

THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

No. 1.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET. With Blue Basin, sunk opal handle, 4l. 4s.
No. 2. J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE CLOSET, WITH PATENT SERVICE BOX ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after use to any desired height. With Blue Basin, sunk opal handle, 5l. 10s.
No. 3. J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat brass handle, 2l. 13s. 6d. With Blue Basin and sunk opal handle, 2l. 3s.
No. 4. J. TYLOR AND SONS' PATENT HIGH PRESSURE HOPPER CLOSET. With Enamelled Iron Hopper, sunk brass handle, and cast iron trap, 1l. 13s. Enamelled Iron Trap, extra, 5s. 6d.
No. 5. J. TYLOR AND SONS' PATENT HIGH PRESSURE HOPPER CLOSET, TO WORK FROM THE DOOR. With Enamelled Iron Hopper, cast iron trap, and door action, 1l. 13s. Extra for Enamelled Iron Trap, 4s. 6d. This Closet is particularly adapted for Public Buildings, for which purpose it is made with a larger Valve. With large Valve, Enamelled Iron Hopper and Door Action, 2l. 2s. Enamelled Iron Trap, 6s. 6d. extra.
No. 6. J. TYLOR AND SONS' PATENT HIGH PRESSURE SPOOL VALVE. This Valve is particularly short in its action. 4-inch Valve, with sunk handle, 14s. 6d.

J. TYLOR AND SON'S PATENT HIGH-PRESSURE BALL-VALVES.

These Ball valves can be recommended with the greatest confidence as the most powerful and easy action Ball-valve ever offered to the public. They are entirely free from all those objections of fittings such as spindles, slides, and other fittings, so fatal to Ball valves generally. They are perfectly quiet in action, and cannot by any means shake at all, there being no point of friction from fittings in the construction. They are so arranged as to accumulate the power of closing against the column of water when most required, and are warranted to stand any known pressure of water.

	½	¾	1	1¼	1 inch.
Complete with Balls:—Plain shank	5s.	6s.	6s. 6d.	7s. 3d.	12s. 0d. each
" " Screw ferrule	6s.	6s. 6d.	7s. 0d.	8s. 3d.	14s. 0d. each.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B.—ARCHITECTS ARE RESPECTFULLY INFORMED THAT THESE ARE CORRECT PRICES FOR INSERTING IN SPECIFICATIONS.

J. TYLOR AND SONS', WARWICK-LANE, NEWGATE-STREET, LONDON.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, soaps, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
6, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 2-inch single to 12-inch barrel, is also kept, fitted complete for hand or steam power, and can be delivered at the shortest

BENJAMIN FOWLER'S
ENGINE PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

STEAM-ENGINES, of various sizes, from two-horse power upwards, always on stock, under the most improved principles, and of the very best quality; single and double-cylinder engines always ready for immediate delivery; portable engines; saw benches and saw frames, with all the most recent improvements, and every description of machinery manufactured by ANDREW MARSHALL and CO., Woodside Iron Works, Windsor-terrace, City-road, and 173, Upper Thames-street.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H for drawing on wood.	F F light and shading.
H H H for architectural use.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
B B B ditto ditto.	
M medium.	

Sold by all the principal Stationers in town or country.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON Superior Process) Works at the Regent's Canal-basin, Commercial-road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges, Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water pipes, Hydrant Castings, Furnace-bars, Baths, Buckets, &c. wholesale retail and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and Buildings taxed complete. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c. The Norfolk Company, Water Companies, Towns, Baths, Brewers, and Manufacturers of any description, can be supplied with any quantity by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 16, Cannon-street, Portsmouth. Pumps and machinery for raising water from deep wells being too, and well-pipes, for exportation. Men and tools supplied to bore for railroads, minerals, &c.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of gutta percha tubing, the Gutta Percha Company have pleasure in answering therein to the following letter received from Messrs. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852. In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years. We have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars contain instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention. WILLIAM PIGGOTT, 16, Pore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

WILLIAM NORTHEN'S

WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK, MANUFACTURER OF

GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.

65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY, COMMERCIAL-ROAD EAST.

Waterloo-set Pan with Syphon-Trap, 7s. 6d. each.

Waterclose Pan with Syphon-Trap complete, price 7s. 6d. each.

A LARGE ASSORTMENT OF STRAIGHT TUBES, INVERT AND LENGTHS.
Bends, Elbows, Traps, Gulley-Traps, Flap Traps, Syphon-Traps, &c. always on hand.

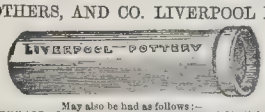
DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B These are made without the discharge-hole being turned downwards.



The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. J. TURNER & Son's South Wharf, Praed-street, Paddington; and at COLWILL, Brothers, 33, Brydges-street Covent Garden.
Drawings and List of Prices will be forwarded free on application.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S

DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

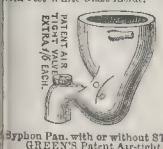
ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

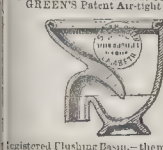
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

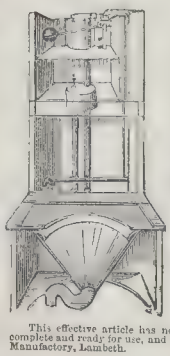


PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.



STEPHEN GREEN'S IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hoppers and other Pans, with best White Glaze inside.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin.—the most effective Syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGARTH, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT

LADDERS, BARROWS, &c. for SALE or HIRE

—G. ELL invites the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excelsior, bricklayers', and other Barrows; Painters' Machines; Trestle, Steps, &c. he has always on hand, at a very low scale of prices.

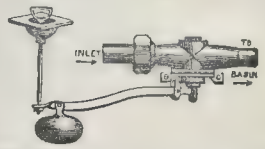
Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead road.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inches to 36 inches. Patent Hydrants, self-closing Cocks, Fire and other Pumps, Water Apparatus, Baths, &c. Drawings made, and estimates given by FREEMAN ROE, Hydraulic, sanitary, and test Engineer, 70, Strand, and Upper Marsh, Lambeth.

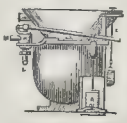
JENNINGS'S IMPERISHABLE WATER-CLOSETS.



One of these Closets, complete with Self closing Stool Cock, will be sent to any part on RECEIPT of a POST-OFFICE ORDER for THIRTY SHILLINGS.

In their different varieties of ware they are fit for a MANSION or COTTAGE. No complication of cranks or wires. Any number of closets may be supplied from one main, be the PRESSURE HIGH or LOW.

A Book containing particulars of all JENNINGS'S SANITARY IMPROVEMENTS can be had on application, or by post if two stamps are sent to

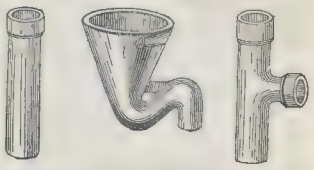


GEORGE JENNINGS,
ENGINEER AND PLUMBERS' BRASSFOUNDER,
29, Great Charlotte-street, Blackfriars road.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

GREAT SIMPLIFICATION and Economy in FIXING CLOSETS.



By the use of Underhay's Patent Regulators, the separate cistern, service-box, valve, cranks, and wires are dispensed with, making a closet as simple to fix as a bib-cock, and yet ensuring a perfect flush of water.

The Manufacturers, CHARLES BOTTEN and SON, solicit a call from all parties interested, they having Pan, Valve, Self-acting, and Jennings's Closets fitted with this apparatus, and fixed for inspection, or will forward drawings of the same.

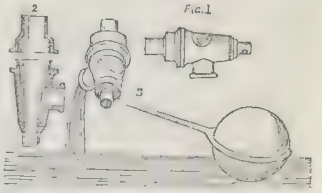
CHARLES BOTTEN and SON, Brass Founders, Engineers, Gas Meter and Fitting Manufacturers, Crawford-passage, Clerkenwell.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

TO WATER COMPANIES AND PLUMBERS.

DEVEY and DALE'S CYLINDER BALL-VALVE and BALL, Registered Oct. 28, 1853. No. 3,636.



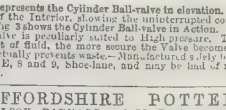


Fig. 1 represents the Cylinder Ball-valve in elevation. Fig. 2 is a Section of the Interior, showing the uninterrupted course of the Fluid. Fig. 3 shows the Cylinder Ball-valve in Action.

This Valve is peculiarly suited to High pressure. The greater the weight of fluid, the more secure the Valve becomes, and the more effectually prevents waste.—Manufactured solely by DEVEY and DALE, 8 and 9, Shoe-lane, and may be had of respectable Plumbers within five miles of London.

STAFFORDSHIRE POTTERY.—

WILCOX, BARNARD, and CO. Earthenware Manufacturers, Mill-wall, Poplar. THE BUILDER.

SALES BY AUCTION.

PENGE AND SYDENHAM, KENT, in the immediate vicinity of the Crystal Palace.—Very important Freehold Building Land, comprising about Nineteen Acres in Lands, of which possession will

MESSRS. FAREBROTHER, CLARK, and LYE are instructed to SELL, at GARRAWAY'S on MONDAY, May 1, in One Lot, by direction of the Trustees of the late John Laurie, esq., deceased, that valuable FREEHOLD ESTATE, situate at the junction of the Penge-road and Anerley-road, and fronting the latter for a distance of about 400 feet, having the high road and the entrance of the Penge Station of the London, Chatham, and Dover Railway on the north side, and the Croydon and Sydenham Railways with the Penge Station on the south side, and within a few minutes' walk of the Crystal Palace and Sydenham Stations. The whole estate contains about Nine Acres, and presents one of the most eligible sites for the erection of first-class residences now so much sought after in the rapidly rising neighbourhood. The property is also admirably adapted for building purposes by the retiring and remunerative tradesman, as well as for the builder, together with the lovely and unintercepted views over the whole, together with the lovely and picturesque scenery in the neighbourhood. The property forms the immediate boundary of the Crystal Palace Park and Mr. Meeds' extensive Nursery Grounds, and is the only available land in the immediate neighbourhood. Immediate possession will be given. May be viewed, and particulars obtained on the premises; at the Inns in the neighbourhood; of A. Laurie, Esq., Solicitor, Lancaster-place, Strand; at Garraway's, and at the Crystal Palace Company's Offices, Cockspur-street, Pall-mall East.

LEYTON AND WALTHAMSTOW.—Important Freehold Estates, comprising a Mansion known as the Poplars, with beautiful park-like lands, a Private Residence, with excellent Villas and Plots of building

MESSRS. FAREBROTHER, CLARK, and LYE are directed to SELL, at GARRAWAY'S, on WEDNESDAY, MAY 3, in lots unexpectedly advantageous to Purchasers, that valuable and highly desirable FREEHOLD ESTATE, situate in the parishes of Leyton and Walthamstow, about five miles from London, and only three minutes' walk from the Leyton Station of the Eastern Counties Railway, at the junction of the roads from the Leyton to Snaresbrook, and from Leyton to Walthamstow, at Leyton Corner, and comprising a substantial brick and stone mansion, known as the Poplars, approached from the road by a carriage-sweep, screened by a wall and iron railing, standing in grounds and lawn, library, morning room, 24 feet by 15 feet 6 inches, and a handsome drawing room, 24 feet by 15 feet 6 inches, opening to a verandah, with a detached range of kitchen, stables, &c., with farm-yard, walled kitchen-garden, conservatories, vinery, peach houses, forcing pits, and other requisites for a gentleman's residence, together with the valuable and productive pasture-land, lying within a ring fence, and belted by plantations, comprising about Seventy Acres of Meadow and Arable Land, abutting on the Lea Navigation, containing about 14 acres. Also a capital brick-built Residence, situate at the corner of Forest-road and Markhouse-road, with excellent flower conservatory, pleasure grounds, and kitchen garden, containing nearly 3 acres, in the occupation of Edward Colls, Esq., at £70 per annum. Also a desirable eligible Villa Residence, with plots varying from one to five acres each. The situation of the property, its proximity to London and a railway, and possessing frontages of nearly 1,000 feet to the main road, renders it a particularly eligible for the erection of villa residences, and a building speculation. The land and premises may be viewed by application to the tenants and keepers, may be had at Messrs. Farebrother, Clark, and Lye, Lancaster-place, Strand. Particulars also of Messrs. Bendbrett, Randall, and Simmons, Solicitors, 16, King's Bench Walk, Temple; on the Estate of the Gardener, who will show the property; and at Garraway's.

WALTHAMSTOW, Essex. Valuable Freehold Estates, comprising two Meadows, Rectangle, and 15 acres Principal Meadow, land eligible for building purposes, and producing £62 per annum, and 3 cottages

MESSRS. FAREBROTHER, CLARK, and LYE are instructed by the Trustees to SELL, at GARRAWAY'S, on WEDNESDAY, MAY 3, in Lots, unless previously disposed of by private contract, very valuable FREEHOLD ESTATES, comprising two Meadows, with capital Residence, and 15 acres Principal Meadow, let to Mr. Morris for a long year, at the nominal rent of £60; a detached residence, with stable, garden, and 10 acres of meadow land, let to Mr. Bryant, at £61 per annum; a residence, with 3 acres invested, stabling, and 4 acres of meadow land, let to Mr. J. H. Fox, at £22 per annum; several enclosures of accommodation land, one containing 3 acres, with extensive frontages, also likely for building purposes, and an enclosure of meadow land, containing 2a. 2r. 27p. let to Mr. Dobree, at £5 10s. the whole affording a most eligible opportunity for a building speculation on an extensive scale.—Particulars and plans preparing, and will very shortly be had at the Inns at Walthamstow, Leyton, and Stratford; of Messrs. Martin, Robinson, and Jackson, Solicitors, Bank-buildings; and Garraway's; and of Messrs. Farebrother, Clark, and Lye, Lancaster-place, Strand.

ADVERTISEMENTS.

ROYAL INSTITUTE of BRITISH ARCHITECTS, 16, Grosvenor-street.—At a SPECIAL GENERAL MEETING, held on Tuesday, April 25, 1854,

T. H. WYATT, Esq. V.P. in the chair,

the following resolutions were unanimously agreed to:—

Moved by W. Tite, esq. F.R.S. seconded by Professor Donaldson, "That it is the opinion of this meeting that the open space which is recently been made at the south-eastern angle of St. Paul's Churchyard should in future remain uncovered by buildings, inasmuch as it presents a highly interesting view of the Metropolitan Cathedral of St. Paul, and forms a striking approach thereto from the new main improvement, New Cannon-street."

Moved by P. Hardwick, esq. R.A. seconded by S. Ancell, esq.;

"That it appears to this meeting that the space referred to, if not built upon, would afford a most appropriate site for a statue of a prominent English architect, as Inigo Jones, in virtue of its immediate contiguity to an edifice which must be considered one of the noblest triumphs of science and art, alike honourable to him and to profession as well as one of the principal ornaments of this great metropolis."

Moved by J. Bellamy, esq. seconded by F. C. Penrose, esq.;

"That a Committee be appointed, consisting of the Vice-Presidents and the Honorary Secretaries, with the movers and seconders of the foregoing resolutions, with power to add to their numbers, to take such steps as may seem to them expedient for carrying into effect the above resolutions; and that they wait, in the first instance, upon the Improvement Committee of the City of London to request the favour of their sanction and assistance towards obtaining the object of this meeting."

Moved by B. Ferrey, esq. seconded by G. G. Scott, esq.;

"That the foregoing resolutions be inserted in the usual morning papers."

Thanks were voted to the Vice-President for his able conduct in the chair.

J. J. SCOLES, } Hon. Secs.
C. C. NELSON, }

TO the Worshipful the JUSTICES of the PEACE for the County of Middlesex.

St. Louis and Gentlemen,—The District Surveyorship for the Saffron-hill Liberty, Hatton-garden and Ely Rents, the parts of St. Chement Danes and St. Mary le-Strand, within the Parish of Lambeth, and the Savoy Precinct, and St. Sepulchre Without, having been declared vacant, I beg to offer myself as a candidate for the appointment, and respectfully to solicit the favour of your votes and interest. The testimonials and certificates which I hope I have the honour of laying before you, will, I feel assured, be considered ample grounds for my present application, and should you be pleased to elect me to the office, I shall hope to merit the continuance of your partiality by an efficient discharge of the duties devolving on me.—I have the honour to be, my Lords and Gentlemen, your very obedient servant,

Old Broad-street, May 4, 1854. WILLIAM SABINE, Jun.

COMPETITIONS.

TO ARCHITECTS SURVEYORS, AND OTHERS.

PLANS, DESIGNS, and DRAWINGS are required for building TWO CEMETERY CHAPELS adjoining each other and LODGE, for the Holbeach Burial-ground. The expense of the chapels is not to exceed £1,000 and the lodge £300. Plans to comprise elevations and ground plans, a section of the chapels in such a manner as the architect shall also contract for the works); 3d. for the second best, and 2l for the third best. The plans to be sent to the Clerk, sealed and indorsed, on or before the 31st of MAY next.

By order of the Burial Board,
EDWARD GEORGE AYLIFF, Clerk.

Holbeach, May 3, 1854.

WANTED, PLANS and CONTRACT to BUILD SCHOOL with HOUSE, &c. for a small country parish, four miles below Gravesend (on Essex side); the school not open roof, &c.) for about fifty children; the house to contain not less than two bed rooms, with washhouse; all drains, with sump, well and everything to be included. The sum for which the above would be let is stated to Rev. W. G. GOUGH-HILL, Vicarage, East Tilbury, by Romford. The plans must be according to the size, a plan of which will be forwarded to the person whose amount of tender appears most suitable.

CONTRACTS.

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer of the Woolwich District hereby gives notice, that the Honourable Board of Ordnance are about to enter into a SPECIAL CONTRACT for BUILDING a RIVER WALL on the Essex side of the Thames; and that such persons as may wish to Tender for the same may inspect the plan, and obtain a copy of the specification and form of Tender for the work, on application to Mr. PART-RIDGE, Clerk of Works, at the Royal Engineer-office, Royal Arsenal, Woolwich, on or before the 18th of MAY, 1854, between the hours of TEN and FOUR. Tenders upon the printed form prepared, to be delivered at the Office of Ordnance, Pall-mall, London, on the 11th of MAY, 1854, addressed to the Secretary to the Honourable Board of Ordnance and marked "Tender for Works at Woolwich." The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Woolwich, April 24, 1854.

ORDNANCE CONTRACTS.—TENDERS required for REPAVING with GRANITE a portion of the OFFICERS' and TROOP STABLES at LEEDS CAVALRY BARRACKS.—Notice is hereby given, that the Honourable the Board of Ordnance will receive TENDERS on or before THURSDAY, the 25th of MAY, 1854, from any persons desiring to be willing to perform the above mentioned work. Specifications for this work are to be seen, and forms of Tender obtained, with every other information, on application at the Royal Engineer's Office, 16, Parliament-street, York; or at the Barracks, Leeds, any day (Sundays excepted), between TEN and FOUR o'clock, until WEDNESDAY, the 24th of MAY, 1854.

Royal Engineer's Office, 16, Parliament street,
York, 2nd May, 1854.

CONTRACT No. 6.—The SELBY LOCAL BOARD of HEALTH are prepared to receive TENDERS from competent persons for the Manufacture, Erection, and Completion of a CAST-IRON TANK, GIRDERS, &c. to be used for the purpose of the Selby Water Works. Duplicate copies of the drawings and specification may be seen, and forms of Tender (with quantities) may be obtained at my office and at the Offices of the Engineers, Messrs. LEE and STEVENSON, 7, Duke-street, Westminster, on and after MONDAY, the 8th inst. and Tenders must be sent in to me on or before THURSDAY, the 18th inst.

By order of the Board,
(Signed) GEORGE LOWTHER, Clerk.

Selby, 3rd May, 1854.

TO BUILDERS AND CONTRACTORS.

THE COMMITTEE for BUILDING an ADDITIONAL SCHOOL-ROOM in connection with St. Paul's Church, Rusthall, near Tunbridge Wells, are desirous of receiving TENDERS for the ERECTION of the WORKS agreeably to plans and specification, which may be seen at the house of Mr. JAMES ROBERTS, Sandrock-lane, near Tunbridge Wells, on any day from FRIDAY the 5th of MAY, to FRIDAY, the 26th of MAY, inclusive; and also on application to Mr. GEORGE TEED and FOUR o'clock.—Tenders to be sent in addressed to the Chairman of the Committee, at the house of JOHN ROBERTSON, Esq. Tunbridge Wells, on or before FRIDAY, the 26th day of MAY. The tenders must include quantity drawing; and contract is not for the building from the Harvard Quarries, but for free-stone Quarry Lower Grinsted, adjoining the premises of the works, and to be completed on or before SATURDAY the 5th of AUGUST. The contract can be regarded as certain to all leading from the Quarry to Lower Grinsted, adjoining the premises of the works, and to leave it in good and sufficient repair at the completion of them. The Committee do not engage to accept the lowest or any other Tender.—Tunbridge Wells, May, 1854.

CONTRACTS.

ST. MARYLEBONE, April, 1854.—To BARGEMASTERS, LIGHTERMEN, FARMERS, GARDENERS, &c. Notice is hereby given, that the Vestrymen of the parish of St. Marylebone, in the county of Middlesex, will meet in the Board-room of the Court-house of the said parish, on SATURDAY, the 13th day of MAY now next ensuing, at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to CONTRACT for the BARGING AWAY or REMOVAL from the parish stone-yard of the DUNG, DIRT, MANURE, SLOP, and SWEEPINGS of the STREETS of the said parish. The said parish stone-yard is situate in Richmond-street, Lisson-grove, with a wharf and lay-by on the Regent's-canal. The Tender to be for six or nine or twelve months, as the Vestry may determine, from the 22nd of MAY, 1854. Further particulars may be known, and forms of Tender procured, from the Vestry's Surveyor, Mr. ROBERT WALLACE, at his daily attendance at the Court-house, from TWELVE to ONE o'clock. The Vestry will expect the parties tendering, or some persons on their behalf, to be in attendance at TWELVE o'clock, the time of opening the Tenders. The Vestry do not pledge themselves to accept the lowest or any of the Tenders.—By order,

W. E. GREENWELL, Vestry Clerk.

TO BUILDERS, IRONFOUNDERS, AND ROAD CONTRACTORS.

ST. MARYLEBONE EXTRAMURAL CEMETERY.—The Burial Board for the Parish of St. Marylebone, in the county of Middlesex, will meet on TUESDAY, the 16th day of MAY next, at ELEVEN o'clock in the forenoon, to receive TENDERS for the ERECTION of TWO CHAPELS, lodges, boundary-wall, entrance gates, iron railing, &c. for forming roads footpaths, draining and planting 25 acres of ground, called the Newmarket Farm, East-end, Finchley. Further particulars may be known on application at the Offices of the Architects, Messrs. BARNETT and BIRCH, 3, Verulam-buildings, Gray's-inn; where plans, &c. can be obtained on and after MONDAY, the 8th day of MAY. The Tenders to be delivered at the Court-house, Marylebone-lane, before ELEVEN o'clock in the forenoon on the said 16th day of MAY, and the part es tendering, or a responsible person on their behalf, to be in attendance at the time of opening the Tenders. The Burial Board do not bind themselves to accept the lowest or any Tender.—By order,

W. E. GREENWELL, Clerk.

By order of the Board, GEORGE DOWTHER, Clerk.
Selby, April 9, 1854.

METROPOLITAN COMMISSION OF SEWERS to BUILDERS and OTHERS The Metropolitan Commissioners of Sewers hereby give Notice that they will be prepared to receive TENDERS for the following Sewers, on TUESDAY, the 2nd day of MAY, 1854 at HALF PAST TEN o'clock in the forenoon, for the several Works hereinafter specified, viz.—

No. 1.—For COMPLETELY FINISHING 12,350 feet or thereabouts of BRICK and PIPE SEWERS, with other works in connection therewith, in the Streets and Roads hereinafter described, viz. Lower-street, Newington, Newington-causeway, Great Suffolk-street, Union-street, Borough-road, Marlborough-street, Blackman-street, Trinity-street, Trinity-square, and Mary Le-bone-lane, in the Parishes of Saint Mary, Newington, and Saint Mary Le-bone, in the County of Surrey; and for calendar months. Plans, sections, and specifications of the above works, together with the form of Tender may be inspected, and of particulars obtained at the Principal Office of the said Commissioners, No 1, Greek-street, Soho-square, between the hours of TEN and FOUR on and after the 1st MAY next. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party who is to undertake the above-named works No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square,
Dated the 8th day of April, 1854.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—TO BUILDERS, CONTRACTORS, and OTHERS The Metropolitan Commissioners of Sewers hereby give Notice that they will meet at the Court House No 1, Greek-street, Soho-square, on TUESDAY, the 9th day of MAY now next, at ELEVEN o'clock, as precisely, to open TENDERS for the supply of MATERIALS, and the execution of the DAY JOBBING and MEASURED WORKS of the said Commission, within the Works of the undermentioned districts and divisions, viz:—

1. Eastern and Western Divisions of the Westminster Sewers and the Holborn Division, in One Tender
2. Greenwich, Ravensbourne, Surrey and Kent, and Wandle Districts, and the Districts West of the Wandle, in One Tender

The Tenders are to be upon the basis of schedules of prices, and the contracts are to be for one year from the date of the contracts and bids, subject to determination in the manner stated in the conditions. Parties wishing to submit Tenders may, on payment of 10s 6d, obtain printed forms, with general conditions, particulars, schedules plans, and drawings, on application at No. 1, Greek-street, Soho-square, between the hours of NINE a m and FOUR p m. Each Tender is to include neither more nor less than the number of districts or divisions classified as above, and is to be endorsed Tender for Works in the ——" (the names of the districts or divisions must be inserted in the Tender to apply being inserted). No Tender will be received after ELEVEN o'clock a m precisely, on the said 8th day of MAY; and any Tender which is not upon the printed forms and schedules of the Commissioners, and duly signed by the party or parties tendering, will be rejected. The parties whose Tender shall be accepted shall be required to enter into bonds with two responsible sureties, to be bound jointly and severally in the sum of £500, for the due performance of their contract respectively The Commissioners do not bind themselves to accept the lowest or any Tender.

By the Court,
E. H. WOOLRYCH, Secretary.

1, Greek-street, Soho square, 28th April, 1854.

TO LITHOGRAPHERS, ENGRAVERS, AND OTHERS.

THE BILSTON TOWN COMMISSIONERS are desirous of receiving TENDERS for a LITHOGRAPH of the TOWN SURVEY, the particulars of which may be had on application to Mr HENRY MARTEN, Market-street, Wolverhampton Tenders to be sent in on or before SATURDAY the 13th day of MAY, 1854 By order,
HENRY MARTEN, Engineer to the Commissioners.

MEDLAND, Clarence-street, Gloucester, on and after the 8th of MAY. Sealed Tenders to be sent in on or before TUESDAY, MAY 16th, endorsed "Tender for Canal Offices," and addressed to Mr. MEDLAND, Architect, Gloucester.

TO BUILDERS.

THE DIRECTORS of the SURREY CONSUMERS GAS-LIGHT and COKE ASSOCIATION will meet at their Offices, 21, Bridge-street, Borough, on TUESDAY, the 16th MAY instant, at TWO o'clock in the afternoon precisely, to receive TENDERS for building a GAS-HOLDER TANK, 70 feet in diameter, 25 feet deep, internal dimensions. The specification and drawing may be seen at the Works of the Company, Rotherhithe, any day between the hours of TEN and FOUR. The Directors will not be bound to accept the lowest Tender. THOS. FAIN, Clerk to the Local Board.

Banbury, May 2, 1854.

BANBURY LOCAL BOARD of HEALTH.—CAST-IRON PIPES.—The Banbury Local Board of Health hereby give Notice, that they are prepared to receive TENDERS from parties who may be willing to undertake to SUPPLY THREE LAYERS of CAST-IRON PIPES, 48 feet in length, and 18 inches in diameter Copies of the specification, and any information required, may be had on application to Mr. H. C. HAYDEN, the Surveyor to the Local Board, Banbury The charge for each specification will be 2s 6d. Sealed Tenders, to be delivered at the Office of the Clerk to the Local Board, Banbury, before TWELVE o'clock on SATURDAY, the 13th of MAY, endorsed "Tender for Contract for Cast iron Pipes" The Board do not bind themselves to accept the lowest or any Tender

THOS. FAIN, Clerk to the Local Board.

Banbury, May 2, 1854.

LOUTH BURIAL BOARD.—To Builders and Contractors —Persons desirous of CONTRACTING for the BUILDING of a CHAPEL and LODGE, in the Cemetery at Louth, in the new burial ground, and for the LAYING OUT of the WALKS thereon, may inspect the plans and specification for the same at the Office of the Board, BELLAMY and HARDY, Louth, from MONDAY, the 8th instant, to the 3rd JUNE next. Further information may be obtained on application to the architects, Messrs. BELLAMY and HARDY, Lincoln, or at Louth. Tenders sealed and endorsed "Burial Board Tender," are to be sent to me on or before MONDAY, the 5th day of JUNE next, after which day applications will be made to give such security for the due performance of the works. The Board do not bind themselves to accept the lowest or any Tender.

By order of the Board,
CHRISTOPHER INGOLDBY, Jun., Clerk.

New-street, Louth, 3rd May, 1854.

CONTRACTS.

THE UXBRIDGE DISTRICT LOCAL BOARD of HEALTH hereby give Notice, that they are prepared to receive TENDERS from persons willing to CONTRACT for any of the following WORKS for the WATER-SUPPLY and SEWERAGE of their district, viz.:—

CONTRACT No. 1.—For CAST-IRON WATER-PIPES and CASTINGS.

CONTRACT No. 2.—For SLUICE-VALVES, FIRE-COCKS, &c.

CONTRACT No. 3.—For TWO HIGH PRESSURE, EXPANSION STEAM-ENGINES, BOILERS, &c. &c.

CONTRACT No. 4.—For BUILDING an ENGINE and BOILER HOUSE, Shaft, Reservoir, &c.

CONTRACT No. 5.—For MAKING and COMPLETING a COMPENSATING RESERVOIR, &c.

CONTRACT No. 6.—For MAKING and SINKING a WELL and BORE-HOLE.

CONTRACT No. 7.—For the Supply of STONEWARE GLAZED SEWER and DRAIN PIPES &c.

CONTRACT No. 8.—For CONSTRUCTING certain BRICK SEWERS, about 1,900 yards in length.

CONTRACT No. 9. For LAYING SEWER and DRAIN-PIPES, &c. &c.

The specifications and conditions of contract of any of the above may be obtained upon payment of 5s. and drawings and plans inspected by application at the Offices of JAMES PILBROW, Esq. Tottenham, Middlesex, Engineer to the said Board. Sealed Tenders properly endorsed, and addressed to "The Uxbridge District Local Board of Health," must be sent in on or before THURSDAY MORNING, the 11th day of MAY next.

By order of the Board,
CHARLES WOODBRIDGE, Clerk.

Uxbridge, 8th April, 1854.

REIGATE UNION.—To BUILDERS.—Notice is hereby given, that TENDERS are required by the Board of Guardians of this Union for the ERECTION of a new HOSPITAL, to be built at their Workhouse, situate at Redhill, Reigate, Surrey. The plans and specifications may be seen at the Board-room of the above Workhouse on any day (except Sunday) between the hours of TEN and FOUR, and any further information may be obtained of Mr. MUGGERIDGE, the Architect, Dorking. The Guardians will not pledge themselves to accept the lowest or any Tender. The Contractor will be required to provide a bond executed by himself and two sureties for the due performance of the contract. Tenders to be sent in, postage free, on or before the 16th instant, directed to me at Reigate.

By order of the Board,
G. CARTER MORRISON, Clerk.
Board-room, 3rd May, 1854.

TO BUILDERS.

THE DIRECTORS of the ILKLEY WELLS HYDROPATHIC COMPANY are desirous of receiving TENDERS for the ERECTION of their NEW BUILDING at ILKLEY, consisting of Masons', Plasterers', Carpenters' and Joiners', Plumbers' and Glaziers', Slaters', Painters', and Ironfounders' Works. The quantities have been taken out by Mr. D. CAMPBELL, Surveyor, of London. Copies of the same can be obtained on and after the 15th instant, by parties intending to submit Tenders. The drawings and specification can be seen at the Architect's Office, New Town Hall, Leeds, on and after the 15th instant, from NINE to SIX o'clock, until established, on or before which day Tenders, sealed, endorsed and addressed to the Directors, are to be delivered to the Architect. The person whose Tender is accepted will be required to enter into a bond with two responsible persons for the due performance of the contract, and to furnish a schedule of prices. The Directors do not bind themselves to accept the lowest or any of the Tenders.

CUTHBERT BRODRICK, Architect.

Leeds, May 1, 1854.

TO BUILDERS.

PERSONS desirous to CONTRACT for the proposed ADDITIONS and REPEWING of SOUTH STONEHAM CHURCH, near Southampton, may see the plans and specification at the Office of Mr G. GUILLAUME, Architect, St. Mark-road place, Southampton. The Tenders to be sent in, addressed to the Rev. W. D. HARRISON, South Stoneham Vicarage, on or before WEDNESDAY, the 10th inst. The Committee do not pledge themselves to accept the lowest or any Tender (Bills of quantities supplied, 10s. 6d. each).

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a detached VILLA at Redhill, near Reigate, may inspect the drawings and specification at the Offices of the Architect on and after MONDAY, MAY 8. The lowest Tender will not necessarily be accepted.—WILLIAM YOUNG, Architect, 5, Chancery-lane.

By Her Majesty's Royal Letters Patent.

VENEERS CUT (by Knife only) by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is guaranteed upon the ordinary method of cutting veneers.—For particulars of prices, and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer-cutting Works, 44, Robert-street, Chelsea, adjoining the King's-road Saw-mills.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash:

¼-inch Yellow, 17s. per square. ¼-inch White, 16s. per square.
⅜-inch " 18s. " ⅜-inch " 17s. "
1-inch " 23s. " 1-inch " 21s. "

Dantzic Timber, 30s. per load.
Mouldings by machinery in very great variety.
ARCHBUTT and DARKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg respectfully to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

ACORN TIMBER WHARF, Canal Bridge, Old Kent-road.—RICHARD MAY informs the building public that his business in future will be carried on at Acorn Wharf. They are invited to inspect the stock of timber, deals, and all kinds of wood goods which are now ready for delivery:

Norway and Swede Timber, from 75s. per load.
Dantzic and Riga Timber, from 80s. per load.
Gefle Deals, Yellow, 4s. 6d.; White, 4s. 3d. per 12 feet.
Christiana Deals, Yellow, 6s.; White, 4s. 8d. per 12 feet.
Christiana Battens Yellow 2s. 1od.; White, 2s. 6d. per 12 feet.
Petersburg and Fine Planks, from 5s. 10d. per 12 feet.
Prepared Floor Boards, 1 in. Yellow, 17s.; White, 15s. 9d. per square.
" " 1¼ " 18s.; " 17s. 6d. "
" " 1 " 22s. 6d.; " 21s. 6d. "
" " 1¼ " 26s. 6d.; " 24s. 6d. "

All other kinds of wood goods at equally reasonable prices, for Cash.—N.B. The extensive saw-mills now erecting on the wharf, are expected to be ready for work by the 1st of May.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

METROPOLITAN PATENT WOOD PAVING.—WILLIAM BASTABLE and CO beg to state that they have laid square yards of second-hand WOOD PAVING to DISPOSE OF which is admirably adapted for paving sheds, workshops, wharfs, yards, gateways, forges, breweries, stables, and skittle-grounds.

Office, Belgrave Works, Thames-bank.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 8s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, and 56, James-street, Oxford-street; also Manufacturer of Improved Kloteing and Decorative Varnishes.

HART AND SON,
WHOLESALE IRONMONGERS, MANUFACTURERS, &c.
53, 54, & 55, WYCH-STREET, STRAND.

PITT'S PATENT SELF-ADJUSTING DOOR FURNITURE IN WOOD, CHINA, GLASS, &c.

AIR BRICKS, LOCKS, HINGES, &c.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL-HANGERS, AND THE TRADE IN GENERAL.

WHOLESALE IRONMONGERY WAREHOUSE, 18, Blandford-street, Manchester-square (running out of Baker-street, Portman square), where a large stock is always kept on hand for the exclusive supply of the above trade.

JOHN YOUNG, Birmingham and Wolverhampton, Agent and Factor.

TO IRONMONGERS.—A Stock of improved OG GUTTERS, which require no clips, with line-head and plain sockets, 3½, 4, 4½, and 5 inches wide, at WALMSLEY and CO'S, Iron Merchants, Paul's wharf, Upper Thames-street.

N.B. Rain and Hot-water Pipes Sash Weights Stoves, Hanges, and all Builders' Castings, at lowest wholesale prices. Lists per post.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm enclosures, or sub-divisions, for temporary agricultural enclosures (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. (after the model of the fences of this material in the Slopes and Home-park, at Windsor), has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given as to much per running yard, for fencing fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.
163, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.
Register Stoves, 5d. 6d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 3l. 18s.; 3 ft. 6 in., 3l. 5s.; 4 ft., 3l. 18s.
3-feet Cottage Ranges, with ovens and back boilers, 35s. each.
3-feet self-acting ditto, ditto, 40s. each.
Air Bricks, 4s. per doz.
Best Town Glue, 56s. Ditto, Scotch, 68s. per cwt.
Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico. All works of art in the various metals executed at the above foundry.

TO GAS AND WATER COMPANIES, CONTRACTORS, AND SHIPPERS.

CAST-IRON SOCKET-PIPES and Patent TUBING, with Connections of all sorts;
RETORTS OF IRON AND CLAY, FIRE BRICKS AND FIRE CLAY.

All kept in stock, and sold at wholesale prices.

Tanks, Purifiers, &c. fitted up complete, in London, the country, or any part abroad.

JOHN BURNETT AND CO. 66, BANKSIDE, SOUTHWARK.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M C and Co's Registered Main Water Closet." This water closet is the most simple, cleanly, and effective that has hitherto been produced, and for having with out the usual service box, cistern works, &c. From its construction, it is impossible for Mineral Leakage to prevent it. A variety of the Closet may be had on application, or the closet inspected, at the Manufactory, as above.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS

These Fittings have all the newest improvements, and are the only Patented invention of this description. Improved Stable Fittings, with manger, rack and water trough all of cast Iron Pattern Manger and Water-trough combined; also Corner and Straight Mangers. Plain, Burnished, and Galvanized Stable Furniture of every description. Iron Gates, Railings, Hurdles, Sheep and Game Wire Netting, &c.—JAMES BARTON, Ironmonger, &c Manufactory and Warehouse, 30, Oxford-street, a few doors East of the Pantheon.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements Registered and Patented. Every article is made Fire-proof.—Address COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

MR. LEE STEVENS'S PATENT OVENS. Bakers and confectioners are invited to witness the operation of the smoke-preventing and fuel-saving furnaces now in use for baking purposes, at Mr. Baker of Mr. EDWARD BUCKNELL, 135, Houndsditch who will kindly allow such inspection by the trade daily from Nine to Four, from the 10th to the 22nd May. This invention is extensively applied by Mr. T. and C. CARRY, 64, Pan-street, Euston; and Mr. JOHN EMCE, 21, John-street, Chancery-road, St. George's in the East, Oven Builders, who guarantee success. Orders are registered by Mr. JOHN LEE STEVENS, the Patentee, at the Offices, 1, Fish-street-hill, City, London, where references may be obtained to firms using his system of smoke-prevention; adapted to furnaces of all sizes and forms, in town and country.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c

F. P. MCCARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades that he is now SELLING wholesale all requisite FITTINGS for GASWORK—pendants, brackets, chandeliers, &c.; compo, tin, and iron gas piping, and fittings in general; sheet zinc galvanized iron tin plates, iron wire, &c.; best glues, 5s. per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp—Observe, 7, Beech-street, Barbican.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Gudgeons, and

STEWART'S PATENT CAST IRON GAS and WATER PIPES.

Offices, No. 7, Sise-lane, London.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at LEPEILEY and STEPHALL'S,

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

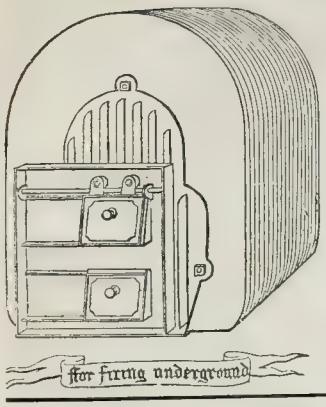
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSAM and CO invite the attention of all concerned in sawing planks, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and excessive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

FIRE—ROBBERY—VIOLENCE—PILLAGE—MILNER'S HOLDFAST and FIRE-RESISTING SAFES, the best safeguards in the world against

EXTENSIVE FIRE IN GLASGOW.

MESSRS DAVID DODDS AND CO.



Gentlemen,—At the serious fire at 101 Union-street yesterday, by which my counting-house was destroyed, I owed the preservation of my books to the MILNER'S SAFE in which they were kept. The contents of a wall safe were totally destroyed at the same time. You will please send me immediately another "Milner" of the same size as the one I had, being thoroughly satisfied of their safety, after the test I have just seen.

I am, Gentlemen, your obedient servant,
(Signed) JOHN DODDS.

27, Union-street, Glasgow, Feb. 22, 1854.

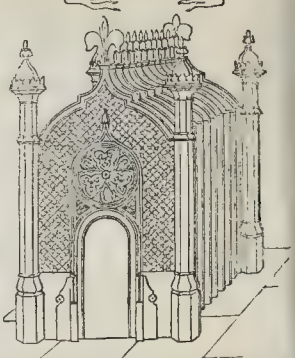
MILNER'S PHŒNIX SAFE WORKS, Liverpool; London Depôt, 47a, Moorgate-street, City.

Gill Stove.

for firing underground

STUART AND SMITH'S
PATENT GILL STOVE,
FOR
HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,
ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

Gill Stove.

for firing on floor of building

PORTABLE HOUSES—ADAPTED TO ALL CLIMATES.

SOLE MANUFACTORY, CLIFT-HOUSE, BRISTOL.

SAMUEL HEMMING'S PATENT IMPROVED PORTABLE BUILDINGS.

A great variety may be seen at the Works, consisting of Churches, Chapels, Two-storied Hotels, handsome Row of Two-storied Shops and Dwellings, with Balconies and Verandahs; and many Ornamental Villas. Also, an Emigrant's Home, fitted up complete, with accommodation for Seventy-two Persons; and many other Buildings, covering an area of Ten Acres of Ground.

Every Building may be seen perfectly erected previously to its being taken down for shipment. All the Timber-work is dried in extensive Drying-sheds.

TO CONTRACTORS, IRONFOUNDERS, and OTHERS.—The Advertisers are willing to purchase a quantity of CAST-IRON SCRAPS. Pieces of castings, too large for melting in the cupola, would not be rejected, but would be bought at their highest value.—Apply, either personally or by letter, to Mr SMITH, 463, Oxford-street, London.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 20,000 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green-houses. The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country. Apply, per post, to T. BOILEVE, French Engineer, 85, King William-street, City.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER TYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

HOT WATER APPARATUS, adapted for Horticultural and every other description of buildings; improved Boilers, requiring no brickwork; Warm Air Apparatus, &c.—Apply to SPILLER and TAYLER, Engineers, Battersea.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge's, delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings. Messrs JOHN WEEKS and CO will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, just completed for two kitchens in the above building. A great variety in stock upon the same principle. Gas Baths from 7s. by which a warm bath may be obtained for three-halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated Dry Gas-Meters.—50,000 in use. Testimonials at the Office, 145, Regent-street. Manufactories removed from Hampstead-road and St. Martin's-lane to more extensive premises, New-road, near Albany-street.

NAILS and IRONMONGERY, from BIRMINGHAM direct. Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES. a complete LIST of which will be forwarded upon application. FREDERICK BLYTH, Nail Manufacturer and General Factor, Regent-parade, BIRMINGHAM; or at 16, Gresham-street, LONDON.

THOS. B. LAWRENCE and CO. Zinc Dealers and Manufacturers, 10, York-place, Lambeth, having removed to their new premises, are selling SHEET ZINC at 33s. per cwt.; Perforated Zinc, at 4d. per foot; Rain-pipes, 3 in. 4d. per foot; Gutters, 4 in. 4d. per foot, and in proportion. Chimney-shafts, Cowls, &c equally cheap. Plumbers' Zinc, 42s. Zinc Paint and Galvanized Iron Plates. A prize medal was awarded them at the Great Exhibition.

Agent and Maker of HIORT'S PATENT SMOKE VENTS.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET-MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads, 1s. 6d.

Best fine Cut Clasp and Rose { 18s. 6d. 18s. 6d. 17s. 6d. 17s. 6d.
1½ 1¼ 1 ¾ 2¼ and 3 inch.

Sash Weights. Air Bricks, 3s. per doz. Hooping for bond, 12s. per cwt. Cast Lath, 11s. 6d. per cwt. Sash Pullies, 5s. 6d. per gross.
Arnott's Ventilators, 4s. each. Elliptic Stoves, with double backs, 2½d. per inch.
Register Stoves from 5d. per inch.

Improved Self-acting Ranges with oven and boiler { 28 32 34 36 inch.
28s. 30s. 32s. 34s. each.

Best Self-acting Ranges, with oven and boiler, wrought bars and bright fittings { 36 38 40 inch.
56s. 58s. 60s. each.

An extensive stock of bright and black Register Stoves in every variety of design, at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger-plates, Levers, and Bell-pulls, en suite.

BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.

The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming ironmongery can here select whatever they require at WHOLESALE PRICES.

WALMSLEY'S new Show-rooms are now open with a Modern and Choice Stock of General Furnishing Ironmongery unequalled in variety, and all at unprecedented low prices.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

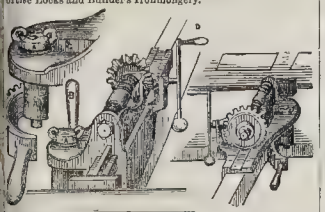
Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about 18 oz. per foot super.
No. 12 " " " 20 oz. do. do.
No. 13 " " " 23 oz. do. do.
No. 14 " " " 26 oz. do. do.

For further particulars apply to

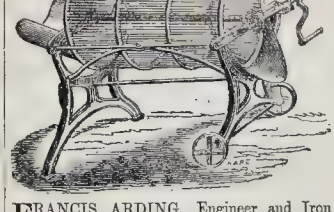


MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE,



WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builder's Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 3 to 4 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm; the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a newer cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to more quickly and safely used than any yet brought out, and at the same time it is light and portable.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and Co., 63 and 64, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, painted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, patent. Lambeth." Plain and ornamental cast and wrought iron-work, for fencing and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

FRANCIS ARDING, Engineer and Iron Founder, Albert Iron Works, Uxbridge, Middlesex, begs to draw the attention of Builders, Contractors, and others to the above useful Machine, manufactured by him, for sifting sand, gravel, lime, ashes, &c. by the use of which one man and a boy can do the same amount of work as six men using the common sieve.

Price, delivered in London,—

No. 1.—3 feet cylinder £6 6 0
No. 2.—2 feet 6 inches cylinder 7 7 0
No. 3.—4 feet cylinder 8 8 0

The Second Edition, with Additions and an Index, in 2 vols post 8vo. price 21s 6d.

AUTOBIOGRAPHY of B. R. HAYDON, Historical Painter. Edited, and continued to his Death, from his own Journals.

By TOM TAYLOR, M.A. of the Inner Temple, Esq.

"It is difficult to say in which sense the work before us possesses the greater interest, whether as a contribution to the critical history of art in England, during the first half of the century, or as an illustration of high moral truths, enforced by a terrible conclusion. In either point of view its value can hardly be overrated. The artist and the moral set may alike pore over its pages, and learn from it lessons at once of grand and profound. The end for has performed it in a firm, able and delicate task in a manner which does him the highest credit." *John Bull*

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent (including Tredgold's Diagrams, &c. Twelve parts at 3s. or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 36s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 32s boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE; containing a series of Designs for Decorative Apartments with the Colours suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts at 3s. or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmony in Colouring, the Manufacture of Pigments, with Various &c. By W. M. HUGHES, Esq. Accompanied by actual Specimens of Hand-brush Graining and Marbling. Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPEDIA, a new and enlarged edition, comprehending Practical Illustrations of the Theory and Progress employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer. The Progress of Mechanical Science has developed many of the important facts since the first publication in 1836, of the Encyclopedia. The Inventions and Discoveries recently made have engaged the assiduous attention of the Editor, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo. volumes, cloth, lettered, price 30s.

TO MERCHANTS AND OTHERS EXPORTING FURNITURE.

SMEE and SON'S Book of Designs of Cabinet Furniture, is now ready. It contains upwards of 600 engravings of articles, of which they have a stock at their Wholesale Warerooms, No. 6, Finsbury-pavement, London.

ELECTRIC-POWER LIGHT and COLOUR COMPANY. Offices, 31, Pall-mall.—A SPECIAL GENERAL MEETING of the shareholders of the Electric-power Light and Colour Company will be held at these Offices, at 11 o'clock, on WEDNESDAY, the 10th instant, when a PROPOSAL for INCREASING the CAPITAL of the COMPANY by 200,000l. to be made preparatory to the Deed of settlement of the Company will be submitted to such Special Meeting.—By order of the Board, J. W. WARRE TYNDALE, Secretary.

May 1, 1854.

ELECTRIC COLOURS.—The ELECTRIC POWER LIGHT and COLOUR COMPANY is prepared to supply the Electric Power and other Colours, which, for quality and lowness of price are unequalled.—Address, W. PRUSSE, Esq. Commercial Manager, Frogmore lane, Wandsworth, Surrey.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Manufactures of temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 19½, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

The Builder.

SATURDAY, MAY 6, 1854.

N May the fruit of the artistic tree is everywhere ripe, and waits but the gathering. To the artist it is a month of hopes and fears; to the lovers of art, a nth of pleasure and excitement. Fortunately latter were never so numerous amongst us they are now, and the result is, that, with the mer, hopes may safely predominate over fears. we remember that there are at the Royal ademy, 1,365 pictures; at the British Insti- ion, 572; the British Artists', 732; the rtland Gallery, 438; the Old Water Colour ciety, 356; and the New Society, 367,— the whole, 3,830 pictures; and add to these nery, panoramas, and some thousands of wings on wood for illustration (saying nothing the rejected works), it will be seen that produce of the tree is very considerable. t many years ago, say twenty, the sale of a ture even at the Royal Academy, was a iceable event (never recognised, by the way, the Academy, nor is it at this time, the sale pictures being out of their province), whereas w, many thousands of pounds are annually nt in the various exhibitions by the general blic, and the greater number of meritorious ks find purchasers.

The private view of the eighty-sixth Exhibi- n of the Royal Academy of Arts was given on day, the 28th ult.: the dinner took place as al on the following Saturday, and on Monday general public were admitted. At the dinner ie interesting speeches were made, but we briefly refer to them.

The president, Sir Charles Eastlake, in pro- ing the health of the visitors, said justly, the noble ardour which our merchants and nufacturers evinced in encouraging living native talent, was calculated to communi- an impulse to a still-widening circle, to iliarise the greatest number with its result, to interest more warmly the people at large. fact, art, with its material appliances and its anizing influences, was already evidently unmistakeably making its way to the ple.

The Lord Chancellor, who returned thanks the toast, said,—It used to be thought a of great knowledge and taste to depre- the moderns in comparison with the ancient sters; but this fashion was passing away. would not pretend to say that in the opinion artists the productions around them would l those of the Vatican, or those upon the s of the Pitti Palace; but let it be asked ther the contemporaries of Raffaelle, Titian, do, or any of the great masters could have duced the works they then saw? The ftings of the Vatican and the Pitti Palace the collected works of different ages, and like these, the production of a single year. king at the matter in this point of view, our sts need not shrink from a comparison with most palmy days of art. He believed there was not one country in Europe ch could produce better specimens in the ner walks of art, or whose historical artists d rival or compete with the works upon e walls. In looking round these rooms we ht enter into the feelings of the widow who parting from her son, a young emigrant; re might look upon the calm and dignified ures of the hero sleeping on the eve of his ttion. Turning to those domestic land- pes in which our artists excelled, we might reminded of the indolent way in which we letimes lounged away a day in a sea-coast town his country. Allow him to say, too, that legal brethren might acknowledge that there too much truth in the picture which repre- sented the interior of a jury-room, in which the jury were deliberating.

When the President returned thanks for him- self and the members, he said,—As great painters have arisen in former times, often at first exciting censure by their novel aspirations, but gradually compelling and admiring assent to their now-canonized productions, we have been taught that excellence as yet unknown may still remain to be developed; and it there- fore becomes the duty both of the teachers and promoters of art to lay no exaggerated stress upon received types, but, keeping the criterion of nature and the conditions of representation in view, to permit invention and practice to be as unfettered as possible. Within the limits which the essential elements of the fine arts sufficiently define is to be found a variety of forms of art, each having its peculiar excellence. Within these limits, and amid that variety, taste need not and cannot be stationary, but like a pendulum the oscillations of which are not nar- rowly circumscribed, may be suffered freely to vibrate. The general tendency of art now appears to be towards the real, the individual, and the definite; a tendency which, as regards its higher capabilities, if less fitted to kindle the imagination, may edify and instruct, and may touch the chords of the purest feeling; while, in its practical results, it is sure to enrich its domain with new wealth gathered from in- exhaustible nature.

The Chancellor of the Exchequer spoke; and Lord John Russell (who paid a high compliment to Mr. Grant, who had "honoured him" by painting his portrait); and then Mr. Disraeli was called up, and commented jocosely on the portrait in question; ending more seriously with an appeal to the Government to aid in advancing the fine arts. We ought to feel, said the speaker, that we aggravate the evils of war if, while it is our determination to make those efforts that are necessary to vindicate the honour and interests of this country, we do not also do all in our power, by our sacrifices and by our energy, to advance the cultivation of the human mind and the refinement of the human intellect. We ought not to tolerate the opinion that it is necessary to forego those opportunities which may present themselves of advancing the public taste, and we ought, on one day in the year at least, to look forward to the time when it shall be considered the duty of a statesman to serve his country and to advance the arts.

The Lord Mayor was invited to do what he could to maintain the open space on the south side of St. Paul's, with perhaps a statue of Wren in the centre; and promised to do his utmost to impress the corporation of London with the views expressed by the President. And then, when the Home Secretary was drunk—that is, his health—and he was thanked for the law relative to the consumption of smoke, as a boon to architecture and sculpture,—

Lord Palmerston said,—The consumption of smoke was no novelty—it had been going on for ages; but the consumption of smoke had been going on in our lungs instead of in our chimneys. It had long been a subject of great grief to those who visited London, to think that from that vast volume of carbon which was perpetually floating over our heads, all the finest works of ancient art, and the productions of modern genius, whether of our painters, our sculptors, or our architects, were doomed to receive rapid accumulations, hiding their merits and defacing their beauties; and he did hope that the Act passed last session would contribute to the pre- servation of works of art.

Enough, however, of the dinner and the diners, and now as to the exhibition.

The collection is unquestionably good; to our minds the most satisfactory that we have seen for some years: there are more pictures of strong expression and earnest thought than usual; comparatively few puerilities, and a very fair sprinkling of really excellent works in their various classes. Perfect works of the highest art do not grow thick as blackberries in any age or place. Life is short, art is long. How long, only those who have wearily threaded the path can say. Let us look round. No. 20 is "The Death of Francesco Foscari, Doge of Venice, five Days after his Deposition," by F. R. Pickersgill—the best picture the artist has ever painted. (34) "The Departure of Ulysses from Ithaca—Morning," by F. Danby, is more like sunset than sun-rise; it is nevertheless a work of great refinement and beauty. F. Goodall's "Swing" is brilliant and elegant; the land- scape, too, uncommonly well managed. Sir Edwin Landseer writes "unfinished" on (63) "Royal Sports on Hill and Loch," where we have the Queen, the Prince, and others amongst the slain deer, and so disarms criticism. It has, of course, some of the beauties of the master, but the colouring is disagreeable and the execu- tion must be called flimsy. No. 64 is a portrait of the Archbishop of Canterbury, by the veteran H. Pickersgill, R.A. who also exhibits five others in his best style. No. 69 is one of the best portraits in the Gallery—"The Right Hon. T. B. Macaulay, M.P." by F. Grant, R.A. The same artist has a life-like representation of Lord John Russell, No. 193, already referred to. No. 73, "The Silver Pool," is a charming specimen of Lee's art, preferable perhaps to the others exhibited by the same painter; if we except "The Chequered Shade," painted in conjunction with T. S. Cooper (362), the calm repose of which is most soothing. (84) "Baby's Turn," by C. W. Cope, R.A. is a fine piece of art,—art which we would have applied to a better subject. "The Friends," by the same painter (217), two children engaged on "Robin- son Crusoe," displays the same power of mani- pulation, and is a remarkable picture. In (85) "A Villager's Offering," by T. Webster, R.A. two children carrying a plate of mushrooms to a poor widow, the upturned face of the girl is exquisitely touching: the widow might be a little less prosaic. David Roberts's "View on the Canal of the Guidecca" (115), and his "Church of Santa Maria della Salute, Venice" (200), must not be overlooked. No. 129, the president's contribution, is distinguished by re- finement, but has little else to recommend it. 116 is "The Jury," by O'Neill, alluded to by the Lord Chancellor, a well designed and well painted picture. The widow and son mentioned by him had reference to Mr. Solomon's clever pair of pictures, "First-class—the Meeting" (314), and "Second-class—the Parting"; (361) and the lounging away a day in a sea-coast town of course referred to (157) "Life at the Sea- side," by W. P. Frith, R.A.

In this picture Mr. Frith has ingeniously introduced a large amount of character (with several pretty faces which his friends will recognise), parties to several incidents which serve to retain a crowd about it. His smaller works (270) "Anne Page," and (468) "The Love Token," a scene from the "Bride of Lam- mermuir," are very excellent. (163) "Portrait of Mrs. Thomas William Kennard" is a charming face, faithfully rendered. (187) "Hulks on the Medway," by C. Stanfield, R.A. is an exquisite picture, more to be desired even than the same artist's larger work, "The Pic du Midi d'Ossan" (315). Mr. Leslie's picture from the "Rape of the Lock" (192), though an important and admirable work, is cold and flat. Mr. Linnell has a noble landscape, "The Disobedient Pro- phet." No. 234, "The old, old Story," by F. Stone (258), will find many admirers. Mr. E. W. Cooke has left Venice and taken to the sea again, and we are glad of it. "Zuyder Zee Botter" (263) and "The French Lugger running into Calais" (394) are in his best style. The water in the latter is exquisitely painted. Ansdell has two works of large size and great excellence. Creswick's principal pic-

ture, "The Passing Cloud" (302), has too large a canvas, though the atmospheric effect is admirably given. He has some smaller works of agreeable character. "Chastity" (330) by Frost, is carefully studied, and the colouring is unexceptionable, but it does not touch either the heart or the mind. We prefer some of Mr. Sant's simple single figures to "The Children in the Wood" (344), notwithstanding its evident merit. 377, "The Awakening Conscience," by W. H. Hunt, is a repulsive picture remarkable for intensity of expression: as a piece of imitation, the work round the bottom of the girl's dress has seldom been surpassed.

"The Marriage of Richard de Clare, Earl of Pembroke" (379), by D. Maclise, R.A. is the most striking feature of the collection, and possesses so many high qualities that it is to be hoped the Government will purchase it. The subject is not a pleasing one,—the solemnization of a marriage on a field of battle amidst the wounded, the dying, and the bereaved; and the subject wants concentration; but for invention and fine drawing, it must be ranked amongst the greatest efforts of the British School of Art. No. 403, "The Last Sleep of Argyle before his Execution," by E. M. Ward, is another work of the highest class. It is intended for the Commons' corridor of the new Houses of Parliament. The head of the Earl is admirably delineated; but the renegade at the door wants substance and rotundity. Mr. Hannah has been less successful this year than previously: "The Countess of Nithsdale petitioning George I." (426) is a flurry from one corner to the other: there is not a quiet inch on which to rest. And yet, as a lady said, the Countess's moire antique *is* "very well done." In "Guiderius and Arviragus repeating the Dirge over Imogen," by W. Gale, there is serious honest work. The disciples of the school, amongst the productions of which this picture, and some others previously mentioned, must be classed, paint what they know rather than what could be seen from any given point. 508, "The Light of the World," by W. H. Hunt, an upright figure of our Saviour bearing an elaborately ornamented lantern, is distinguished by a sentiment of piety: the lantern, however, as it seems to us, is an entire mistake. 607, "A Thought of Bethlehem, a part of the life of Madame de Chantal," by C. Collins, is another of the same class, and notwithstanding the constrained and almost distorted attitude of the mother, and the common fault of absence of atmosphere, commands attention and praise. 520, "The Charity of Dorcas," by W. C. T. Dobson, is one of the most complete and thoroughly excellent pictures in the gallery. We are forced to omit mention of many works as much entitled to it as some of those already referred to. We will not, however, pass over 1360, "The Protest," by W. Cave Thomas, an elaborate work of great excellence, which is entombed in the octagon-room. If the centre group had been less forcible, the general effect would have been improved.

We will speak of the architectural works next week.

ON A COMMONPLACE HOUSE.*

Experience shows that where a room of moderate size has the breadth equal to two-thirds of the length, and the height half of the length, everybody will acknowledge it to be a well-proportioned room. We do not know why, but if we take a foot away from any of these dimensions, the room will not obtain so ready a commendation, though in point of convenience nothing may be lost. The finer and more cultivated the taste the more sensible will a person be of a small aberration from these proportions. I say a small aberration, because with a greater difference a new style of beauty may be introduced, and two persons of equally refined taste may differ as to which is the better. A square room would have its advocates, though this form is not much in request at present, and in that case the height should be at least equal to two-thirds of the width, or to more, perhaps even to the whole width if with a coved ceiling. Generally speaking, the eye more readily forgives an excess of height than the want of it. In small rooms a square form is preferable to an oblong, partly, I suppose, with reference to the human stature. A room 12 feet by 12 feet may do very well in a small house, one 14 feet 9 inches by 9 feet 10 inches occupying about the same area, and half as long again as broad, would be inconveniently narrow. To a Liliputian, I apprehend a room 6 feet by 4 feet, and 3 feet high, would seem exceedingly well proportioned.

A double cube is a beautiful form, and for a large hall, or in a public edifice, a length equal to three times the breadth, and a height equal to half the length, would be almost universally approved; but in small rooms these proportions would not be pleasing. A room 36 feet by 12 feet would not be admired, and in such a room the height of 18 feet would appear extravagant. In these feelings there is an evident reference to a being 5 or 6 feet high.

There are some intermediate forms which are good, though perhaps not equal to those of simpler proportions: a room, 24 feet by 18 feet, where the length is $1\frac{1}{3}$ of the breadth, would I believe be more generally pleasing than one 23 feet by 18 feet or 25 feet by 18 feet. If two such rooms were made objects of comparison, the majority of spectators would probably not appreciate the difference, but those who did would almost universally prefer the one of 24 feet long.

The room which forms the base of these observations is 17 feet wide, 25 feet 6 inches long, and 13 feet high. The height is always apt to look less than it is in proportion to the horizontal dimensions. We will now pass on to the details. First, what are the dimensions of the doorway? 2 feet would be enough to give entrance to a room; 1 foot 10 inches is the usual width of the door of a carriage; but 3 feet is not sufficient for a gentleman to lead a lady through with convenience,—and what is palpably inconvenient can hardly look beautiful. On the other hand, large doorways make a room look little, and, what is worse, destroy the appearance of privacy and comfort. Steering between these two difficulties, I should recommend a width of about 3 feet 3 inches for the doorway of such a room as we are now contemplating, with a height of about 7 feet. As a mere matter of taste, I should say that the height of the door ought to be half the height of the room, and the width rather less than half the height, but such a rule can only take place where the room is larger than that here proposed. The position of the door by which we enter the apartment is nearly determined by the general plan of the building. It must be nearly at the end of one of the longer sides, but far enough from the end of the room to leave space for a handsome piece of furniture. In large and palatial rooms the doorway if not in the middle of the side or end should be repeated, and we should have two doors placed in corresponding positions, but this is not practicable in such a house as we have for the subject of our present disquisition. We have admitted folding-doors into an adjoining apartment, but these without correspondence with anything else, either in size or position, are admitted only when space is wanted for a larger company than could be contained in the one room.

The mouldings round the door are usually estimated at one-sixth of the opening. I see no objection to this rule where the surrounding ornament takes the form of an architrave with advancing faces. When it is of a more solid character a less width is sufficient, but on the other hand when the character of the apartment is rich and ornamental, and still more if it aim at magnificence, a greater width is required. The more solid mouldings require a flat space between them and the door, which may either be with or without ornament, or an ornament may be carried down beyond the regular architrave. The collection of doorways published by Professor Donaldson may serve to show something of the great variety of which this part is susceptible.

Palladio was fond of crowning his architrave with a frieze and cornice, even in internal decorations, and these frequently extended beyond the architrave, and were supported on consoles and sometimes surmounted by a pediment. The cornice and pediment seem absurdities, as indicating a construction which cannot exist, and think they are now universally rejected; yet the straight line of the architrave is apt to appear rather bold and abrupt. A cyma of small projection, and an ornamented surface, may be introduced with advantage, or a row of detached ornaments, rising or not rising higher in the middle. The infinite variety admissible in such a subject, renders it a very suitable exercise for the taste and invention of a young architect. The folding doors are so out of all rule, that it may be doubted whether we should apply to them the same mouldings and ornaments which we place round the doors, but I am inclined to answer in the affirmative.

We now pass on to the windows. Our pupil has inserted three. Why? This is a subject which affects the outside appearance of the house, as well as the internal. In placing three windows on this floor, we rarely make them exactly over the openings below, because we are unwilling in our small houses to give up so much as 7 feet or 8 feet to the entrance passage. Three windows are, therefore, in this respect no better than two, for if a sensible want of regularity is admitted, it matters not whether it be much or little. The eye in each case is equally disappointed, and in each habit has reconciled us to the disappointment. The advantage of two windows over three, is that the space above is thus better divided into two bedrooms, not large indeed, but at the same time not inconveniently small. Perhaps as a mere matter of taste, three windows may be better than two. Yet with the chimney at the end of the room even this may be disputed. Four windows might be introduced, and in that case the positions of all the openings over one another be maintained through the whole front, without sacrificing too much to the passage. The window-tax has, we very lately, prevented this, and the eye is not accustomed to such frequent and narrow openings, yet I know no canon of taste which would render it inadmissible.

The distance between the windows may, according to Sir W. Chambers, be from once and a half to twice the width of the window. The rule is entirely arbitrary. The large houses in Belgium frequently have the space not greater than the opening, while in those at Rome it is sometimes three times as much, and in both cases with very good effect. With so dull a sky as that of England, and especially of London, the latter proportion would have a gloomy character. We are told to make the height of a window twice the width, or a little more. If it is not an entrance, there does not seem the reference to the human figure which exists in doorways; but a low window, not subdivided into parts, has a disagreeable effect, perhaps because it suggests the idea of a low room. With two windows, the space from centre to centre in the room before us would be 12 feet 9 inches, one-third of which, 4 feet 3 inches might be the size of the opening externally, leaving twice as much for the solid interval, and this, when the opening is large, is a proportion not at all unpleasant in our climate. Small openings thus arranged, for instance, 2 feet 6 inches wide, and 5 feet apart, would not look well. I can give no reason for this, but I think it does not depend merely on our not being used to it. Our windows then might be 4 feet 3 inches wide, and 8 feet 9 inches high; 2 feet 9 inches from the ground, and 1 foot 6 inches from the ceiling. Modern practice would, perhaps, recommend less distance from the ground, but I think the solid part below should be sufficient to obviate any apparent danger of the inhabitant falling out when the window is open. The dressings should probably be one-sixth of the opening as in the doorways, or less if of more solid character, and they should be similar to the mouldings of the doorway, though somewhat larger. If, instead of two, we introduce three windows, the space from centre to centre

* See page 219, *ante*.

ould be 8 feet 6 inches, two-fifths of which is feet 5 inches nearly, very little differing from at of the doorway, and admitting the use of e same mouldings; and this, in the general mmetrical effect of the room, is, I suspect, an dvantage. Such windows would be 2 feet inches from the ground, and 7 feet 3 inches gh, leaving more room than in the preceding heme for the cornice and window ornaments, d for the drapery which would embellish em.

Now let us suppose four windows. The dis-nce from centre 6 feet 5 inches, width of open-g, 3 feet 2½ inches, equal to that of the space tween them; height, three times the width, feet 7½ inches, carried down to within 1 foot inches of the ground, and leaving 2 feet for e space above. Dressings the same as to the ors. I see no important objection to such an rangement.

Whether the sides of the windows are splayed not, it seems difficult to obtain any simple finite proportions between the width, height, essings, and distance from the floor in the ndows and in the intermediate spaces, but ese in modern times are so much shrouded by apery, that their exact relations are of less nsequence.

The chimney is the last of these separate ems which contribute to the beauty of an partment. Its place is usually in the middle a small projection, at one end of the room. ith my usual partiality for definite propor-ons, I should recommend in the present in-nce, that this be two-fifths of the room, *i.e.* feet 3 inches, affording space for a flue on each de of the chimney. In larger rooms of a milar disposition, or where the flues are car-ed up at the back of the opening of the imney, one-third might be enough; but if the ace left on each side of the marble ornaments the chimney be very small, a disagreeable ap-arance of weakness is produced. It is better such a case to extend the marble over the ole projection. The ornamental dressings ght not to be less than one quarter of the ening, but as in doorways where much enrich-nt is used in the room, or where we aspire to gnificence a greater width must be given to e decoration.

Some years ago it was customary to put a sement round the room. Now we are usually ntented with a skirting. The width of this is o small to admit a comparison with the height the room. Where one dimension is two, ir, or perhaps six times the other, the eye idily catches the relation; but where it is as e to ten or twelve, the exact proportion is rdly sensible; yet there can be no doubt that ger and loftier apartments require larger uildings. The room in which I am now ting is about 10 feet high, and the skirting is inches, or one-eighth, with a projection of nches; and I should pronounce it rather too ge. I do not pretend to assign a reason for is judgment, and I can conceive that with a fferent style of finishing, I might possibly find not at all in excess. A skirting even twice at height, the upper part forming a plinth, but thout any surbase mouldings, might satisfy a actised eye. It was the mode at one time to roduce a complete entablature, in which case ollowed the rule of an external entablature, and upied about one-fifth of the height of the room. is has a heavy effect, and a complete outside rnice is theoretically an absurdity, as indeed is y cornice at all. The *rationale* of the thing ems to require an architrave, and nothing ore; and an enriched architrave of about one-eenth of the height of the room, which is out what it would be if a regular order were ployed, with the addition of some ornament the ceiling, makes a handsome and classical ish. What is now generally introduced is tirely fanciful, and lays no claim to classical thority; nor can I give any rule for its com-rative size; but a rather wide ornament on e ceiling appears necessary to produce a good ect. Indeed, there should be always some coration on the ceiling not immediately con-ected with the walls. Nothing but custom uld reconcile us to the plain whitewashed rface of our modern ceilings: yet even this is tter than the very silly attempt to paint upon a sky and clouds. In rooms like that before us a coved ceiling would perhaps be out of its place; but in large and lofty apartments the cove forms a considerable element of magnificence, and perhaps the more so because it is only in large and lofty apartments that it can be well introduced. It may be one-third, or one-fourth, or one-fifth of the width of the room. A small cove is only a feature in the cornice. Where it is one-half the width of the room, the two sides forming a waggon head, the room is reduced to a gallery, or in humbler language, to a passage. Some reference should be had to the shape of the room. If the length be one and a half times the breadth, a cove of one-third of the breadth would leave a centre two and a half times as long as broad; one of a quarter of the breadth leaves the centre twice as long as broad, and this, I think, a more pleasing proportion; with a square room, one-third of the breadth would look very well, and in general I should be rather inclined to diminish the cove than increase it, with the increased proportional length of the room.

A cove does not necessarily imply a panelled ceiling; but these items of magnificence often go together. In some of the Roman buildings the panelling is sometimes executed in the full depth of the entablature; but this has a heavy and displeasing effect. To make the depth that of a cornice seems less objectionable; but I should prefer giving to the parts the character of a small architrave, that is, with one comparatively large flat member, and a small moulding above, such as we find in the soffits of Grecian temples.

It will be unnecessary to enter into details in the back room, as the same principles will apply to both. Where this forms a square, or where the width from back to front is less than that from side to side, the partition between the two is sometimes omitted, and we have an L-shaped apartment. This is not a handsome form, but it may make a very pleasant and convenient room, and this arrangement will not appear disadvantageously in comparison with the folding doors we have before supposed, when the use of the whole apartment is required, but the latter gives more opportunity of using the rooms separately. If, however, the back room be as large as the front, I hold that the communication should be by folding doors.

With colour the architect in general has little to do. This falls to the share of the paper-hanger and upholsterer. The predominant colour may be red, yellow, or blue, relieved by other colours, and each set of colours may be beautiful; but in each, if the right shade, the proper modification of the tint be not preserved, the result will be disagreeable. A large portion of blue, and still more of green, has a dull and heavy appearance; and red and yellow, unless much broken, are gaudy, not to say tawdry. Besides, the furniture ought to be more splendid than the walls, and the ladies' dresses than the furniture, and it is difficult to preserve this gradation, if we begin with large masses of red and yellow. Whatever colour predominates in the walls, should recur in some degree in the carpet and furniture. Each part should be different, but all should be in harmony, and appear the result of one idea.

It is the fashion now to form carpets without borders, or anything to mark an appropriation to the apartment. They are merely bits of a pattern which may be extended to infinity. I doubt if this is in good taste. The carpet ought evidently to belong to the room, and I should apply to this, and still more to the hearth-rug, the rule that would require it to have a front, a back, and two sides, and not be everywhere alike.

J. W.

THE ARCHITECTURAL HISTORY OF LIVERPOOL.

RICKMAN.

We have now before us the fourth part of Mr. J. A. Picton's valuable paper on the Architectural History of Liverpool. The periods of tradition, collation, and historical inquiry are past, and we have now to examine the progress made almost under our own eyes. The view is brought down to the year 1835, the year in which Gage's large map was published. In 1801, the population of the town was 77,653; the number of houses, 11,466. In 1831, the population had reached 205,974, so that in 1835 it may fairly be estimated at 220,000. The number of inhabitants had not increased in an equal proportion during the whole of this period. The ten years from 1825 to 1835 had produced almost as great an increase as the preceding twenty years.

Before giving a few extracts, we would observe, with respect to the paper, that if the same thing were attempted in each of our large towns, by competent hands, great advantage would result.

Mr. Picton reviews at some length the extension of dock accommodation, and the improvements effected in the more ancient part of the town between the years 1803-35. In the year 1825, the first Building Act for the town of Liverpool was passed. In 1835, this was repealed, and a new Act passed for the same purpose, which was again repealed and reconstructed in the year 1842, which Act still remains in force. There can be no doubt that an Act of this nature was imperatively required. In a few special cases the restrictions may cause unnecessary trouble and expense, but on the whole the public safety is secured; the extension of fire from house to house is prevented; and, to some extent, what is technically called "slop work" and "scamping" is guarded against. It is a delicate point to determine exactly the extent to which private enterprise can be advantageously interfered with by legal restrictions in any occupation. The principle of "*salus populi suprema lex*" is no doubt correct, but its application requires great judgment and discretion. Manchester has no Building Act, whilst Liverpool has one somewhat stringent. It would be an interesting subject of inquiry to determine the advantages of each system, and on which side the balance preponderates.

Another class of improvements which took its rise within the period of which we are treating was that of the public covered markets. St. John's Market was commenced in the year 1820, from the designs of Mr. John Foster, the corporation surveyor of the day, and was completed and opened in 1823, when the market was finally removed from Castle-street. In point of convenience and adaptation to its purpose, St. John's Market possesses one great advantage—that of simplicity. A right-angled parallelogram, surrounded by streets on the four sides, and intersected by avenues, longitudinally and transversely, it is simply a large area protected from the weather. The mere size of a covered area, 183 yards by 45 yards, enclosing not very far short of two acres, imparts a certain air of dignity to the erection. To architectural merit it can hardly lay claim. The heavy carpentry of the roof, and the narrow space covered by each bay, give a feeling of lowness, and almost of gloom. Much allowance must be made for the time when it was erected. Thirty years have done much in the way of iron roofs, plate-glass, and bold spans. What a noble effect would be produced by a similar area spanned by a roof like that of Lime-street railway station, and covered partially or wholly with glass.

Everton may be said to have reached the height of its beauty and attraction as a suburb about the year 1821. The crown of the hill and its western slope were sufficiently built on to take away the appearance of baldness or nakedness, and yet not so densely as to crowd it inconveniently. From the umbrageous foliage of their gardens and pleasure-grounds, noble mansions, in tier above tier, looked out on a lovely landscape. Town and country, land and water, lay stretched beneath their view, whilst the distant sea, on the one side bearing to its favoured port the products of all climes, and on the other the undulating outline of the distant Welsh mountains, afforded a background worthy of the scene. Everton was at that time a suburb of which Liverpool had cause to be proud. The only naturally picturesque piece of scenery in the neighbourhood, art had come in to heighten the effects of nature, and the result was in every way beautiful.

From this date a perceptible decline began to manifest itself. The gradual extension of building northward in the valley below obscured what had hitherto been a beautiful green landscape. The chemical and other works esta-

blished on the banks of the canal began to vomit forth clouds of dense smoke and noxious vapours, which, carried by the west winds against the slope of the hill, killed the trees, withered the herbage, and destroyed the beauty of the locality. Concurrently with this, the pressure of the town north-eastwardly caused a demand for building land which soon began to elbow out the aristocracy.

The alteration of thoroughfares greatly changed the value of property. For example—About the year 1807 a house in Church-street was purchased for 600*l.* In 1848 the same tenement was sold for 3,500*l.* A little before this, an old building in the same street, which formerly let for about 20*l.* per annum, was sold for the mere site at 38*l.* per square yard, or in the whole for about 3,700*l.*

The introduction of two additional kinds of building material towards the latter part of this interval has already exercised great influence, and is destined to exercise still greater, on the architecture of our streets. I allude to Roman cement and plate-glass. Whether the influence of these materials on design is always of a legitimate character may well be questioned, but that great facilities in design are afforded by them in renovating old buildings, and relieving the dingy lines of flat walls with something like decoration and taste, no one will deny. Roman cement, or compo, was first used in Liverpool as an external coating to the front of buildings about the year 1820. The first buildings so treated were a range of houses on the south side of Islington, belonging to Dr. Solomon. The first plate-glass used for shop windows was a single small square in the window of Messrs. Tobias and Co. watchmakers, on the north side of Lord-street. I am not aware of the exact date, but it would probably be about the year 1815. It long continued the only one of the kind in the town, and was greatly admired accordingly.

The period of which we are now treating was distinguished by the introduction of several social improvements, which have exercised a most important, though indirect, influence on the extension, the buildings, and the architectural decoration of the town. Gas-lighting was first introduced into Liverpool in the year 1819. Up to that date, the gloominess and obscurity of our streets had been a standing reproach with strangers. Since that period, the brilliancy of our shops and the enlightenment of our streets have left nothing to be complained of on that score. In 1815, the first steam-boat began to ply on the river Mersey. The first result of this improved mode of crossing the stream was the founding of a rival city on the opposite shore. Birkenhead Hotel and ferry were established in the year 1818, and in the following year the church was commenced, from the designs of Mr. Thomas Rickman, from which time the progress of the town of Birkenhead, though not uniform, has been rapid, and indeed marvellous.

The Liverpool and Manchester Railway was commenced in 1826, and opened on the memorable 15th September, 1830. The Lime-street station was opened in 1836. To dilate upon the progress of the railway system at home and abroad would be here out of place; but reference may legitimately be made to the new class of buildings which it called into existence, in the stations, offices, warehouses, and shed roofs. Many of these are magnificent in design and daring in execution, and have given rise to almost a new style of architecture. The large roofs, whether in timber or iron, have called forth a wonderful amount of skill in carpentry. Of these, the most beautiful and bold which has yet been constructed is decidedly the one over the terminus in Lime-street, which is as fine a specimen of carpentry in iron as the country has hitherto been able to produce.

The indirect influence of the railway system has been injurious to the architecture of Liverpool, by its tendency to abstract the higher class of inhabitants, and thus still further to reduce the tone of the dwellings erected within the town. To such an extent have these combined causes operated, that it seems probable that, in the course of time, the buildings within the town will consist of little else than warehouses, offices, public buildings, shops, and cottages.

It remains to notice the progress of architecture in Liverpool between the year 1803 and 1835, as evidenced in the public buildings erected within this period. The churches naturally claim attention in the first place. We have already seen that church architecture reached its lowest point of depression in Liverpool at the end of the last and beginning of the present century. After the erection of St. Mark's Church an interval of ten years took place, during which no church or other place of worship was built in the town. St. Mary's, Edgehill, was commenced in 1812, and opened in the following year. Placed on the highest pinnacle of the hill overlooking the town of Liverpool, the tower of this church is visible for many miles on every side. The site was one to have stimulated mediocrity into genius, and to have prompted the founders and the architect to put forth every effort to produce something which should be worthy of the occasion; but, alas, there was no responsive voice to the call. The opportunity was lost, never to be recalled. A plain brick parallelogram, with pseudo-Gothic windows and square brick tower, lifts its audacious front, and publishes in the most conspicuous manner the state of the arts in Liverpool at the date of its erection.

The dawn, however, of a brighter day was at hand. The study of ecclesiastical architecture, which had been taken up by Walpole, Bentham, Grose, and others, at the end of the last century, had produced its fruits and ripened into practice, feeble and timid at first, but acquiring additional facility and power with increasing knowledge and study. The so-called Gothic churches hitherto built in Liverpool had been mere burlesque caricatures, without the smallest spark of feeling or appreciation of what constituted the simplest principles of the style; but a new era was about to dawn; and the church which will ever be memorable as being the first in this locality in which the study of pointed architecture appeared in the form of a practical result was that of St. George's, Everton. The first stone of this church was laid on the 19th of April, 1813, and the building was completed and opened in the following year. The architect was the celebrated Thomas Rickman, a slight notice of whose career may be here introduced, as being closely connected with the subject of which we are treating. Mr. Rickman was brought up in a mercantile office in Liverpool. I am not aware of the peculiar circumstances which turned his attention to the study of ecclesiastical architecture. Belonging as he did to the Society of Friends to the end of his life, it is one of the last studies one would have expected him to devote himself to. However this may be, he had made some progress in it, when, about the year 1809, he was requested to write an article on architecture for "Smith's Panorama of Science and Art," then in course of publication in serial numbers by a Liverpool publisher. This article, which contains the germ of his subsequent work on architecture, attracted considerable attention, and brought Mr. Rickman into notice — so much so that he very soon found it his interest to devote himself entirely to the practice of architecture as a profession. St. George's, Everton, was one of the earliest, if not the very first of his works. That it exhibits an immeasurable advance upon anything in the Gothic style previously attempted in Liverpool is unquestionable, the tone, character, and motive of every portion of the composition being derived from careful study of ancient examples. This, however, is nearly all the merit which can fairly be awarded to it. As an original design it is stiff and feeble, the common fault of all early attempts to resuscitate an extinct style, whether in art or literature. The detail, both external and internal, is meagre and thin. This effect is doubtless heightened to a great degree by the material in which a great portion of it is executed—*cast-iron*. Whether this material was adopted for the sake of economy, or because of the difficulty of obtaining masons capable of working the tracery in stone, or that an artificer in iron was concerned in the erection of several of these edifices, certain it is that the earlier works of Mr. Rickman have this character of slenderness and poverty impressed very strikingly upon them, by the use of cast-iron as a portion of the structure.

Forty years have done much towards the growth and development of that germ planted by Rickman, and it cannot be denied that in many modern structures the genius of the Pointed style shines forth with far more brilliant lustre than in anything ever designed by him. This is natural and to be expected; but when we consider the difficulties by which he was surrounded, and the utter absence of all such aids as now abound for the use of the architectural student, our wonder should be, not that he did not accomplish more, but that he accomplished so much. His great merit is that of having opened a sealed book,—of having furnished the key to the buried treasures of a forgotten art,—of pointing out the way to his successors of attaining a deeper infusion of the spirit and feeling of mediæval architecture than it was possible for him, under the circumstances, to obtain.

In the year 1815 two new churches were opened,—St. Michael's, Toxteth-park, and St. Andrew's, Renshaw-street. The first named, which bore for a long time the *sobriquet* of the "cast-iron church," was designed by Mr. Rickman; and though differing in some respects from St. George's, Everton, it is characterised by the same peculiarities as we have already noticed in that edifice, and especially by a still more profuse admixture of the metallic element. St. Andrew's Church has no pretensions to design in the proper sense of the term. The object aimed at was to provide seat-room for a large congregation at a moderate expense. This object has undoubtedly been accomplished in a satisfactory manner, and it is scarcely just to expect more.

St. Philip's, Hardman-street, was opened in 1816. This church was also designed by Mr. Rickman. In its general aspect it somewhat resembles St. Jude's, erected at a later period by the same architect. The material is brick covered with a thin coat of compo, which scarcely hides the joints of the brickwork. The windows are of the depressed Tudor form, with the slender cast-iron tracery already alluded to. Hollow octagonal turrets are carried up at the angles, crowned with spirets, ornamented by cast-iron crockets. The absence of any central or aspiring feature to carry the eye upward is the great defect in the external design of this building.

It is worthy of note, in commenting on the churches of forty or fifty years ago, that their plainness of aspect does not appear to have been compensated by any special economy in the outlay. St. Mark's is said to have cost 18,000*l.* St. Andrew's and St. Philip's each about 12,000*l.* being at the rate of 10*l.* to 12*l.* per sitting—a much higher rate than many modern churches have cost with the Pointed style fully carried out, and inclusive of tower and spire.

We now quit the cast-iron period of Ecclesiastical architecture. Mr. Rickman soon after this time removed from Liverpool to Birmingham, and was not again professionally employed on any public building in Liverpool until the erection of St. Jude's, in 1831. Mr. Rickman was the architect of Birkenhead Church, which was built in 1819. This building possesses more of the general mediæval spirit than any other of the churches by the same architect in this locality, and is in every way an exceedingly creditable performance. The next church which claims our attention is one of an entirely different character, and is probably the last of the school of Gibbs and Wren which will be erected in this neighbourhood for a long time to come. The first stone of St. Michael's, Pitt-street, was laid in June, 1816. After being carried on to some extent, the works were stopped for want of funds. The parish, which had commenced the undertaking, demurred to proceed with it on account of the expense. At length an arrangement was made by which it was handed over to the corporation, at whose expense it was completed, and opened in 1826. Although the design cannot, perhaps, lay much claim to originality—the portico and steeple being palpably modelled, as to their general principle, on those of St. Martin's-in-the-fields in the metropolis—the yet the building, as a whole, is noble and effective.

The next church erected in Liverpool was that for the use of the blind, originally situated on the east side of Hotham-street, and since re

moved and re-erected in Hardman-street. The ublication of Stuart and Revett's work on the ntiquities of Athens, at the end of the last and the eginning of the present century, roused public ttention to the beauties of Grecian architecture, itherto unknown and neglected. The public dmiration thus excited speedily assumed the haracter of a mania, or rage. Greek architecture as adopted in all possible and some almost mpossible situations. Shop-fronts, porticos of welling-houses, banks, gin-palaces,—everything as to be modelled from the Parthenon, the rectheum, or the temple on the Ilyssus. The imax of this mania was attained in the exenditure of about 60,000*l.* in the erection of ie new church of St. Pancras, in the metroolis, into the composition of which copies of many Greek temples were adopted as could possibility be crowded together. The late Ir. John Foster, the architect to the corporaon, had visited Greece, in company with Mr. ockerell, R.A. and was naturally imbued with love and admiration for the glorious remains antiquity in that country. Greek architecture, one or other of its forms, was introduced by r. Foster into most of his principal works. ence it is not surprising that, in designing the hurch for the Blind, he should have adopted r the west portico an adaptation of the Temple Jupiter Panhellenius in the Island of Ægina. n its original position, this church was somehat imposing. Surrounded by an ample open ea, the columns placed upon the usual receding ylobate, its massive proportions developed emselves in all their boldness. The body of e church was a plain quadrangular structure, erced with one range of windows having chitraves and cornices. The design of this ilding has one radical defect: the portico, not tending the entire width of the front, does t arise naturally out of the structure, but pears a separate design, stuck on, so to speak, the body of the building, with which it has accordance or apparent connection. The ilding has suffered considerably by its migran to Hardman-street. Cribbed, cabined, and nfined, its receding stylobate cut off close to columns, it presents a most forlorn and olate aspect—the mere shadow of a transient te which never took any permanent hold ongst us.

The chapel of St. James's Cemetery, erected the same architect in the same style, is rthy of greater commendation.

The next church to which we turn our attenn is of a very different character. St. Luke's, ected by the old corporation of Liverpool, gardless of expense, and dedicated to their iron saint, was intended to embody the ghest conceptions extant of ecclesiastical chitecture. A design for a church on this site s made about 1811. The first stone was laid the enclosure walls built soon after this e. These were solid and lofty pieces of sonry, with arched, monastic-looking gateys, which have since been taken down. From ne cause the works were suspended for many ars; but they were at length resumed, and church finally completed in the year 1831. e design is nominally that of Mr. John Foster; t, as it is certain that his studies were never rsued in the mediæval direction, there is no k of charity in crediting the common report, ich ascribes the design to his assistant, Mr. wards. Be this as it may, for excellence of sonry, careful execution of the several parts, l attention to detail, the design is deserving much praise; but as an original composition nust be pronounced a failure.

Mr. Picton then describes the various other arches in the town, and approaches the raily station in Lime-street. The front of this tion was built from the designs of Mr. John ster, about 1835. It has been of late the hion to decry this building, and to rate it as v in the scale of taste as it was unduly lted at the time of its erection. Probably th may lie between the two extremes. The lding is unfortunately situated. Comparisons no doubt odious, but in this case a comrison forces itself on the mind of every spec-or between the classical purity of taste nibited in St. George's-hall and the somewhat rse detail of the railway screen. This comrison is unfair. The style adopted in the latter is impure, and depends for its effect on bold and decided features—rough and coarse, perhaps, in themselves, but, when well managed, capable of striking effects. It must also be remembered that it was erected in the infancy of the railway system, before the gigantic propylea of Euston-square had been conceived, or the magnificent vistas at Chester and Derby so much as dreamed of. Under any point of view, it is by no means the worst of its architect's productions.

The great building of the epoch—the one which should give its tone and character to this period, as the Exchange-buildings did to the one preceding, and St. George's-hall to that which followed—is undoubtedly the Custom-house. In area and bulk it is the largest building in Liverpool, and probably the most costly. Size and bulk are powerful elements in architectural design, but they are only the platform on which other and superior elements should be based; and in proportion as the baser or the nobler ones prevail, mere bulk adds either deformity or dignity to the structure. In surveying the custom-house in all its length and breadth, insensibly one calls to mind Milton's description of the *physique* of Satan, who

> "Prone on the flood, extended long and large,
> Lay floating many a rood; in bulk as huge
> As whom the fables name of monstrous size,
> Titanian, or earth-born, or that sea beast
> Leviathan, which God, of all his works,
> Created hugest that swim the ocean stream."

The first view of the building conveys to the mind a general impression of heaviness which it requires some consideration to account for, since the proportions of the order employed—the Ilyssus Ionic—are by no means the heaviest of those in general use. Everything is severely classical: each moulding has been accurately measured, and the minutest details are, no doubt, strictly *en règle;* yet life is wanting—sadness and gloom preponderate to an almost painful degree. May not one principal reason for this be that in the three principal fronts the desire to be strictly classical has choked and stifled the least manifestation of original thought? Each front, *except the one on which the sun shines*, has an advanced portico, with a pediment. Each wing has a recessed portico. Pilasters, or antæ, break round the angles; and these arrangements, with windows "few and far between," constitute the design. These are no indications—such as are stamped on every line in St. George's-hall—of careful study and creative power. The only portion of the exterior which bears anything like a cheerful expression on its façade is the south front, which, being considered the back of the building, has had the least care bestowed on it. The simple ranges of arched windows, and the breadth of rusticated wall associated with them, with the depth of the masonry above, crowned by its bold entablature, without either portico or pilasters, give a noble simplicity and unity of effect, combined with that pleasing play of lines which a range of arches in perspective always produces. Another cause of the heaviness of this building is the naked bareness with which it is carried out and the material with which it is built. A Greek temple, built with white marble, glistening under the blue sky of Athens, its mouldings encrusted with carving, its frieze adorned with sculpture, and probably glowing with brilliant colours, would present a very different aspect to the most slavish copy of the same building in the murky atmosphere of Liverpool, built with dingy sandstone, and all the sculpture which gave it life and character omitted.

The writer thus concludes,—Contemporary criticism is always invidious, and very frequently unjust. Works demanding creative power, whether in literature or art, require distance both in time and space to bring out their proper proportions. Examined from a point of sight too near, they frequently appear distorted. Like the Frenchman who ran about in the crowd crying "Vere is de mob, vere is de mob?" we are too apt to forget, in judging of contemporary works, that we are ourselves a part of the crowd, partaking of the passing prejudices of caprice and fashion, which unfit us for judging aright, and looking through a medium which is almost sure to exaggerate either faults or beauties. Such has ever been the case. The magnificent creations of Vanbrugh were for long the butt and laughing-stock of every smatterer in the art, whilst the compo glories of Nash and the trivialities of Soane were trumpeted forth by the breath of contemporary fame as attaining the summit of perfection.

Time alone can clear the atmosphere and purge the vision; and when the period shall come for a bolder and more skilful hand to complete the picture of which the outline has now been sketched, there will be found, in addition to many probable corrections in the appreciation of our older works, much during the last eighteen years worthy of careful study and honourable mention.

RICHARD CŒUR DE LION.

PERMIT me to suggest a place where the type of English chivalry may rest his noble charger, and display his manly proportions to the admiring multitude, after his unsuccessful encounter with Sir Charley of Westminster, who has certainly stolen a march upon his namesake, the Baltic pet, by being the first to throw his royal antagonist. When the alterations were effected in front of Buckingham Palace, two triangular pieces of land were taken from St. James's and the Green parks for no better purpose than to be utterly useless and unsightly. Now as they are there and of no present use, I suggest that the angle at the foot of Constitution-hill will be found a most appropriate and eligible position for the erection of the equestrian statue before named.

If placed facing the Palace, the bend in the road will enable even pedestrians to see both sides of the statue, as also the front. The other corresponding angle next to the Wellington Barracks would accommodate Wyat's statue of the Duke, and relieve the public from longer being annoyed by seeing the hero of a hundred fights stuck up on the top of Grosvenor-gate, and the archway preserved from eventual ruin.

H. B.

THE OUTWORKS AND FORTS OF PESTILENCE.

TALLOW wanting, palm-oil increased in price,—gas thoroughly purified, and the latter *must* shortly be laid on from basement to attic.

It becomes, then, a question for immediate disposal, *where* we should manufacture our gas, and *how* convey it to the consumer. The most offensive and pestilential nuisances in London are its gasworks: they occupy a greater extent of valuable space than any other manufacture, and are more arrogant deformers of architectural beauty than any other erections in all the metropolis.

Every one of those hideous gas-tubs represents so many more poor families thrust into crowded death-dens,—so much more smoke thrown into the murky atmosphere that chokes us,—and are so many veritable forts, securing, by their invisible poison batteries, the great citadel where pestilence holds civilization at bay.

I would suggest, then, the appointment of a commission to ascertain by *experiment* how far the source of supply may be removed from the meters,—the size of pipe best calculated to admit of a maximum distance being at once attained, the mode in which those pipes should be constructed so as to economize their contents,—and lastly, the expediency of adopting a mode of conducting the pipes other than the present wasteful, poisonous, inconvenient, and slovenly one of burying them in the earth, at all events in *loose* earth. One word more,—our mode of correcting mistakes in this country is very characteristic of our heedless form of government. In order to make drain-pipes for the Board of Health, we have created in the most crowded, unhealthy, and central position in the metropolis, a vast congeries of flues, which, vomiting their smoke at the ordinary house-top level, emit it in inordinate quantities and at all hours, and then allow them by Act of Parliament a special exemption from enactments directed against the very nuisance of which they are the most flagrant and noxious examples. How long shall the senatorial robe enfold no better gift for the country than the dagger of the commercial assassin? Is "a good time coming?" or

ADEST NOX?

AN ATTIC PHILOSOPHER ON LONDON SMOKE.

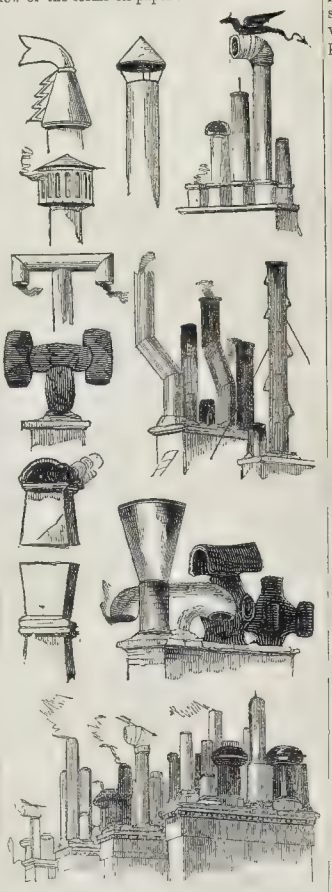
WITH VIEWS OF SOME TIP-TOP ARTICLES.

"A smoking house, a scolding wife."—*Old Proverb.*

"Oh! he's as tedious
As a tired horse, a railing wife,
Worse than a smoky house."
Shakspeare, *Henry IV.*

I AM a man who lives high, without being fond of high living,—one who moves in an elevated position without being a bit better off than his neighbours. The view from my place—lodgings, or whatever it may be called—is, for London, very extensive. Whether I have a wife or not, or, if having one, whether she scolds or not, is neither here nor there. I may, however, state that I know what smoke is. I have seen puffs of it—sometimes in the north wind, sometimes in the east wind—in fact, from all points of the compass, both cardinal and intermediate: these winds have caused *volumes* which have not only disguised and blackened the temper of the human portion of my household, but also altered the "fair face" of every natural object. If I don't smoke myself, I have a chimney that does.

From my point of observation, which is as lofty as the belfry of some churches, I can see immense ranges of houses of varied construction—neighbourhoods in which health is good and others in which fever and death are constantly at hand. I can in ordinary weather see houses and neighbourhoods vanish into tints of grey distance, and then these tints fading until they cannot be distinguished from the sky: still it is all London—peopled by rich and poor, who all, with the exception of the chimney-sweeps, would gladly be rid of the soot and smut so well known and so abominable.



I can see many chimneys of all sizes and construction: smoke is pouring from the chimneys of the gas-works; the tall chimneys of the workhouses in which the food of the inhabitants is cooked and managed by steam and machinery: smoke comes thickly from the Gothic shaft of the City Prison and from the model prisons—from baths and washhouses, which thus inconsistently undo their useful work; from manufactories, bakers' ovens, breweries—from the boilers and melters of *Belle Island*,* where slaughter-houses and producers of glue, cat-gut, poisonous acids, and such like, have removed from the valley of the Fleet: there are other smokes too numerous to mention.

It is said, and sanguine persons hope, that the sable clouds above enumerated will be dispelled by an enactment of Parliament during the present session. This is "a consummation most devoutly to be wished;" and yet even this boon will not so materially affect me: my chimney will still puff—my temper will be ruffled: in the houses of the poor, men and women will be smoked—the lungs of children will be loaded like chimneys, and by the pile upon pile of dwellings which I now see, a partial darkness must daily be caused.

I have looked up my chimney,—have spoken to the sweep, who explained his words with movements or passes of his hands, speaking of down currents, drafts, and other things to me unintelligible: I have spoken to the landlord, who has put up a kind of zinc engine surmounted by a caterpillar-shaped head, on the top of which is a dragon which moves round and round like the weathercock of a church: this has, alas! had no effect. I have spoken to various smoke-doctors, builders, bricklayers, and other persons: one tells me the chimney is too wide, another that it is too narrow—some say that it wants to be bent, and others that the engine on the top is not of the proper construction, and that they know the very thing which will stop the smoke: in fact, every one of these practical men seems certain that he can put an end to this nuisance if he had the opportunity.

I look out of my garret window and view with despair the large number of chimneys which, like my own, have been fitted with many-shaped pots, some like Turks' turbans; a great many with the caterpillar and dragon, arrows, and in some instances lion tops: some are lofty zinc tubes, which in some instances are pierced with holes at the sides: some get narrower at the top, and others wide like an ale-funnel: others are made of tile and of strange and weird shapes: but space could not possibly be spared for only a brief mention of these varied inventions. An observant person, particularly if he is troubled with a smoky chimney, will not fail to notice that the forms of the tops of the stacks of chimneys are perpetually changing, like the ladies' bonnets: week after week workmen may be seen in dangerous positions, substituting the caterpillar-top for the Turk's head, or a longer tube for a shorter, placing little wires like lightning conductors in the middle, occasionally putting arms on the tops, which sometimes throw the smoke up and at others down: all this, however, seems to be without effect.

I sally forth from home, wander along street after street, and get more and more astonished at the variety and ingenuity which man has displayed at the tops of chimneys. In the wide thoroughfares of Islington and Camden-town, in the narrow turnings of Clerkenwell, in the City, on the Royal Exchange, in Regent-street, Pall-mall, at Whitehall, in St. James's, in Brompton, on the most beautiful buildings, on the houses of personages of the most fastidious and excellent taste, the abortions at the tops of chimneys disfigure the architecture, and by their association annoy the eye. Here you have a few of the forms on paper:—

Charming, are they not?

I heard many opinions during my journey: one person observed that the more wealthy the inhabitants of a dwelling are, the more they seem troubled with smoke: the houses of many of the cabinet ministers and members of the Legislature seem sadly deformed. Another mentioned, that although it was bad enough to have his rooms filled with the smoke of his own fires, yet, when he gladly put them out, he had visitation of stale and unpleasant smoke from neighbours—blowing into bed-rooms and drawing-rooms, dying the flowers and summer ornaments of his fire-places. A third—and "in the multitude of councillors there is wisdom"—urged that the space at the bottom of the chimney should be lessened, so as to make the rarefaction quicker, and greater. One said that Dr. Arnott had perfected the invention of a fire-place, which, by being lighted at the top, would consume every particle of smoke. Another mentioned German and such stoves: others said they were unwholesome; and one told how that the Institution of Civil Engineers were discussing the subject, and thought that they would settle it; and after a tedious journey I returned to my smoky place, more than ever impressed with the extent of this evil—more than ever puzzled, and more than ever astonished with the *ingenuity which has been displayed* at the tops of chimneys, and impressed with the belief that, if the same trouble had been taken at the bottom, you would not have had this long complaint from

Your obedient servant,

SMOKE-DRIED.

P.S.—Since writing the above, I see that you have mentioned an arrangement by which the smoke can be made white by a good washing with water, in the same way as a dirty shirt. Success to such a laundress! This is what I found when I got home. Talk of patience!

* I believe that this place, now so filthy, received its name many years ago from a party of French refugees who settled there.

LABOUR AND CAPITAL.

THE discovery of the most efficacious means of improving the condition and elevating the character of the working majority of mankind is a social problem which has not only exercised many minds in the present age, but is likely to require the best thoughts and suggestions of more than one succeeding generation, unless it be unexpectedly solved by the sudden effulgence of some great truth only glimmering through present discussions, and of which political and social economists have not yet taken sufficient account. A book, by Mr. C. Morrison, has been recently published, containing able discussions of various important questions connected with the general subject;* and, although there are conclusions with which we cannot agree, still the general tenor of the whole essay comprises a development of many points more briefly advocated in a like spirit in our pages.

The examination of the relations between the working-class and the class of employers, for the determination of the question as to whether and to what extent, these can be modified or superseded with advantage, constitutes the particular portion of this great subject treated of in the essay.

Commencing with a statement of the natural laws upon which the remuneration of labour, or in other words, the income of the working classes, necessarily depends, the author proceeds to test by these laws the merits of the principal plans which have been tried or suggested for increasing this income, and concludes with a description of the means indicated, as he con-

* "An Essay on the Relations between Labour and Capital. By C. Morrison. London: Longman and Co. 1854.

ceives, by these laws, as the best adapted to effect the improvement of the workman's condition, and with a general view of the extent to which he thinks this improvement may be carried into practice.

One leading principle discussed is that of co-operative association as *contra-distinguished from* communism or socialism. Although the author states strongly the objections and difficulties which he conceives to be in the way of this principle under all its forms, he acknowledges himself at same time to be so impressed with the great social and political advantages which would result if it could be successfully introduced into our industrial system to a very considerable extent, that he seems unwilling to rest in a pure and simple condemnation of the system. He has, therefore, given some account of the conditions and forms under which the trial of co-operation might, as he thinks, be undertaken with the fairest prospect of success, and expresses a hope that it may be eventually and gradually established, not to supersede the present organization of labour, but to take a place along with it in those departments of industry to which it may be found most applicable; and he dwells upon the reasons, of a moral, social, and political character, which make it very desirable that the working classes should have every facility afforded them for making the experiment under the most favourable circumstances, and in as many ways as possible, whatever may be thought of the probability of ultimate success. To this end he advises the Government to allow a trial, with certain restrictions and modifications, of the principle of limited partnerships, although what he has to say on this subject also turns much rather on its possibility of abuse than on its advantages. But indeed the very nature of a work on so difficult a subject leads an author rather to look to adverse or objectionable than to promising or hopeful aspects; and as regards the working classes themselves even, rather to dwell on the faults and errors prevalent among great numbers of them in this country than upon the very large amount of good qualities displayed by them; but on this very account, what this author does recommend as hopeful or advisable may be safely regarded as all the more worthy of favourable consideration; for so far from betraying an *animus* against the class of whose interests the author is treating, this is the very spirit by which their best friend ought to be actuated.

"The views intended to be expressed," says the author, "are democratic in the best sense of the word; that is, *they contemplate an eventual approximation to equality among all classes of society, not by the depression of those above, but by the elevation of those below*; while they are as far removed as possible from that other kind of democracy which proceeds by pulling down and subverting, and has been on trial for sixty years in France, commencing at each effort with confusion and carnage, to end in despotism."

Even in France, however, the power and influence of property (however trifling in extent) among the labouring class itself, chiefly, it is true, in the agricultural districts, was found to constitute a conservative bulwark against all socialistic and ultra-revolutionary efforts, which finally assisted to an immense extent in resisting and overcoming them. On this account France has been an example as well as a warning; and although there are objectionable points in the *prolétaire* system of France, especially as regards its hopeless *hamperment*, if we may use the expression, by mortgages and debt, still it shows the power and advantage, in favour of law and order in a country, of having a working class with a property or money stake in the commonweal. In a commercial and manufacturing country such as this, that stake ought to be based, as widely and firmly as possible, on the manufacturing and commercial businesses in which the people are mainly engaged; and hence the advisibility of opening the way, as far as possible, by a law of limited partnership, to the infusion of a working-class interest in partnerships and profits. Improvident and intemperate habits will certainly oppose strong obstacles to the rapid extension of this most desirable result; but it may be well to consider how far the very want of such opening and opportunity has fostered and increased both improvidence and intemperance; and if it *has* done so, then most assuredly the removal of such a *cause* will be very speedily followed by a vast diminution of the *effect*. It would be well for all classes that something should be done towards the accomplishment of this grand desideratum of *giving*, shall we call it, the working classes a property-stake in the country, ere their power in the Legislature become much stronger than it is; and that it will ere very long be so, the introduction of such a "Reform Bill," as the late, or rather the present one, by a legislator such as Lord John Russell, after all previous protestations of *finality* in such reform, affords us a very significant assurance.

We may here observe that the co-operative principle is about to have a sort of partial trial at Edinburgh, where the Queen's Printer, Mr. Constable, has spontaneously made arrangements whereby his workmen, over and above their wages, shall have "a per centage of the profit from the business," which, however, he prudently refrains from making over to them legally, so that the grant will very properly depend upon the good behaviour of the individual workman. In such an arrangement, though expressly made from philanthropic motives of brotherly regard for the working co-operators in his business, as to which Mr. Constable, in his announcement to his men, enters into a very kindly and Christian peroration,—we are, moreover, convinced that he will find his account, even economically and profitably considered. He himself says,—"As the amount of profit arising from a business depends upon the prudence with which its details are managed, as well as on the amount and nature of the work performed, it will be manifestly for the interest of all, that each individual in the establishment shall be diligent and active; that by those at the head of it as well as by the youngest apprentice, the hours of labour shall be faithfully employed; and that from a cylinder-machine to a hair-space, every article in the house shall be economised."

Though not very closely or relevantly connected with the branches of the great social problem just adverted to, there is one point in regard to the general welfare of the working classes to which we should like to draw a little attention. There seems to us to be a hitch in the general law of demand and supply which ought to be more closely looked into than it has been by political economists. There is often great talk of a want of *demand* for such and such articles. Now, so far as regards everything essential to the welfare or comfort of *all*, there can really be no want of demand—of crying necessity—for such articles, so long as *any want* them. Yet it often does happen that while thousands are in absolute *want* of such necessaries, or comforts, there is a want of *demand* for them, which may in many cases arise from the very extremity of helpless misery and idleness to which some *other* want of *demand* has reduced a class who sadly do *want* them, while probably those who produce them, stand as greatly in real and absolute *need*, of those very other articles of demand, the manufacturing of which would have enabled the idle hands to provide them with by means of the *money* wages spent in supplying their own demands.

That this may be made a little more clear, let us reduce it to some simple instance. Let us take two classes of the humblest sort of producers, most exclusively dependant on each other. Suppose we turn to Irish habits and necessities for such a case, only planting the two *wanting* classes in different parts of England. Let one of these classes be producers of the coarse duffle, or other clothing, which the other wears; and the others producers of the main staple of food which the cloth producers consume. Under present circumstances, neither can purchase the goods of the other without money, and they cannot obtain money without producing their respective articles of manufacture. Although the general working of the law of demand and supply be compensatory and unobjectionable,—so soon as it occurs—as occur it often will and does—that both these classes are placed on short work and short allowance of wages from any cause, or thrown out of work altogether, neither will be able to purchase what they most *require*, and the anomaly presents itself of two classes of persons, almost entirely dependent on each other, and ready, and willing, and anxious to supply each other's wants or demands, yet unable to do so! True that, in general, as we have said, the law of demand and supply *at length* provides a remedy; but that is not sufficient for those who live from hand to mouth, as those with low wages at any time must do. True that here is the point where the middleman—the trader—steps in; but even he is objectionable, because he immensely overdoes what his calling is or ought to be. Why should these two poor classes of men have a whole series or row of middle-men standing between them merely to *hand over*, and separating them by "so long a chalk" from each other, feeding meanwhile on their potatoes, and covering themselves with their clothing, to so unnecessary and aggravated an extent enhancing the price of these articles to the two poor consumers and producers, who, were they face to face, or only separated by the barely requisite supply of non-producing middle-men, who live upon their productions, would be able to supply each other's demands on the most moderate terms, in the utmost abundance, and with continual readiness. There is a hitch, we think, here in the grand law of demand and supply, which prevents it from being *all* that could be desired. It reminds us of the anomalous practice of our modern poor-law system, whereby able-bodied paupers, men simply out of employment from a want of demand for the fruits of their labour, are kept in compulsory idleness or unprofitable labour, while being supplied with their necessaries at the expense of the industrious, all the while that they are perfectly *able* and *willing* to produce their own necessaries, or an equivalent for them in some other form of valuable production. Considerations such as these cannot but induce us to be dissatisfied with the present state of things, at the same time that we acknowledge the existence of difficulties in the way of amendment.

All readers who interest themselves in the prospects and progress of the working classes will find enough to interest them and to think of in the present well-digested and able essay. As to those who do not so interest themselves, we would, by the way, remind them, in the words of Miss Bremer, that "There is a peculiar kind of joy which a person feels in being a partaker in great and good undertakings. We do not believe there is a nobler and better on earth. It is a joy which elevates his consciousness and strengthens all his powers."

COMPETITION PREMIUMS AND ARCHITECTS' PRACTICE.

I SEE that in your last number "An Architect" writes to complain of the smallness of competition premiums, and of the tricks of competition committees. It is undeniable that the former grow smaller and the latter grow shabbier every day; and so, I am sorry to add, do the architects. The evil, however, lies with architects themselves, not with committees; for how can these be expected to study what is due to professional etiquette, when not an architect in the kingdom can define it.

Instead of there being (as there ought to be) one recognised society, corporation, or institute, to which all reputable architects *must* of necessity belong, a society that would take a bold position, and define what *is* an architect and what is a quack; one that, by its published *dicta*, would enable the uninitiated public to know how we architects ourselves wish to be treated; we have here and there a learned society, devoting itself to the pursuit, or rather contemplation, of the fine-art architecture, with the sciences in connection with it—an object very laudable, it is true, but which is nevertheless so negatively professional as to be common to amateurs and architects alike.

What we want, sir, to remedy the evils "An Architect" deplores, is a professional society—in fact, an Institute of British Architects who should take cognizance of all such professional matters, and so busy itself with them as to become eventually the authority to appeal to, and of a consequence the society which every archi-

tect in the country would, in mere self-defence, be obliged to belong to.

One hears much now-a-days of "Lamps of Architecture," and it strikes me that there are in reality *three* of these; that is to say,—

1. The Lamp of the Art, which I humbly turn over to Mr. Ruskin to sub-divide into *seven*.

2. The Lamp of the Sciences, or -icks, -ings, -ometries, and -ologies, which every one who seeks to live by practising my first lamp ought to know something about.

3. The Lamp of the Profession; or, as one of your correspondents hath it, "The Lamp of making a living."—This lamp would enable us to know what are an architect's duties; what his (admitted) liabilities or responsibilities; what he may, and what he may not charge; how he may compete, and how he may not; what *is* "professional conduct," and what is not; with other such matters, now very mysterious, as you, Mr. *Builder*, have lately shown some of them to be.

As to competition itself, some architects profess to ignore it, sanctioned though it is by the custom of centuries, nay, thousands of years. It is in itself (properly used, not abused) an excellent thing; and, good or bad, is moreover what the *Times* said of Free-trade, "a great fact," which no architect can safely ignore, but *must deal with*—not for the sake of the present generation of architects, who, as a body, are quite indisposed to reform it, but for the sake of the younger members of the profession. Once let architects combine, not against public committees, but against whatever they themselves generally can agree in considering malpractice amongst their own fraternity; and depend upon it, sir, competition committees will aid them in establishing a fair system of competition. If any one doubts it, I need only refer him to the actual conduct of public committees. Some years ago, two minor societies drew up and published a set of rules or suggestions for the conducting of architectural competitions, and laid them before the architects of the country. These, with a few honourable exceptions, threw *uncommonly* cold water upon the attempted movement, and manifested in the most unmistakeable manner their perfect satisfaction (as a body) with the system as it stood *and stands*. By great exertion, a committee was certainly formed in London. It sat upon the question, and then expired of sheer apathy. In this "movement" public committees had never been appealed to at all, and yet, in one or two important competitions that occurred about the time, the very code of regulations of one or both of these two societies, having been published in the *Builder*, found its way spontaneously into "the instructions to architects," issued on the occasion adverted to.

Let no man complain of committees, or dream for an instant of "fair competition," till architects themselves take steps to create it. It is for the present a mere higgledy-piggledy scramble in which the sharpest practitioner carries off the prize and laughs at the hindmost. Take an example, by no means overdrawn.

A, B, and C (architects three) see a competition advertised in the *Builder:* A, by dint of hard struggling (as a competitor) has grown into gray hairs and good practice, so *he* votes competition decidedly a low thing, which he never engages in. B belongs to "the Institute," and C to the Architectural Association; but, paltry as is the prize, and injurious as are the terms of the competition in question, there is no law to prevent B and none to deter C from engaging in it. So to work go B and C to compete for the prize. B, on immense sheets of paper, like a wise man, gets up as attractive a design as he can, and has it tinted—*very* polychromatically—"by a first-rate artist." Like a wise man, he mounts, he frames, he glazes it; and not content with wisdom, proceeds to cunning, tacks to one corner an impossibly low estimate, and to another a conspicuous legend—"*If this design is accepted, a Roman cement portico will be presented by the author*," and flatters himself he has done a capital thing—*very*. A fortnight elapses, at the end of which he learns that the lucky architect of the building-to-be is his friend C, who—sly dog—had, the night before the adjudication, contrived to secure the votes of the whole committee at a grand champagne supper, given at that talented gentleman's expense at the Pig and Tinder-box hotel. Respectable A! Most unfortunate B!! Wide-awake, comic, coup-d'état ical C!!!

It is due to the two learned societies I have invoked to add that my heroes at least are imaginary. As to the incidents, I have no explanation to offer, but simply a question to ask, who is to denounce *poor* B, or to excommunicate C?

W. Y.

FREEHOLD LAND AND BUILDING SOCIETIES.

WHEN the Act 6 & 7 Wm. IV. was passed, it never could have been contemplated by the Legislature or Government that its influence should be so extensive, or its results so rapid as the existing generation has found them. In England, 265 societies represent a capital of over fifty millions, and a rental of nearly six millions; few great towns being without one or more; the rural districts numbering many, while every week adds to their numbers.

At first they dealt only with land, but now building societies and savings or deposit banks are generally included under the same management, and having the advantage of *immunity from partnership risks*, the combination of these objects enables them to realize capital with greater facility, as by lending money at 5 per cent. and taking it in at 4 per cent. (some few of them allowing less, and charging more), the profits are great, and the security certain.

The interest being more than that given by savings banks, insures a preference from depositors who hoard small savings: besides that, the economy of management, which is now reduced to a system, leaves the creditor perfectly at ease both as to the increase and security of his fund. The number of accounts in some is immense, but the principle of management most simple; it is, in fact, not very dissimilar to that of insurance offices; differing in this, that the profits do not go to a select proprietary—the whole association of contributors benefitting by the increase.

Before the Act of Wm. IV. a poor man might as well strive for a seat in St. Stephen's, as for a vote as an elector: small freeholds were not then to be obtained: now the danger is, that notwithstanding the enormous rise in the value and cost of freehold land, the county will be too much morselled out in pitiful and beggarly tenements, affording little advantage to the agricultural population in the provinces, and wholly dislocating the inhabitants of towns when drafted to a wide distance from their occupations and habitudes. In London and the great towns the effect will be very different: necessitated to locate at high rents, the operative who can make the sacrifice of 2s. a week, may have a chance of a tenement: in any case, he has a certitude of his deposit or subscription-money, with interest.

As yet, however, no attempt has been made to establish many freeholds in one house, as in Scotland: there a single flat or story has one or more *distinct freeholds*—freeholds in air if you like, but not *in nubibus:* these are not as *Chateaux duns l'Espagne*, but real tangible and heritable property, insurable from fire, and transferable as any other real estate. The enormous and exaggerated rents of small apartments (the smaller always the dearer), imperiously require redress. The poor cry out—no, *they* bear it patiently, and are for the most part unconscious of the infliction unjustly bearing on them; but their sympathisers complain, and are beginning to stir themselves on their behalf.

Already the demolition and continuous abatement of old slums, the fastnesses of labour and poverty, have scattered and removed the working classes much too far from the sphere of their duties. It is not votes for M.P.'s, nor the cant of elective freedom, that such beings and their families require, but healthy and humanised habitations: so, even for the orders one or two grades higher, freeholds to abide for ever are far less essential than moderated rents and *extended tenures*.

The tendency of terms on lease has been to grow shorter, by ten years, every ten years of the instant century. From 500 years, a century back, they dwindled to 100, A.D. 1800, and so on, decennially, by tens, to sixty years, or even lower at the *present* time.

Should no other benefits be derived from the rage for freehold tenures, the extension of leases to such periods as might warrant the outlay for new and solid structures, may turn out to be advantageous to the landlord as it must be to the building tenant.

As in all institutions and systems there are good and bad, so in Building and Freehold Land Societies there are better and worse: example and practice have much improved them; and it is certain that if honestly administered, the blessings they confer are inconceivable as they were unanticipated: the danger lies in reckless extension and purchase at distances too remote. These matters, too, may be overdone, and the unfinished and halting condition of incongruous architectural conceptions, as seen on most sides of London, denotes the necessity for caution in progress.

QUONDAM.

CHURCH BUILDING NEWS.

Somerleyton.—The chancel of the parish church here, has been recently taken down. It is about to be re-erected at the sole expense of Mr. S. M. Peto, M.P. whose warm-hearted liberality is confined by no distinctions of sect or party.

Lowestoft.—The district church of St. John, South Lowestoft, is approaching completion. The building is cruciform, and on the eastern side of the south transept, stands a tower of very fine proportions. A porch is placed at the lower end of the south side, and the west and east windows are also very striking. The pitch of the roofs is high and sharp. The church, which has been erected from the designs of Mr. J. L. Clemence, will be surmounted by a spire; "and we doubt not," says the *Norwich Mercury*, "that this tapering heaven-directed index, will indicate far and near that amid the many important works dedicated to commerce, and buildings raised for the enjoyments and elegancies of life, the house of God has neither been neglected nor forgotten by those who first conceived the idea of creating the extensive establishments now fast covering the large area of Lowestoft New Town."

Kent Town, Hampton Court.—On 17th ult. the first stone of the new church, at Kent Town, was laid by Mr. Timothy Healey, of Manor-park, Hampton. The church is situated on the highest spot in the parish, and within a quarter of a mile from the railway station. It is being built in the Early Decorated style. The walls are to be faced with Kentish Rag stone, and Bath stone dressings. The internal piers are intended to be of polished red granite, with moulded arches, &c. A number of villas have been lately erected, and the want of good church accommodation has been very much felt. Mr. J. E. Burland presented the silver trowel. Messrs. Salter and Laforest, of Adelphi, are the architects.

Chessington.—The church of Chessington, Surrey, was re-opened by the vicar, the Rev. W. C. Stapylton, on 20th ult. having undergone a complete restoration, under the superintendence of Mr. Robert Hesketh. It had been choked with pews of every variety of deformity, and the walls bulging with loose plaster and white-wash, and the interior was lighted by square wooden-framed windows. These windows have now been filled up, and the Early English arches and windows which have been discovered, have been restored to their original purpose. Some of these are curious; the pointed arch with the circular splay, the depressed heading, the oak lintel, the hagioscope, and the low side window—all simple in design, but probably coeval with the building of the church, and well preserved under the plaster. The high pews have been replaced by oak open seats, of the original pattern, of which one is still retained; while an old roof of chestnut has been exposed to view by the removal of the ceiling. A few new windows, of a design to accord with the old, have been added near the west end: a chancel-arch has been built, the font restored, and a vestry added. Much additional accommodation has been obtained by lengthening the church at the

west end. The exterior has been improved, by the substitution of undressed flint for the old green-stained peeling plaster; and a shingle spire has taken the place of a very mean belfry that lately bestrode the roof.

Newhaven.—On Thursday in last week the foundation stone of the extension of the church in this parish was laid by the bishop of the diocese (Chichester). The extension comprises the addition of a wing on the south side, affording accommodation to the extent of 200 increased seats. The original building is to undergo great improvements. New flooring is to be laid down, and it is to be entirely new seated. The windows which are at present of a very unpretending and varied character are to be replaced by others in the Early English style with Bath freestone dressings, which will impart to the structure a character of uniformity it at present is far from possessing. The roof of the new part is to be open with wrought and stained timber. The design is by Messrs. Habershon, architects. The builder is Mr. B. Constable, of Tonbridge.

Llandaff.—The foundation stone of the new church at Canton in this parish was laid on Monday in last week by the bishop of the diocese. Mr. Seddon is the architect. The church will be in the Geometrical Decorated style of architecture, and consists of a nave, with north and south aisles, under lean-to roofs extending eastward so as to embrace the tower, which will be situated between the nave and chancel, and will be surmounted by a spire. Further eastward, beyond the tower, will be the chancel with a sacristy. The nave will be divided on either side from the aisles by an arcade of four bays, having a clerestory above, lighted with circular foliated windows. The roof will be of stained Memel, simple in form, with a boarded ceiling over. There will be an entrance doorway in the western end, with a large five-light window with geometrical tracery above, also a doorway and porch to both the north and south aisles. A portion only of the whole structure is intended to be erected immediately, viz. the nave, with the arcades temporarily filled in with brick partitions, and windows, together with the concrete foundation for the tower. The estimated cost of the nave (exclusive of fittings) is 1,100*l.*; and if the two side aisles (cost about 800*l.*) could be erected simultaneously, a saving of more than 50*l.* would be effected, and accommodation afforded to 500 instead of 220. The funds in hand amount only to 939*l.*

Rugby.—On Thursday, the 20th of April, the new church of the Holy Trinity, Rugby, was consecrated by the Lord Bishop of Worcester. The church has been two years in erecting, is of a cruciform plan, with a central tower 100 feet high and 29 feet square, having a nave and side aisles, north and south transepts, north and south chapels, and chancel and vestry. The nave in the clear of the walls is 62 feet long by 24 feet wide; north and south aisles each 62 feet by 13 feet wide: the transepts are 24 feet square: the south chapel, which is devoted to children, is 17 feet by 13 feet, and on the north side there is also a chapel for children, 13 feet square, with a vestry-room 13 feet by 11 feet, over which the organ is placed: the chancel is in the clear of the walls 36 feet long by 24 feet wide. The exterior of the church is built with the Wingerworth Wall stone, from Derbyshire, and Bath stone dressings. In the interior, the clustered columns supporting the tower are executed in Derbyshire stone, whilst the nave columns and arcading, with the rest of the stone dressings, are of Bath stone. The carving is by Mr. Irving, of Leicester. The nave and transept roofs are decorated in colour by Mr. F. Winks, of Leicester. The gas standards were made by Mr. E. Edmunds, of Rugby. The chancel is laid with Minton's encaustic tiles. There are two stained-glass windows, the work of Mr. Holland, of Warwick. The roofs are all level and open, being of deal, stained and varnished. The height, from the nave-floor to the ridge, is 50 feet. It is intended to have a spire 120 feet high, but for want of funds that is omitted at present. Mr. Scott was the architect; Mr. G. Clark, the clerk of works; the contractor, Mr. John Heritage, of Warwick. The church is fitted with open seats, deal, stained and varnished, and will accommodate 957 persons, of which upwards of 500 are free and unappropriated. The cost was about 6,000*l.*

Huntingdon.—At St. Mary's, Huntingdon, two stained-glass windows have recently been placed in the chancel, the one representing St. Matthew, and the other St. John. These have been presented by Mr. Gerald Veasey, a young amateur in the art. An oriel window of a similar kind, to take the place of the present one at the altar, has also been ordered, by Mr. David Veasey.

Godmanchester.—The repewing and renovation of the church here are now finished. The western arch has been thrown open, and the lower part of the belfry taken in. The organ has been removed to the side—the place it formerly occupied. In the western tower, two stained-glass windows have been placed,—one by the representatives of Mr. Edward Martin—subject, the aged Simeon taking our Saviour in his arms in the Temple; the other by Mr. Robert Beart—subject, Christ blessing little children. Both of these are the workmanship of Mr. Constable, of Cambridge.

Royton (Manchester).—St. Paul's Church, Royton, having been considerably enlarged and beautified, and a new organ erected therein, was reopened on Sunday week. By means of this enlargement, 240 additional sittings have been obtained.

Ideridgehay.—The chief stone of the new church at Ideridgehay, near Wirksworth, Derbyshire, dedicated to St. James, for the benefit of Ideridgehay and Treton, Treton Wood, part of Ashleyhay, and part of Shottle, was laid on 20th ult. by Mr. Robert Cresswell, to whose munificent donation and that of Mr. James Milnes (who has also furnished the stone free of cost from his own quarry), the inhabitants of this neighbourhood, at present residing at a distance of several miles from their parish church, are mainly indebted for this provision for their spiritual necessities. The site is upon a rising ground nearly in the centre of the villages mentioned, and commands an extensive prospect over a picturesque tract of country. The style is the Decorated. Mr. Henry J. Stevens is the architect, and Mr. E. Robinson, of Belper, the builder. The contract is 1,800*l.* and the vaults and heating apparatus will entail an additional expense of about 200*l.*

Dalkeith.—The old parish church of Dalkeith, near Edinburgh, which has recently been renovated, was opened for public worship on 16th ult. This ancient edifice has been transformed. The original walls, which were of great thickness and strength, have been retained, but renovated in the same way as St. Giles', Edinburgh, the style of architecture in the new building being a copy of the old. The former tower, which was put up about ninety years ago, on the plainest and most economical principles, has been supplanted by a spire. The church is without galleries; but, the Buccleuch Church, so long unopened, has recently been converted into a parish church, *quoad sacra*, under the name of the west church.

Greenock.—A new free church has been erected in Lynedock-street, facing Well-park. It is in the Middle Pointed style. The plan is cruciform, and consists of nave and transepts, with large tower and spire at west end, and vestries and presbytery rooms at east end. The tower is supported at the angles with buttresses, and divided into three stages. The spire is in course of erection. The whole height of the steeple is to be 170 feet. The whole masonry was contracted for by Mr. J. Mackinnon, of Helensburgh. The staircases are covered with slated pyramidal roofs; the slate-work by Mr. Thomas Anderson. Each transept is lighted with a large five-light window, filled in with tracery; the glazing supplied by Messrs. John Cairney and Co. of Glasgow. The roof of the church is open to the ridge, and is formed and supported on arched principals, springing from shafts with moulded caps and bases, and resting on carved stone corbels. These principals are formed of a number of separate pieces of Baltic timber about an inch thick, bound together by strong iron bolts, in the aggregate forming a laminated beam of about 13 inches deep. The joiners' work was executed by Messrs. Kemp, Murray, and Nicholson, of Stirling. The pews are all of deal, varnished, and without doors. The external dimensions of the church are 121 feet long by 70 feet at the transepts; the interior dimensions 77 feet long by 38 feet 6 in. wide, and 48 feet high from floor to ridge, the transepts 27 feet wide by 13 feet deep, and 40 feet to the ridge: accommodation is provided for 1,100 worshippers. The church is supplied with three large "sunlights," constructed by the Messrs. Laidlaw, of Glasgow and Edinburgh. For heating the edifice, two stoves are constructed in the basement, each supplied by flues, which take either external air or air from the inside of the church at pleasure, so as to enable it to be heated more speedily before meeting, by the air being first drawn from it and impelled back again in the heated state. The plumbers' work has been executed by Messrs. Lochead and Munro, of Stirling; the plaster by Messrs. Foster and M'Intyre, and the painting by Mr. J. M'Naught, both of Greenock. The total contracts to complete the building are somewhere about 4,275*l.* Messrs. J. W. and J. Hay, of Liverpool, are the architects.

SCRAPS FROM IRELAND.

THE foundation-stone of the new church of St. Bridgid, Rolestown, near Swords, has been laid. The plan comprises a nave 65 feet in length by 28 feet in width, with chancel 20 feet by 20 feet. A porch at the northern side, and communicating with second bay of nave, forms the principal entrance, from its contiguity to the road. On south side of chancel is a sacristy, with private entrance thereto. A richly-carved altar and reredos, with sacrarium on epistle side, and founder's tomb on gospel side, are to be fitted up in chancel. The roofs are of equilateral pitch, with open timbers, stained and varnished. The east end of the chancel contains a triplet of lancet windows; and the sides throughout are lighted by single lancets. The west gable contains two lofty lancets, and a wheel window with tracery over them; the whole surmounted by a bell-cot for two bells. The style of architecture chosen is the Early Pointed Gothic of the thirteenth century. Mr. McCarthy, architect; Messrs. Doolin, builders.

A monastery and nunnery have been fitted up at Adare, county Limerick, by the Earl of Dunraven; also schools capable of containing 600 children. The church has been also rebuilt, from designs by Mr. Hardwick, of London. It was founded in 1230 by the Earl of Kildare. It consists of a nave, chancel, choir (crowned with old tower, which has a most venerable appearance), lady-chapel, and sacristy. Gothic arches of chiseled limestone separate choir from nave, chancel, and lady-chapel. The roof is highly pitched, with simple planed and chamfered timbers. The windows, doorways, niches, arches, &c. are of cut stone, as also all dressings. Gables are terminated by floriated crosses, and cut-stone buttresses are distributed throughout. The native marble, which receives a high polish, is used in the altars, steps, font, pulpit, piscina, &c. The lady-chapel altar has carvings, emblematical of the Annunciation, Assumption, and visit to St. Elizabeth; and the three-light window of same has foliated tracery. Hardman, of Birmingham, has decorated the chancel window with stained glass, at the expense of the parishioners, as a token of respect to Lord Dunraven; the subject being "The Adoration of the Magi," with an appropriate inscription. A statue of the Virgin resting on a porphyry base, is placed within the sanctuary.

The new Dominican church of Our Saviour is progressing rapidly. The style of architecture is Decorated Gothic. The plan comprehends the ordinary arrangements of nave, aisles, choir, and lateral chapels, with confessionals. At the north-west end will be a lofty tower, perforated with traceried windows at intervals; surmounted by an enriched parapet with crocketed pinnacles at angles, and terminated by a spire. In western extremity of nave is a deeply-recessed entrance doorway, with a six-light window, with tracery in the head. The main dimensions interiorly are 171 feet in length; width, 70 feet; and height to ceiling, 70 feet. We are told the entire cost of erection will be about 13,000*l.*

THE BASEMENTS IN LONDON.

A letter of mine some few months since on the subject of the cellars of London, which you inserted, produced some effect, and perhaps the result of my last two journeys under the beauty of metropolitan shops, which, like the eastern apple, are "bright to the eye but foul within," may, through your means, be productive of some steps to gain a clearance so much needed. I feel surprised something is not done to prevent the filth that is allowed to accumulate under the very nostrils of our enlightened citizens, the Commissioners of Sewers. We have frequent details of the dwellings of the poor being subject to the inspection of some sanitary officer, but I suppose the appearance of a goodly front prevents the idea that load upon load of pestiferous filth is allowed to remain under the very threshold of their gaudiness, and nothing but a scanty stalboard and a gaping floor separates them from it. Nevertheless, Sir, such are the facts, and if common decency will not induce its removal, use your powerful aid in urging on the proper authorities the necessity of a periodical removal of these cholera heaps under a severe and heavy pecuniary fine, and also subject to the inspection of the sanitary officers, as in the case of their poorer brethren.

My avocations have led me into numberless dwellings of all sorts and grades, and there are two circumstances that require some powerful co-operation to rectify and improve for the benefit and health of society at large. The one is that which I have brought under your notice, and the other is the ventilation of apartments in which are located at work fifteen to twenty young girls, many bearing the ravages of repeated headaches and being confined in rooms for twelve hours together scarcely 15 feet square. The better ventilation of such workrooms and shops is much needed.

Before I conclude, it will be some satisfaction for you to learn, and but justice for me to state, that one part of London, namely Holborn, has profited by your timely hint, and I had the pleasure of hearing that a large firm had been induced to remove eight cartloads of dirt, which has given the neighbours some desire for following in the same path.

A London Gas Inspector.

FIRST ANNUAL EXHIBITION OF THE FRENCH SCHOOL OF THE FINE ARTS IN LONDON.

Under the above designation, a gathering of pictures by some of the leading artists of France has been opened to the public at the Gallery formerly known as the Amateur Gallery, No. 121, Pall-mall. The collection comprises about 150 pictures of varied interest; some of them in the highest walks of art.

Horace Vernet, Paul Delaroche, and Ary-Scheffer stand at the head of this collection. The first is represented by the "Chasse au Mouflon"—a fine picture, combining much of the energy of the master and his brilliant colour. The "Death of the Duc de Guise, at Blois," by Paul Delaroche, lent for the purpose of Exhibition by his Royal Highness the Duc d'Aumale, is esteemed in France as a *chef-d'œuvre* of the painter, and is certainly a picture of great merit, but the subject is an unpleasant one. By the same artist there is also the small copy of his vast fresco in the Hemicycle of the Fine Arts School at Paris, made by his own hand for the purpose of engraving,—a work of the highest interest, containing the portraits in the costume of the period of upwards of seventy of the greatest artists of the Revival. Ary-Scheffer exhibits a picture he painted expressly to be placed here — a replica of the well-known "*Francesca da Rimini*." For intensity of expression, this work is scarcely surpassed, while the purity and elegance of the drawing make it worth study. Ary-Scheffer has also two other pictures of importance.

Perhaps the greatest attraction of the Gallery will be considered by the public generally to be the cattle pictures by Mdlle. Rosa Bonheur. As the productions of a lady, they are perfectly astonishing. A poetic idea pervades these humble subjects, with a solidity of colour and atmospheric gradation which are very remarkable. The collection has also a considerable display of small conversation scenes, forming a remarkable feature of the school, usually distinguished by elegant drawing and great attention to costume and accessories. The specimens by Plassan are admirable in this respect. Of marine and landscape subjects, Gudin and Mozin contribute meritorious works; and in landscape, Jules Dupré, Auguste Bonheur, Thuillier, and some others, indicate that the modern French school is making advances in the right path, and will before long enter into rivalry with our own artists.

About a dozen of the pictures have been sold.

ROYAL INSTITUTE OF THE ARCHITECTS OF IRELAND.

At a general meeting of the institute, held April 22, Mr. Jacob Owen, V.P. in the chair, the secretaries read a correspondence with Colonel A. Maclachlan, chief inspector of the Revenue Police Force, with reference to the imputation contained in an article in the *Civil Service Gazette*, in which it was stated that a candidate for a lieutenantship in that force had been objected to as not being a gentleman, on the ground of his having served an apprenticeship to an architect, which closed with the following communication from Colonel Maclachlan:—

"In reply to your letter of the 11th instant, I have the honour to inform you, that the reason assigned in the article alluded to in the *Civil Service Gazette* for the rejection of Mr. Irwin, viz that he had been apprenticed to an architect, is incorrect."

The ballot was opened, and Mr. George Godwin was elected an honorary and corresponding member of the institute, and Mr. M'Curdy was transferred from the class of members to that of fellows.

Mr. J. J. Lyons read a paper on the "Influence of Education on the Fine Arts, especially that of Architecture," after which some observations were made by Messrs. Neville, Papworth, Owen, and Montgomery, dwelling upon the necessity of an educational system of training being adopted, and a competent tribunal, authorized either to admit or reject candidates at discretion, after a careful examination. It was resolved that the secretaries should communicate with kindred institutions, soliciting their co-operation in a grand move with this end in view.

THE SPACE AROUND ST. PAUL'S CATHEDRAL.

A special general meeting of the Institute of Architects was held on Tuesday, April 25th, Mr. T. H. Wyatt, V.P. in the chair, to consider the propriety of aiding the endeavours now being made to keep open the ground at the end of New Cannon-street. After various statements had been made, the following resolutions were passed unanimously:—

"That it is the opinion of this meeting that the open space which has recently been made at the south-eastern angle of St. Paul's-churchyard, by the removal of several houses, should in future remain uncovered by buildings, inasmuch as it presents a highly interesting view of the metropolitan cathedral of St. Paul, and forms a striking approach thereto from the important improvement of New Cannon-street."

"That it further appears to this meeting that if the space referred to were preserved from being built upon it would afford a most appropriate site for a statue of our most eminent English architect, Sir Christopher Wren, in immediate contiguity with an edifice which must be considered as one of the noblest triumphs of science and art, alike honourable to himself and to his profession, as well as one of the principal ornaments of this great metropolis."

A committee was then appointed to take such steps as may seem to them most expedient for carrying these resolutions into effect, and in the first instance to wait upon the Improvement Committee of the City of London to request their sanction and assistance towards attaining the objects of the meeting.

An intermediate ordinary general meeting will be held on Monday evening next, the 8th instant, when a paper will be read "On our Open Spaces," by Mr. Samuel Angell, Fellow.

INQUIRY INTO ACCIDENTS AND DANGEROUS TRADES.

A very important subject of investigation has been started by the Council of the Society of Arts, to which we wish to draw attention.

For some time we have ourselves occasionally made endeavours to introduce the adoption of safeguards against the occurrence of diseases in the building trades, such as those of the lungs of masons, plasterers, painters, &c. from dust; and against the occurrence of accidents, as to builders, from insufficient scaffolding or ladders, scamping and toppling workmanship, &c These are particular instances of the general subject of inquiry to which the Society of Arts are turning attention. The council have printed a report on the subject by an "Industrial Pathology Committee," whom they had appointed to consider as to the best mode of procedure, to which report are appended memoranda, containing questions addressed to persons conversant with cases of injury, accident, &c. in many different occupations; and to these are added a circular requesting co-operation towards the object in view, which also comprises an exhibition of inventions and appliances of all kinds for making handicraft employment more healthy. The first subject in particular to which the council and their committee have drawn attention relates to cases of injury to the eyes, occasioned by industrial occupations; but the variety of accidents and injuries, diseases, &c. to which the working classes are subject is very great, as appears from the list appended to the circular referred to.

The council of the Society of Arts have our best wishes for their success in the useful object which they have in view.

A petition, by the way, is at this moment before the House of Commons from miners complaining of the recklessness of their employers in respect of the causes of frequent explosion, earth-falls, &c. in mines. It has always been understood that such accidents as those from explosion in almost every case arose from the reckless disregard of precautionary regulations on the part of the operative miners themselves, but we hope that a searching inquiry will be made into the totally different view which seems to be taken by the operative miners, who attribute these explosions to want of sufficient ventilation by shafts, &c. and earth-falls, to want of adequate timber or other supports. If such a subject of inquiry could be extended to other handicraft employments, especially as regards ventilation, adequacy of supports (as in scaffolding, for instance) or defences, as in machinery, &c. &c. it would be well, and would greatly strengthen the hands of the council of the Society of Arts in their co-ordinate and cognate inquiry.

THE CHURCH OF BORGERHOUT, NEAR ANTWERP.

The London public will of course like to know what is doing by the architects of Belgium, so here we give a view of the new parish church of Borgerhout, a faubourg of Antwerp, which is remarkable as the first religious building of any importance which has been erected in Belgium, in the present century, in the polychrome Gothic style. It was designed and executed by M. Berckmans, architect. The first stone was laid on the 3rd of June, 1841, and a medal, commemorative of the event, was struck and distributed on that day. It was finished in 1846. In plan, it is a Latin cross, about 145 feet long: the width of the transepts is about 65 feet. The height of the nave is about 55 feet. The nave has aisles, separated by columns and arches. There is a gallery at the (west) end of the nave for an organ.

In the front a contrast of colour is obtained by the use of bricks and white stone. The tower is of stone from the clock up to the foot of the spire. The spire is covered with copper, polished and varnished with caoutchouch, and the ribs are gilt. The whole height of it is about 145 feet.

Thames Tunnel.—In the week ending 29th of April, 20,133 passengers passed through the tunnel, and paid 83*l.* 17*s.* 9*d.*

CHURCH OF BORGERHOUT, NEAR ANTWERP.——M. Berckmans, Architect.

PROVINCIAL NEWS.

Norwich.—A site for a free public library, on the west side of the museum, has been purchased. The city surveyor, according to the local *Chronicle*, will immediately receive instructions to prepare plans. The new building will probably include lecture, concert, and assembly rooms on the ground-floor, rooms for the free library and reading on the first story, and also accommodation for various societies in the city. Such a building has been much wanted for a long time, for educational and other purposes.

Louth.—A discovery has been made near Louth Park Abbey House of fragments of the walls of the old abbey, the ancient domicile of the Cistercian Monks, who flourished there three centuries ago. They consist of what was apparently a cellar-room underground: it is a square room of 15 feet each way, and 6 feet deep, the excavators not having yet bared the floor. The walls are built of a remarkably white soft stone (whiter than Caen), interspersed with smaller pieces of a brown stone, and the interstices filled up with very thin red flat bricks or tiles. In the north-west corner of the room was a column, reaching apparently to the top of the room (the upper part was mutilated by the tools of the labourers). About 4 feet of it remains, and so much of the pedestal as has been bared appears to have been elaborately carved. On the east side of the room was a doorway. Among the rubbish and soil which had filled up the room were found some human bones. Some coins have also been found.

Yarmouth.—At a recent meeting of the local Board of Health, the clerk laid before the board the report of Mr. Austin from the General Board, sanctioning the borrowing of 3,000*l.* for drainage purposes, namely, 2,400*l.* for the construction of works, and 600*l.* for a plan and survey of the town.——The new bridge is rapidly progressing to completion. It consists of three arches, the centre being 50 feet span, and the two side ones 65 feet each, supported on two stone piers 12 feet wide each.

Ramsey.—The drainage works in this town are at length commenced. Workmen are constructing, on each side of the present culvert, through the "Great White," one curvilinear, equal to 6 feet in diameter, designed to give relief to the centre in the times of great floods, and afford a perfect drainage; all main and house drains being diverted into and connected with them. The three tunnels will be heavily loaded by earth-work, and the whole street from the wharf brought to a uniform level. These and other works connected with the clearing of sullage are being executed by Messrs. Coker and Oakes, of Swaffham, contractors, under the direction of Mr. George Allen, of St. Ives, surveyor.

Hawksworth.—The foundation stone for new national schools at Hawksworth, Notts, was laid on 4th inst. The schools are to be built of brick, with Ancaster stone dressings. The architect is Mr. Chas. Baily, of Newark, and the builder is Mr. Jas. Henderson, of same place.

Sedgeley.—A new freehold land society has been formed here, embodying a *sanitary* society, the directors reserving to themselves power to superintend the erection of the dwellings, so as to preserve the district from the infliction of evils.

Pensnett.—New schools for St. Mark's Church are about being erected, to accommodate 200 girls, 200 boys, and 100 infants, with master's residence, &c. Plans were obtained by the committee from Mr. Wigginton and Mr. Stride,—the adjudication taking place immediately. Lord Ward has given two acres of land for the purpose in a commanding spot, and near the church.

Dudley. — The Lodging-House Committee have arranged for a public meeting at Dudley, on the 30th of May next, Lord Ward presiding.

Cobridge.—For behoof of the workmen employed by the Shelton Colliery Company, and the Shelton Bar-iron Company, at Cobridge, in the Staffordshire Potteries, Earl Granville has recently erected a number of neat houses. To these, schools have been attached, and their opening took place on Monday in last week. The schools are of the Elizabethan style, designed by Mr. J. M. Dodd, of London, and erected by Messrs. Bryan, of Stoke. The buildings consist of an infant school, 30 feet by 15 feet, and two class-rooms, 15 feet by 15 feet; boys' school, 35 feet by 17½ feet, with class-rooms; and girls' schools similar. The building is of the best red brick, with stone facings, and the inner walls are lined with Ridgway and Bale's patent glazed and coloured hollow bricks. The building is warmed by Perkins's patent hot-air apparatus. Extensive play-grounds, covered and open, are adjoining, and the whole will be surrounded with an ornamental palisading.

Shrewsbury.—During the past twelve months, says the *Shrewsbury Chronicle*, there has been perhaps as much improvement visible in the shops of Shrewsbury as in any other town in the provinces. The design of one of these, for the display of fashionable mercery, is by Mr. Randal, of this town, architect, under whose personal superintendence the works have been executed. The general contractor was Mr. Treasure, of Newport; the painting, glazing, and plumbing being done by Mr. W. Pugh, of this town, who also supplied the plate-glass. The decorative carved work was executed by Messrs. George Jackson and Son; the brass-work by Messrs. Bennett and Co.; and the ornamental ironwork by Messrs. Cottam and Hallen, all of London. The Coalbrookdale Company and Mr. Edwards, of Wellington, also did part of the ironwork; and the gas-fittings were executed by Mrs. Alltree, of Shrewsbury. The shop is 43 feet by 28 feet, and 11 feet 6 inches high; the roof supported by fancy figures in plaster. The back portion is of the height of two floors, being lighted by a glass ceiling of three panels of ground plate-glass, 25 feet from the shop floor. A staircase from the shop gives access to the gallery, which consists of a four-sided arcade, one of the sides being open to the show-room. The end above the back of the shop on this floor has four arches, filled with silvered plates, 8 feet by 3 feet 6 inches. The top end of the shop below has 5 arches, also filled with silvered plates the same width as those above, and 9 feet 6 inches high. In the inside of the front windows are two silvered plates, each 10 feet by 5 feet 6 inches. The glass in these windows consists of two plates of 10 feet by 6 feet, and four of 10 feet by 4 feet. The whole shop is lighted by seven six-light chandeliers, manufactured by Messrs. F. and C. Osler, of Birmingham. The corporation and Street Act Committee ought to make an effort to have all the footpaths flagged, as they now, it appears, are in a shameful condition.

Swansea.—We understand that the Water and Sewers Committee of the Local Board of Health have appointed Mr. R. Rawlinson engineer-in-chief for the water supply and drainage of this town.

Levenshulme.—The *Manchester Courier* states that the first stone of a building intended for a school, and also for Divine worship, in connection with the Established Church, was laid by Mrs. Bradshaw, of Manchester, on Saturday before last, in this village. The building will be of brick, 48 feet by 28 feet, of one story, with an open roof, and capable of accommodating 200 persons, either adults or children. The architect is Mr. Alfred Fisher; and the contractor, Mr. Davison, of Manchester.

Liverpool.—The outworks, railings, &c. connected with St. George's Hall, are being put into shape. The stone palisading between St. John's Church and the grand entrance opposite Lime-street is now complete. The exterior wall from the corner of St. John's-lane into Lime-street, as far as the entrance opposite Lord Nelson-street, is also now topped by the stone palisading, and the works at the east corner are rapidly progressing.——The new washhouses in Frederick-street, built on the site of the baths and washhouses erected some years ago, were opened to the public on Monday in last week, and were inspected by great numbers of people. The building consists of two stories. On the ground floor there are thirty stalls. Each person is provided with a separate inclosed compartment or stall, fitted up with every convenience, including two wash-tubs, and, where necessary, one dolly-tub. The same description of stalls are provided on the second floor, which are in number twenty-three. The hydro-extractors (as substitutes for wringing-machines) are mortised on the first as well as on the second floor. The heated drying-rooms are also above; and below, on the ground floor one portion of the building has been set apart for a compartment for infected clothes, with separate entrance and drying-room. The building was planned by Mr. Newlands, the borough engineer; and the machinery is by Mr. Swallow, whose patent horizontal engine drives it.——The opening of the new suburban hotel at Garston took place on Friday last. The style is Italian, or early Roman, and the material is a blueish cast of stone called Huyton-rag, finished with Stourton stone. The principal entrance is by a three-arched porch, flush with the building. The floor is tesselated. The bar, which is circular in form, is opposite the door, and is one of the chief attractions in the building. A principal object of the architect has been to give easy access to the various rooms and bar parlours on the first floor, and this has been accomplished by the form of the hall. Access to the upper rooms is by an unusually spacious staircase, on the left of the entrance. The steps are of polished stone. The landing is of the same dimensions as the hall.——Hooton Hall is undergoing extensive alterations at the hands of the Messrs. Holme, and under the superintendence of Mr. Collins, of London, architect. It is being enlarged,—a conservatory added, and the chapel is being adorned with a tower, while the entire building is being decorated, or renewed externally. It is in the modern Italian style. At a recent marriage festivity here, photographs of the hall, in its animated state, were taken by a Liverpool photographer, and prints of the photographs are now being issued.

Edinburgh.—A committee has been appointed, including the provosts of all the Scottish burghs, in order to promote subscriptions for a monument to the late Professor Wilson.——The statue to George Heriot, subscribed for among "Auld Callants" [old boys] who have enjoyed the benefit of his bounty as hospitallers, is about to be elevated to its allotted niche in the Scott monument.

Greenock.—New schools, in connection with the Free Church, elsewhere described, have been erected in St. Andrew's-square, from a design by Messrs. Hay, of Liverpool, in the Gothic style. The building contains one large hall, 53 feet by 26, so constructed as to be divided at pleasure into two school-rooms by means of a telescope partition, respectively about 36 by 26 and 17 by 26, and an apartment, about 11 or 12 feet square, appropriated to the teacher. The uses to which the building is to be appropriated are—as a mission station on Sunday, during the day, and for Sabbath schools in the evening, and a day school throughout the week.

SACRED ARCHITECTURE FROM THE FOURTH TO THE TENTH CENTURY.

A HISTORY of sacred architecture from the fourth to the tenth century, as shown in the churches of Geneva, Lausanne, &c. has been published by Mr. Blavignac.* The *Literary Gazette* says:—

"The first portion is devoted to the Gallo-Latin school, ranging from the fourth to the end of the sixth century. In this period the greater part of the Christian edifices were built of wood. Nevertheless, side by side with such structures were others in solid masonry, and the remains of these indicate that their decorations may be traced from the Græco-Roman school, and especially from the edifices in wood, which appear to have been carried to a considerable degree of ornamental perfection. The assemblage of many-coloured paintings constituted a radical element in the decoration of the primitive school.

The second division our author terms the primary sacerdotal period, extending from the sixth to the ninth century. This designation is applied to it from the fact of the ecclesiastics

* "Histoire d'Architecture Sacrée, du IV. au X. Siècle, dans les anciens Evêchés de Genève, Lausanne, et Sion." Par J. D. Blavignac. 2 vols. 8vo. and Atlas of Eighty-two Plates.

having presided at the erection of these edifices. The most remarkable monument of this school is the church of Romainmotier, erected in the seventh century, and consecrated in 753. The edifice is yet almost in its original state, and is a most interesting example of the order of St. Columba. Important remains of architecture of the same school may be seen at St. Sulpice, at Bretonnieres, and other localities.

The third division, namely, the Carlovingian school, comprehends the ninth and the commencement of the tenth century. The principal characteristics are the development of polychromy, the presence of cupolæ in the centre of the cross, and polygonal bell towers. The church of Grandson, constructed at this period, is a monument of the greatest interest to the architectural antiquary."

The fourth division our author designates the secondary sacerdotal school of the tenth century. The cathedral of Geneva, and the church of Mont Valéria à Sion, although differing from each other, belong to the same school. Nearly on the line of demarcation which separates the two styles we find the royal abbey of Payerne, erected at the end of the Rudolphian dynasty, in which we discover a combination of the Rhodanique and the Italian style.

ON THE ARRANGEMENT AND DECORATION OF CAST-IRON AS APPLIED TO BUILDINGS.

CAST-IRON is a material that is being used more and more extensively every day by the architect and engineer. It has by many, and with but too much truth, been called treacherous, and whilst the truth of this assertion is acknowledged, it becomes the duty of the architect to ascertain the laws by which its treachery may be overcome and made really useful to his purposes. The many lamentable failures of this material ought to act only as a stimulus to renewed exertions to endeavour to ascertain its properties, so that failures may not occur again. * * * Having attempted to state as briefly as possible the properties and principles of application of cast-iron to girders, I will call your attention to the question as to how far cast-iron girders may be constructed safely and economically, and also have an agreeable appearance to the eye. Whilst the utility of this material has been acknowledged by many, there have been but few attempts to treat it in an honest and truthful manner. Our girders are eyesores of such magnitude, that we case them over with other materials, and thus endeavour to give them an appearance of being what they really are not. Let us acknowledge them, and the time will come when they shall be no longer unsightly and a reproach to that art that has derived so much real service from their assistance. An attempt was made at this in the building for the Great Exhibition. The girders were there perforated, and assumed a lighter form than they had heretofore; and it is my wish, by calling your attention to this subject, to still further develop what we there saw. To express my meaning in as few words as possible, I ask, may not the same, or nearly the same, sectional area of girders be disposed in a manner more agreeable to the eye, without loss of strength, and with but a slight increase of expense? (The extra cost, I anticipate, would be chiefly in the moulds for the girders). To this question I answer that I think it may. I would form the whole superficial area of the web into ribbed or moulded panels, perforated in geometric or other forms.

The flanges I would mould in a bold manner, taking care that the object of the mouldings should be to give an agreeable form to those portions of the metal where the flanges and the web are united, and that is where the real strength is wanted. Stancheons, columns, &c. give even more opportunities of dealing architecturally with a material that has been treated in any but an architectural manner. In our shops, our warehouses, our railway stations, our theatres, nay, even in some of our sacred edifices, do we find these really useful members of the building. And how do we find them treated? In any but a truthful manner; sometimes painted to represent stone, and which material could not carry the weight under eight or ten times the sectional area; sometimes encased in silvered plate-glass, and often covered by a wooden shaft, capital, and base, all truly brought to the most orthodox proportions of Grecian or Roman architecture. In short, what with endeavouring to persuade us there are no supports, or that these are in other materials than those which only could be used, many have in using cast-iron strayed from the path of truth and sincerity, into a path which, if persevered in, must of necessity lead to the destruction of not only art, but honesty. And if it is asked why this should be so, I will answer that it is so much easier to copy what we have ready at hand than to design new forms adapted to the materials we use. We can take it as an axiom in architecture, that we cannot succeed in producing true art, if we endeavour to adapt materials to forms they cannot take, or duties they cannot perform; or as some one has pertly and truly said, that only is beautiful which is true. Having endeavoured to point out that which I think to be erroneous, I will now endeavour, as far as I am able, to suggest a remedy. In vertical supports, we have to prepare for two contingencies; the one the direct or crushing power, and the lateral thrust caused by the supports being thrown out of the perpendicular line, from deficient foundations, oscillations, unequal settlements, &c. &c. And it is but too often from the last-mentioned cause, that failures of columns, &c. take place: the weight being thrown unequally upon the column, will cause precisely the same effect to take place as shown before to happen to girders, overloaded. On the one side we shall have the metal crushed, and on the other the portions torn asunder. We find that the pyramidal form is best adapted for our purposes, for as the greatest amount of strength is required towards the lower part of the shaft, there then should be the greatest amount of metal; and I think, in dealing with the lower portion of the shaft, there is an opportunity for originality in design. I do not ask for a series of mouldings to form a base: they may be outside a building, with the play of light, and be all that could be desired; but with cast-iron used mostly for internal purposes, and with a small sectional area compared with stone, wood, or other materials, it is totally different. The base mouldings of a stone column, 2 feet in diameter, become truly contemptible when applied proportionally to an iron shaft 6 inches in diameter; therefore, as we have but a small amount of material to use, we must endeavour to use it in such a manner that while we lose nothing in strength, we gain all that can be gained by the form and grouping of the metal.

I have adopted the cross form of section for a stancheon, and have filled up the upper portion of the four angles by bold filletings that add vastly to its strength, and the eye is carried upward by the mouldings in the angle: the lower portions of these stancheons may be filled in with what I may perhaps be allowed to call spurs, and would be found useful in giving so much more additional strength, and would, when so designed, serve admirably as brackets to which gas branches might be attached, and I think you will allow these could be made to look much better than the present clumsy arrangement of putting a collar round the column and attaching the gas branch thereto. Having spoken of the base and shaft, I will proceed to the upper part or cap. In many instances these have to carry wood girders of large scantlings. The web or flanges of the stancheons may be carried up and elongated in the direction of the girder; when cross girders have their bearing also upon the same stancheon, then all the webs would be elongated, and I can conceive that in the hands of a skilful designer these supports could be made to take such forms as would please the eye and satisfy the mind, for we should see the floors that have to carry their ponderous weights upborne by a system of columns and girders really visibly applicable to the end in view, and artistic,—rendered artistic by having their utility covered with the forms of beauty, proving in themselves the union of those qualities which constitute true architecture; and this may be carried still further, and I will ask you to imagine, instead of the wood girders before mentioned, a system of flooring composed of perforated iron girders, designed as I have endeavoured to show they should be, cast with ornamented shoes or brackets to carry the binding or trimming joists; these girders then with their moulded soffits, their perforated panels, and their brackets all carried on supports having their mouldings carried upwards and terminated in the ornamental arms or elongations, such as I have, I am afraid, but too poorly sketched, and I ask you to imagine all this ironwork picked out in tints that would relieve the forms given to the material. Then I think you would have a floor and ceiling that might be compared with any boxed-up girders, with moulded soffits representing beams of stone, sometimes 20 or 30 feet long, carried on Corinthian columns; with *papier maché* capitals and wood shafts glued up in thicknesses: the one picture is truth, the other falsehood: the one is open to the day, and at all times can be examined in the event of anything going wrong; the other may be hiding a cause working slowly, but which will, nevertheless, surely bring destruction on the heads of all that are so unfortunate as to be underneath.

I have dwelt chiefly on stancheons, because I think the cross form of section far more adapted to ornamentation than the circular or columnar; however, as we saw in the building for the Great Exhibition, the section may be altered, and that with every advantage, in an æsthetic point of view, there are various outlines that may be given to these vertical supports. The caps and bases must depend upon the work the columns have to do. I would advise as great a breadth of base as possible, and when moulded, all undercut mouldings must be avoided, as they cause the destruction of the mould and give an appearance of weakness where we should endeavour to convey the idea of strength concentrated in the smallest possible amount of material.

In designing for this material, you should bear in mind the nature of the material, and the design should be of such a form that the metal may flow readily and quickly into all parts: thus conventional and geometric forms, closely worked, are easier cast than long flowing lines having no immediate connection with other portions of the design.

There is in art an onward movement; and all honour to those who are aiding the progress—a progress that has gone so far that it is time the architect was up and stirring, and determining in his own mind to love truth and beauty for their own sakes. Cast aside for ever falsehood and sham. It is the false position they have caused him to be placed in that has brought disgrace upon his truly noble profession. But this is not to be done in a moment, nor by a single effort: we must work hard, strive hard, and think hard, to regain the road that leads to truth and beauty.

JAMES ALFRED BUNKER.

NEW WATER-COLOUR SOCIETY.

AT the private view of this society's exhibition, on Saturday last, seventy-two pictures were sold, realizing more than 1,100*l.*—a tolerable indication of what the visitors thought of the collection. It consists of 367 works by the accustomed hands; and although less remarkable than on some previous occasions, contains many excellent pictures, especially in the landscape department. Mr. Bennett is very strong; Mr. Vacher has a charming Evening View of Venice (193); Mr. Rowbotham several very elegant drawings; and Mr. Aaron Penley two admirable lake scenes, 140 and 151. Especially, however, would we point out Mr. E. G. Warren's two excellent views (12) "View from the Wynd Cliff," and (319) "The Beauchamp Tower." Above the last is Mr. Haghe's contribution, a brilliant sketch, though small, called, "A Corps de Garde" (318). Mr. Henry Warren, the president, has a large and elaborate work, (216) "Soldiers exhibiting to an Abbess the Warrant for Suppression of her Convent," and Mr. Edward Corbould a rich piece of colour, wanting in expression, called "The Destruction of the Idols at Basle" (75). Mr. Mole's "View on the Coast" (10), deserves a place on the line. (44) "A Woodland Scene" (injured by the figures), (62) "Interior of Roslyn Chapel," by John Chase, Mr. Kearney's "Fatal Picture" (83), "Padua," by J. H. D'Egville, McKewan's "Fresh from the Moors" (124),

and "Stirling Castle" (224), Absolon's "Dance" (202), &c. all merit examination. "Picciola" (242), has cost Mr. Wehnert much time, but is not wholly satisfactory: the prisoner is not in the garden, but at the window.

THE FIRST PURCHASES BY PRIZE-HOLDERS IN THE ART-UNION OF LONDON.

THE following pictures have already been purchased by prizeholders:—

From the Royal Academy.

80*l.* The Trosachs, G. F. Buchanan; 70*l.* Harvesting, near Derwentwater, W. F. Witherington, R.A.; 50*l.* A Water-mill, W. F. Witherington, R.A.; 25*l.* The Kiss, G. Dukes; 40*l.* A Highland Valley, H. Jutsum; 20*l.* After a Butterfly, J. T. Peele; 20*l.* On the Moors of Arran, A. J. Lewis; 15*l.* A River Scene in March, J. Peel; 10*l.* A Summer Day, J. Mogford; and, we believe, Common Fare, by S. Cooper, A.

From the British Institution.

60*l.* Autumn in the Highlands, H. Jutsum; 40*l.* Isola dei Pescatori, G. E. Hering.

From the Society of British Artists.

40*l.* Landscape and Figures, near Caldecot Castle, W. W. Goling; 40*l.* The Thames, from the Green Meadows near Sonning, H. J. Boddington; 10*l.* 10*s.* Study of Donkeys, C. Richards.

From the National Institution.

80*l.* The Mid-day Rest, H. B. Willis; 60*l.* Gipsies leaving the Common, E. Williams, sen.; 60*l.* The Old Coach-road — Market Morning, E. C. Williams; 25*l.* Gipsy Encampment, E. C. Williams; 20*l.* Entrance to an English Village, G. A. Williams; 10*l.* Evening, E. Williams, sen.

From the Water-Colour Society.

60*l.* Bridge of St. Maurice, Geo. Fripp; 60*l.* View, looking over Menteith, Copley Fielding; 14*l.* 7*s.* Mountains at the Head of Loch Etive, Copley Fielding.

From the New Society of Painters in Water Colours.

12*l.* 12*s.* Near Dalmally, Geo. Fripp; 90*l.* Sedburgh Abbey, W. Bennett; 17*l.* 6*s.* Wait a Little Longer, H. C. Pidgeon; 18*l.* Ben Venue, seen over Loch Achray, T. L. Rowbotham.

THE METROPOLITAN COMMISSIONERS OF SEWERS.

SIR,—On March 29th, I wrote to the Commissioners, on behalf of my clients (Kilburn Park Estate), who had paid to the Commissioners their share of 400*l.* to have a portion of the 8 feet in diameter main sewer formed on this estate. I complained to the Commissioners that the bottom of the sewer, the invert, was put in 1 foot above the tributary sewers, branching off from the said main sewer, and which tributary sewers were put in about twelve months back, under the inspection and to the direction of their former clerk of works; and from a certificate, which I have of the surveyors for the estate, it appears that these tributary sewers were passed to the satisfaction of the Commissioners' engineer. On April 3rd, I received a letter from the Commissioners, informing me that my letter was referred to their engineer, and that the result of his report should be communicated to me. Not having received such result, I am compelled, in *self-defence*, from the language made use of in this neighbourhood, to my knowledge, by their clerk of works, to urge upon you to insert this note, with a view to obtain an immediate reply as to the correctness of my statement. The end of the sewer is sufficiently open for any person to judge for himself. I have for some time been in communication with the Commissioners and their officers, but now give it up as a hopeless case to obtain redress. They have no excuse to say that they were not informed of what might occur. B. LAY.

Miscellanea.

THE PLASTERERS' UNION.—We have received a letter from the secretary of the Plasterers' Trades Union, with reference to our recent article on plasterers, asking us to state, that the committee meet every Monday night (not Tuesday), and that the union is not "*political* and economical," but simply economical, "for," says the secretary, "politics are justly and properly excluded from being introduced at any meeting of the body; the whole attention of the members being directed to the improvement of themselves, individually and as a body, and assisting their fellow workmen when necessity of any nature requires their exertion or support." Applying the term "political" to the government of the *state*, the denial may be quite correct, but regarded as applying to administration and government in the abstract, the papers enclosed show that the word was not improperly used.

CARLISLE SCHOOL OF ART.—A general meeting of the subscribers to the projected School of Art in Carlisle was held in the Town-hall last week, when rules for the government of the institution were framed, a committee of management elected, and the new school thus set fairly afloat in connection with the Government Department of Practical Art.

THE ROYAL DUBLIN SOCIETY AND THE GOVERNMENT.—The Department of Science and Art have sent a long communication, signed Lyon Playfair, to the Royal Dublin Society, explaining the terms on which their lordships will recommend to Parliament the annual grant for the purposes of this society, and which will be increased in amount. The terms appear to comprise a completely new arrangement, in which much of the former exclusive power of the society over its funds is taken away, and centered in the Department of Science and Art, but by means of which the Dublin Society, its museum, and lectures, the Museum of Irish Industry, the Dublin Zoological Gardens, &c. will all be popularized and made more accessible and useful to the Irish public, as to whose industrial progress their lordships express a special interest.

BURSLEM SCHOOL OF ART.—The annual meeting for the distribution of prizes and election of officers, was held on 20th ult. There was a numerous attendance, including ladies. Mr. Smith Child, M.P. presided. Around the room were displayed the drawings of the students, chiefly in pencil outline. The first annual report was read and adopted: it congratulated the meeting on the successful establishment of the school. The average number of pupils on the books in the central school, had been eighty-nine. The fees had been slightly increased in accordance with the regulations of the Government Department of Practical Art.

RAILWAY MATTERS.—In the week before last the sum of 330,797*l.* 2*s.* 8*d.* was earned on 7,086¼ miles of railway, thereby giving an average of 46*l.* 13*s.* 7¾*d.* a mile. In the corresponding week of 1853 the receipts amounted to 294,711*l.* on 6,745½ miles, or 43*l.* 13*s.* 8¾*d.* a mile. The sum in advance over 1853 is therefore 2*l.* 19*s.* 11*d.* a mile. The receipts since the first week in January over all lines amount to 4,166,019*l.* on 7,086¼ miles, or 587*l.* 17*s.* 5½*d.* a mile. For the same period in 1853 they amounted to 3,791,484*l.* on 6,745½ miles, or 562*l.* 0*s.* 8½*d.* a mile. The increase, therefore, in favour of the present year is 25*l.* 16*s.* 9*d.* a mile.——A plan of portable railway has been patented by Mr. W. Crosskill for the use of common road carriages, with common wheels, as well as for railway carriages, which, however, is only advocated for situations where the expense and time necessary to establish a permanent line prevent its being carried out. A line of 1,000 yards has been tried at Beverley, for service at Melbourne. In a report, Mr. Parkes, the engineer, states that the railway is well designed for the object intended, that it is simple and light, but quite strong enough for loads from 2 to 4 tons, drawn by horses; readily put together, laid down at a small cost, and well adapted for practical use. The line at Beverley is purposely laid down on a very irregular piece of ground, presenting very sharp curves and steep inclines; yet with some heavy experiments and severe tests, it is said to have stood them successfully. Mr. Crosskill has also introduced a double line, by which army carriages, parks of artillery, &c. might be transported. The cost is from 1,100*l.* to 1,400*l.* a mile.——We lately noticed an American proposal to use India-rubber or gutta percha for deadening vibration in the rails. An American paper now states that India-rubber sleepers have been laid down on part of the New Jersey Central Railway, and that the result is that the carriages pass along with a springy elastic motion, without noise or jolting.

THE BRISTOL GRAPHIC SOCIETY.—The second *soirée* or *conversazione* of this society, which comprises among its members nearly all the artistic talent of Bristol and neighbourhood, was held on Tuesday evening in last week. The tickets were all previously exhausted by a demand far exceeding the supply. The novelty of the present entertainment consisted in the admission of oil paintings, the works of deceased artists of Bristol. The octagon presented additional features of interest in the shape of large folios filled with drawings, sketches, engravings, &c. Several flowering shrubs were likewise ornamentally disposed, in this and other parts of the building. The chief room was devoted to water-colour drawings, the main feature of the exhibition. The company numbered between 400 and 500.

SHEFFIELD LITERARY AND PHILOSOPHICAL SOCIETY.—At a recent meeting of the Sheffield Literary and Philosophical Society, Mr. S. Mitchell gave a description of a number of Roman silver coins, recently found near Hall Cur, in digging the foundations for the new works being erected there. A few of the coins had been previously disposed of by the workmen employed, but forty-eight were found in their possession, and were purchased by Mr. M. E. Hadfield, who transmitted them to the Duke of Norfolk. The coins are those of Vespasian, Domitian, Nero, Trajan, Antoninus Pius, Marcus Aurelius, Faustina, and Sabina. They range from 75 A.D. to 160 A.D. They are in very good preservation, and some of them are rather curious.

GREAT CENTRAL GAS CONSUMERS' COMPANY.—The sixth half-yearly meeting of this company was held last week at the London Tavern; Mr. Thomas Dakin in the chair. The report stated that the balance available for dividend for the half-year, after deducting all trade and working expenses, was 8,902*l.* 5*s.* 7*d.* (less 1,200*l.* agreed to be set aside in April last), out of which the directors recommended that a sum of 5,625*l.* being a dividend at the rate of 7½ per cent. per annum, free of income-tax, be declared, leaving a balance to the credit of the next half-year's account of 3,277*l.* 5*s.* 7*d.* There was a steady increase in the business of the company, and the rental for gas last year was larger by the sum of 4,106*l.* than that of 1852. Heretofore, said the chairman, the company had difficulties, but now their works and mains were in the most complete order, and, indeed, they had a capacity to the extent of 50 per cent. more than they had employment for. The company had kept faith by using every effort to improve the quality of their gas, and he thought they ought to have received further support. The report was unanimously agreed to, as also was the proposed dividend of 7½ per cent.

BRISTOL FINE ARTS ACADEMY.—On Thursday in last week the annual meeting of this society was held at the society's rooms, Drawbridge, Mr. J. S. Harford in the chair. The chairman, before calling on the secretary to read the annual report, said there was one feature in it which required particular attention, namely, the singular fact that, notwithstanding the excellence of the exhibitions of art placed before the public, there should still be a considerable deficiency on making up the accounts. Since their last annual meeting two pleasing circumstances in connection with the society's progress had occurred. One was the proposed school of art, which the number of attendants showed was fully appreciated: the other was the establishment of the Graphic Society. No one could have attended its first meeting without being gratified and surprised to see so large a number of ladies and gentlemen assembled, all anxious for its continuance. The secretary then read the report, which showed that the proceeds of the exhibition amounted to 53*l.* 9*s.* and cash received on account of pictures 197*l.* 5*s.* 4*d.* The total income of the society, with the balance in hand, was 820*l.* 6*s.* 7*d.* The disbursements showed that 143*l.* 6*s.* 6*d.* had been paid to artists for pictures sold in the exhibition, and the expenses, 311*l.* 6*s.* 4*d.* leaving a balance of 365*l.* 13*s.* 9*d.* The report was adopted. Mr. P. W. Miles said he hoped when they got to their new building at the top of Park-street it would be better known, and the public feel a greater pride in supporting it. The actual loss this year amounted to 14*l.* which was not a sum of much moment; but the exhibitions ought to be a source of revenue. The Royal Academy received 80,000*l.* in shillings. With regard to the building, they had not funds with which to erect anything very large, and it would be injudicious to spend all their money in building. He trusted that when the plans, which the architects had so kindly agreed to prepare, were before the public, additional subscriptions would come in, and the committee be enabled to increase its size and make it a handsome edifice, worthy of the city of Bristol.

LIVERPOOL ARCHITECTURAL SOCIETY.—At the semi-monthly meeting of this society on Wednesday evening, in last week, specimens of glass manufacture were exhibited by Mr. Bowden, of Bristol, and Mr. Edmondson, of St. Helen's. Mr. Higgins read a paper on "The Entity of the Ionic Order," which we shall print hereafter. A petition to Parliament, in favour of the adoption of a decimal system of coins, weights, and measures, was adopted, the petitioners declaring that they have frequent experience of the great inconvenience of the present system in land surveying, measurement of work, and practical architecture.

PUBLIC BATHS AND WASHHOUSES.—A return by the "Committee for promoting the Establishment of Baths and Washhouses for the Labouring Classes" shows that the revenue of the eight establishments in the metropolis during the past quarter, *winter* season, was 3,748*l.* 1*s.* 4*d.* and we learn that of this amount 1,607*l.* 18*s.* 4*d.* had been paid for the use of the washhouses. At the St. Martin-in-the-Fields establishment there have been 27,290 bathers during the quarter ending Lady Day, and at that of St. Giles and Bloomsbury, 28,576.

BATHS.—Baths, both hot and cold, are still "*a luxury*" in our houses. How is this, when the most able men in the faculty pronounce them to be *necessary* for preserving health? The new disease of the kidneys, called *morbus brightii*, is believed by many to be caused by a want of the use of that necessary adjunct to a healthful home—a bath. I hope, among your other teachings, you will, from time to time, point out to those in whose power it is to preserve the health of her Majesty's subjects the absolute need there is to build a bath *in every house*.

MEDICUS.

TELEGRAPHIC PROGRESS.—Joseph Ilsley, of Lisbon, has taken out a patent in England for a system of telegraphic apparatus, to be worked by a column of atmospheric air, by which he proposes to supersede the employment of electric currents. The indicating apparatus consists of a close chamber, provided with a strong glass cover, and is constructed precisely on the principle of the Aneroid barometer. Or the index hand may be moved by the action of the air on a column of mercury, similar to the common mercurial barometer. The claim is for a telegraph acted on by a column of air, worked by a piston enclosed in a cylinder. Water, we remember, was at one time proposed for the same purpose.——The Czar has just completed arrangements by which he may learn the London news of the morning almost, perhaps quite, as soon as our merchants see their newspapers. The electric telegraph has long been in operation between St. Petersburg and Warsaw, and it is being rapidly extended from Warsaw to the Prussian frontier. But, in the meantime, the Czar has caused the portion already constructed to be connected with the Prussian telegraph near Myslowitz, and by this means St. Petersburg is placed in direct communication with the capitals of western Europe. There is, however, no reciprocity of advantage. The Russian line is not open to private despatches.——The telegraphic communication between Calcutta and the Punjab frontier at Loodiana is probably by this time completed. Dr. O'Shaughnessy pledged himself to the Governor-General to open all the lines between Calcutta, Delhi, and Bombay, extending over 3,000 miles, for regular correspondents, in two years from November, 1853. He has now further pledged himself, in the *Englishman*, to complete these lines within half the time, and at 20 per cent. under the estimated cost. He states that he knows the English system of electric telegraph to be the worst in construction, the worst in organization, and the very worst in practical working, of all those adopted in Europe or America!

THE HOUSES OF GALLIPOLI.—"From one learn all," says the *Times'* correspondent:—"The hall door, which is an antiquated concern—not affording any particular resistance to the air to speak of—opens on an apartment with clay walls of about 10 feet high, and of the length and breadth of the whole house. It is garnished with the odds and ends of the domestic deity—with empty barrels, with casks of home-made wine, buckets, baskets, &c. At one side a rough staircase, creaking at every step, conducts one to a saloon on the first floor. This is of the plainest possible appearance. On the sides are stuck prints of the 'Nicolaus ho basileus,' and of the Virgin and Child (after the Greek school), with wonderful engravings from Jerusalem. There is no other furniture. It may be observed, that as the schism between the Greek Catholic and the Roman Catholic Churches arose out of the discussion of an intricate question on the subtlest point of theology, they fight bitterly on matters of very fine distinction yet. Thus the Greeks are iconoclasts, and hate images, but they adore pictures. A yellow Jonah, in a crimson whale with fiery entrails, is a favourite subject for these artists, and doubtless bears some allegorical meaning. From this saloon open the two or three rooms of the house—the kitchen, the divan, and the principal bedroom. The floors are covered with matting, but, with the exception of the cushions on the raised platform round the wall of the room (about 18 inches from the floor), there is nothing else in the rooms offered for general competition to the public. Above are dark attics. *Voilà tout!* My apartment would form a study for Dr. Reid or Mr. Gurney."

WORKMEN'S READING ROOMS AN EXAMPLE WORTHY OF IMITATION.—Mr. W. H. Leatham, of Hemsworth Hall, Pontefract, is erecting a neat building at Hemsworth, to be called the "Working Men's Reading Room," at a cost of about 130*l.* exclusive of site. Mr. Leatham intends, it seems, to supply the room with suitable books, a daily and two or three provincial papers. The whole expense of the institution, including fuel, lighting, cleaning, &c. is to be defrayed by the founder. Hemsworth is a village containing nearly a thousand inhabitants, chiefly following agricultural pursuits; but there is also a considerable number of masons, carpenters, smiths, &c. who at present, it is said, spend their leisure time very unprofitably: these, as well as the farm labourer, will now have access to a library and newsroom, free from any charge whatever. This is a step in the right direction towards the establishment of a permanently good understanding between the rich and the poor.

BORING AND BLASTING.—Mr. H. Kraus, of Zurich, has patented some improvements in implements for boring rock, &c. for blasting. The tool is for increasing the size of a hole at its lower part, and consists of a bar of iron, into the lower end of which is inserted a steel blade, secured by pins or set screws. The blade and bar are tapered off from the cutting edge, and the instrument is worked vertically up and down from above.

WATER-METERS: SOCIETY OF ARTS.—At the last meeting of this society, Lord Berriedale in the chair, the first paper read was on water-meters, by Mr. J. Glynn, F.R.S. After alluding to the necessity for some correct measurer of water, now that there was a very general demand for the constant supply system, the author described what he thought were the essentials of a good water-meter. The majority of those hitherto invented had, he considered, been deficient in one or more essentials, and the jury of the Great Exhibition did not award even honourable mention to any meter, though five different contrivances were exhibited there. He then explained the leading features of the several plans which had been proposed. A meter invented by Mr. Chadwick, of Salford, had recently been brought under his notice, which it was stated only varied 5 per cent. between a head of water of one foot and one of 300 feet. In this meter a wire gauze or sieve was introduced between the supply-pipe and two inlet passages, situate in the bottom of a cylindrical vessel. These passes opened into two vulcanised india rubber bags, embedded and laid flat on the bottom of the vessel, and there were openings at the other extremities of the bags, for allowing of the exit of the water into the meter. On the water entering these bags, it sets in motion three conical rollers attached to a central spindle in connection with the ordinary counting wheels and dial, each revolution of the rollers registering exactly the contents of the bags.——The second paper read was "Description of Taylor's Water Meter," by Mr. B. Fothergill. This meter consists of a cylindrical vessel or cistern, of a size proportioned to the bore of the pipe that was to receive and discharge the water. Inside there was a drum revolving on its axis in a vertical or upright position, and the stream passing through the meter was distributed upon the drum at each side of the meter. The registration was given by a train of wheels connected with the drum, and carried to the indicator. There were betwixt 100 and 200 of such meters working in various parts of the country.

PATENT SLIP AT BRISTOL.—One of "White's Patent Slips" has been laid down at the Nova Scotia wharf, Hotwells. An iron railroad, upon an inclined plane, with a central rail and guide wheels, is laid down into sufficiently deep water to allow vessels of the burthen for which the slip is calculated to freely float on to the moveable slip or cradle, which is attached to it. This cradle is fitted to the centre rail. The vessel is secured safely in her position, and a powerful connecting chain is then placed in motion by means of a stationary capstan at the extreme end of the railway, on the land, worked either by manual or steam power; and the vessel, even if of 800 or 1,000 tons, is safely and speedily conveyed up the inclined plane, high and dry, upon the land. This species of slip, as a substitute for a dry dock, has many advantages, both in original cost, economy of working, and facility of ship repair. How it comes to be called White's Patent Slip we do not know: the principle is by no means new: we recollect of one precisely such as this in all essentials, about thirty years since, at Leith, and then well known as "Morton's Patent Slip," on which we have often watched with interest the hoisting of large vessels up the inclined plane, and into the open air.

A NOISE IN THE HOUSE.—A correspondent from Ipswich writes thus:—"I am anxious to obtain the advice of any of your correspondents who may have experienced an intolerable nuisance such as I have to complain of in the house I now occupy, and the discovery of the cause of which baffles me. Although it has existed eighteen months, and arose from the time I excavated the one adjoining, to make a kitchen in the basement, I have not found a person capable of suggesting a cause for so remarkable a noise. I will give you a few particulars. At first it is not continuous, but ceases, or nearly so, from about autumn, but as I expected returns about the beginning of April as bad as ever. I ought also to say it is only in *the day time*, commencing *at sun rise, stopping hydegrees as the sun recedes from west, the stiller and warmer the air*, the more noise; indeed, a stiff breeze seems to stop it. Mine are three substantial brick-built and slated houses, built on a rising hill, and were exempt till I made the alteration named. The sound is heard most in the basement and ground-floor, and conveyed by the walls, I suppose, to the top of the house—a three story one. It appears like the moan of a small dog, commencing softly, ending suddenly, the length varying from a few seconds to five minutes, with intervals between of various lengths. It is not heard in the house I altered, the end one, and not so loud in the other. I must do something to stop it, but should like the opinion of any of your readers as to the cause, and advice under the circumstances." An examination of the place itself would seem to be necessary before advising; still some of our readers may be led to offer a suggestion. Few ghost stories have so good a foundation as this would afford for one.

MEMORIAL WINDOW, ROCKINGHAM.—We are asked by Mr. Hedgeland to say, that the memorial window lately erected in Rockingham Church, to the memory of the late Hon. R. Watson, was executed, as well as designed, at his establishment.

HEALTH OF GLASS-CUTTERS.—At a late committee meeting of the Stourbridge Sanitary Association, a conversation took place regarding the health of glass-cutters. Mr. A. Freer stated that there was more sickness occasioned by metallic poisons among the glasscutters of this district than those of Birmingham, which the men themselves were of opinion was owing to the larger quantity of arsenic employed in the polishing of the glass by the trade of Stourbridge than that of Birmingham, and which Mr. Freer imagined must arise from this metal forming, with the lead also employed, a most deadly poison, the arseniate of lead. The sooner the glasscutters mount the moustache the better for their sanitary welfare.

AN ECCENTRIC ENGLISHMAN'S HOUSE.—Whilst talking of our countrymen, it is perhaps not out of place to mention that one of them, whose name I cannot yet ascertain, has just distinguished himself by an act of singular eccentricity. He has built a house in the Quartier Tivoli for the residence of himself, his wife, and eight children, which is the talk of all Paris. It is circular, like the *Halle aux Blés*, and has neither door nor window externally. The approach to it is from the ground floor on to the roof by means of a ladder, which is moved up or down by machinery similar to that of a drawbridge. There is only one floor, and that contains eighteen apartments, more or less small in dimension, looking into the centre, which is lighted from above by a glazed cupola. One stove for all these rooms is in the middle, and in summer its place is to be occupied by an exquisite parterre of flowers. A circular balcony, open to all the apartments, surrounds this space. The motive for this oddity is of course only known to the author of it, but everybody can see that two points are gained by it—immunity from the taxes on doors and windows, and a perfect preventive of any attempt at burglary.—*Paris Correspondent of the Morning Post.*

TENDERS

For rebuilding Canterbury Hall, Lambeth. Mr. Samuel Field, architect, who supplied the quantities:—

Higgs	£2,899 0 0
Mecars (Wandsworth)	2,850 0 0

All communications strictly confidential. —Address, H. R. B Office of "The Builder"

BUILDING LAND TO LET, at very low ground-rents for ninety-nine years, close to Regent's-park, and on the foot of Primrose-hill, a few minutes' walk from the city station.—For third-rate eight-roomed houses, for which there is a great demand in that locality, and would readily let or sell. There are some frontages suitable for shops, and others for private houses; also some with great depth behind, where work hops or public establishments might be erected For plans and particulars apply to F ELLIOTT, 5, Harrington-square.

FREEHOLD BUILDING LAND at TWICKENHAM—8 acres, situate near the Church and Railway Station, with 1,000 feet frontage to Kingston New road, and with private acres to the river Thames at Cross Deep The land is thoroughly drained on approved sewer newly constructed, and will be LET or SOLD in parcels, to suit the convenience of buyers. — Apply, for plan of the ground and further particulars, to JAMES CLARK, 24, Billiter-street, London. N B. About three acres of the ground consist of a productive well-stocked walled garden, with a large range of substantial forcing-houses.

GROUND TO LET, for Building, in the parish of SHOREDITCH, at the rear of Messrs. Bellingham's Distillery, Queen's-road Dalston, in Plots, which will be pointed out by Mr HARRIS, at the Counting-house on the Estate; and in the parish of ISLINGTON, at Grove-road, near the Cock Upper Holloway, in Plots, which will be pointed out by Mr. OKEDEN, at the Counting-house, on the Estate. -Apply for particulars, as above, or to D. HUGHES, Solicitor, 13, Gresham-street, Guildhall.

BUILDING LAND TO BE LET, at ACTON, HOMERTON, WIMBLEDON, CHERTSEY, (close to the Station), SUDBURY (near Harrow), at CROYDON (within a mile of the Station), and at NORWOOD (within three minutes' walk of the Station), and LOWER NORWOOD, near Tulse Hill, a suitable estate for building purposes.—For particulars, apply to Mr. W. F. LOW, Solicitor, 67, Wimpole-street, Cavendish-square. Leases direct from the Freeholder. Money advanced if required.

NORWOOD.—BUILDING LAND TO BE LET, within three minutes' walk of the Norwood Station in Wimpole (hereafter to be called Luce in) Road, south-hill, with a full view of the Crystal Palace and Grounds, and only one mile distant, southern aspect, with some of the most magnificent views in the county of Surrey, on which building has commenced, and greatly nearly completed for occupation, close to a church. The roads are substantially made, and the water of the South Lambeth Company, from Thames Ditton, laid on to the houses erected. Builders and gentlemen desirous of a first-rate site will find this spot worthy their attention, and advances will be made if required.—For further particulars and plans of the Estate, apply to Mr W. F. LOW, Solicitor, 67, Wimpole-street, Cavendish-square Upwards of forty trains stop at the Norwood Station during the day. Leases direct from the freeholder.

BUILDING LAND TO LET for 99 years, situate at Haverstock-hill, Hampstead, near the Railway Station, for third and fourth class houses, and shops in part if required. The class of house may be seen, and further particulars obtained, on application to Mr. GRINDER, 12, Bath-place, Willman street, Caledonian-road; or to Mr. CLILY, at Messrs. Vincent and Day's, 2, Paper-buildings, Temple.

TO BE LET, a large SITE for BUILDING, on the direct road from the Crystal Palace to the West-end; five miles from Hyde-park, and skirted by a branch railway; enclosed with houses of the best character. -For particulars apply to Messrs. PANSON and SON, Laurence Pountney-lane.

TO BUILDERS, STONE-MASONS, AND ENGINEERS.

TO LET, a LARGE YARD, WORKSHOPS, and SHEDS, fit for any Manufacturing Business, enclosed with Hoarding Gates and Dwelling-house attached.—Inquire of J. W 14, New Millman street, Foundling Hospital.

TO BE LET or SOLD, a Ten-horse Power BEAM-ENGINE, Boiler, and Fittings, complete, with or without premises -Apply at 63, Winterstoke-street, St. Luke's.

TO BUILDING SOCIETIES.

TO BE LET, in the Neighbourhood of Kensington, some eligible lots of BUILDING LAND, at a moderate ground rent.—Apply to Mr. DUNFORD, Stationer, &c. 27, High-street, Notting hill.

Guildhall, London, May 1, 1854.

THE COMMITTEE for LETTING the BRIDGE HOUSE ESTATES will meet at Guildhall, on FRIDAY, the 12th day of MAY instant, at ONE o'clock precisely, TO LET, by TENDER, on a repairing lease for 12½ years, from Midsummer-day, 1854, a HOUSE, No. 7, in York-place, Kent-street-road, Southwark.—A plan of the property and conditions for letting may be seen, upon application at the Architect's Office, Guildhall. FERDINAND BLAND, Comptroller of the Bridge House Estates.

TO BUILDERS

SEVERAL PLOTS of FREEHOLD GROUND, suitable for the erection of small houses, TO BE LET on building leases, for terms of forty years, at moderate ground rents. Money will be required to be laid out upon the houses as they proceed. Apply to Mr. ETHERINGTON, at the Asylum Tavern, Asylum road, Old Kent road.

KILBURN.—ELIGIBLE BUILDING LAND. TO BE LET, for Ninety-nine years, or the FREEHOLD for SALE, a FRONTAGE of 50 feet by 90 feet in depth, for Six houses, on the part of the Allen Park estate, adjoining the Carlton road. Also, a Frontage of 54 feet by 76 feet in depth, for three houses, in the part to be called Pembroke-road, abutting upon the Carlton road. The roads and sewers are made, and the gas and water laid down. Apply to JAMES BOUTELL, 8, George court, Piccadilly.

FREEHOLD BUILDING GROUND TO BE LET or SOLD, TEN ACRES, excellent roads, twenty-five miles from town, two and a half from the Horley, and three from the Three Bridges Stations, straight on the line. A deep line is expected to East Grinstead, with a station near the land, when its value will be doubled; near two churches; and buildings (some good private dwelling) contiguous. Views delightful; situation healthful; and good, dry, brick earth is supposed to be on the property, as bricks are in the near. Terms very moderate. Plans, &c. at the Office of JOHN HUGGINS WATSON, Esq. Architect, 8, Nottingham place, New road, Regent's park.

CRYSTAL PALACE.—BUILDING LAND TO BE LET, directly opposite the Crystal Palace, and facing the new railway station in the Anerley road, the corner plot being let for a first-class public house. A fine opportunity offers itself for the erection of shops and private houses that must command high rentals in this locality. Terms moderate. Lease, ninety-nine years, direct from the freeholder.—Apply to Mr. ARTHUR TAYLOR, Architect and Surveyor, 18A, Basinghall street, and 11, Canonbury-square.

TO BUILDERS AND BUILDING SOCIETIES.

TO BE LET, GROUND for Four Shops, in King's-road Chelsea; a round-rent low; term, about ninety years. Sewer already in; vaults turned; and street paved. For further particulars, apply to Mr. WM. ELLIOTT, Builder, 5, Oxford terrace, King's-road, Chelsea.

CRYSTAL PALACE.—BUILDING LAND. The well-known BELWICH WOOD, the chief ornament of this beautiful locality, has been let on building leases, and most attractive sites for villas and Mansions, &c. This may now be had for a term of eighty four years, and at last redeemed. Leases may be had direct from Belwich Cottage.

As the letting of the freeholder and of the College to preserve the greater part of the wood, only a limited number of houses will be built, and the residents will have access to the wood themselves, as well as powerful protection for their persons. A good supply of water from the Lambeth Company's mains may be had.

Apply to Messrs. BANKS and BARRY, Architects and Surveyors to the Sydenham hill Estate, 27, Sackville street, Piccadilly.

CRYSTAL PALACE.—SHOPS.—FOUR PLOTS of Freehold Land, suitable for first class SHOPS, the property of the company, and close to the Palace, may be had on BUILDING LEASE, with option of purchase.

For particulars apply to Messrs. BANKS and BARRY, Architects and Surveyors, 27, Sackville street, Piccadilly.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. Twenty-one acres of land to select a site for the erection of villa residences, this affords an excellent opportunity. Books may be had, delivered on the site of the intended Park, at 3s. per the road. For particulars apply to Mr C HAMBRIDGE, Architect, 7, Cheapside, City.

BROCKLEY-HILL PARK ESTATE, close to the Forest hill Station, on the Brighton Railway. TO BE LET, on Building Leases, for a term of years, FOUR most eligible PLOTS of GROUND, at the ground rent of £50 per plot will be allowed per rod a frontage of 84 feet. Each Packet of Plans will be erected by the Estate Valuation and Surveyor.—Apply at the offices of GEORGE MORGAN, Esq. 5, Chancery lane.

BRIGHTON.—A most eligible SITE for TWELVE HOUSES, part of a bold crescent, TO BE LET on building lease, a moderate ground rent. Two-thirds of the amount will be advanced on mortgage. Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery lane.

CLAPHAM. To BUILDERS and Others. TO BE LET or SOLD, FOUR new erected, well-built HOUSES, with large gardens, in this favourite locality. Rent £50 per annum, or the lease of each in section, sixty four years to be sold for the small sum of £100. Also Two Carcases to be Sold for £24 each, on plot if the purchaser be now main remain on mortgage.—Apply to Mr CARPENTER, Solicitor, 3, Elm-court, Temple.

FREEHOLD BUILDING LAND.—TO BE SOLD, in lots of 50 feet frontage, by the feet deep at 10d and 12d. per lot, beautifully situated within a few minutes walk of the Caledonian Station, Pentonville road, and in St. Ermin Estate, Surrey, about eleven minutes from London, an eligible entrance coming into a good street extent and depth. Apply to Mr. R. B. SLADEN, Solicitor, 36, Bedford street, Theobald's, or Messrs. BROWN and ROBERTS, Surveyors, 22, Thrognorton-street.

NEAR the STATION, BARKING-ROAD. TWO PLOTS of FREEHOLD BUILDING LAND, in BREMER-PLACE, fronting the Yeabon House, where Lodges are in great demand having a frontage of 50 feet, and a depth of 90 feet. Railway passes, secured to the purchasers of the estate according to the contract. Also a Plot of Land, with a frontage of 50 feet, and a depth of 90 feet, in Bastard's Place, Broadway, Barking Price, 10s.—Address prepaid, ELLIOTT, care of Mr Taylor, 76, Fenchurch-street.

FREEHOLD LAND.—TO BE SOLD cheap, a PLOT of FREEHOLD LAND, situate on the west part of Croydon common, Surrey, within one mile of the railway station, having a frontage of 90 feet to a new street now, by a depth of 150 feet, sufficient for six semi-detached houses, a description of property much in request in the neighbourhood. Builders requiring advances can be accommodated. Shortly.—Also near the Grange, 1 Lot of Building Land, with a frontage of 50 feet, and a depth of 150 feet, suitable for a detached house. Either of the above Lots may be had on Building Lease to a respectable party for ninety-nine years, at a ground rent of £12 12s. per annum, which ground-rent is to be included in the rent. In both cases most of the purchase-money may remain on mortgage. Apply to JOSEPH SPRINGBETT, Esq. Architect, 6, De Beauvoir-grove, Kingsland.

TO FREEHOLD LAND SOCIETIES, SPECULATIVE BUILDERS, AND OTHERS.

NORTHWICK ESTATE, Harrow-on-the-Hill.—PLOTS of FREEHOLD BUILDING LAND TO BE LET or SOLD, adjoining the Railway Station, possessing one of the most picturesque views in Middlesex. Parties erecting houses thereon have the advantage of a free first class railway ticket during the term of eleven years. For plans and further particulars, apply at the Offices of the Architects, Mr E. A. SPURR, 3, Newtown road, Westbourne-grove, or Mr CHARLES LAWS, 17, Clement's-inn, Strand. Sewers and roads formed. Advances made if required.

TO LIME, SLATE, COAL, AND CEMENT MERCHANTS.

TO BE LET, a capital WHARF, in a semi-suburban town, with good business attached. A man of business habits and some capital may secure an independence. —Address, I. H. Exeter hall Hotel, Strand.

Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery-lane.

GREAT ARBOR-HILL ESTATE, SLOUGH, Bucks.—The Directors of the NATIONAL PROVIDENT FREEHOLD LAND SOCIETY beg to announce that this most desirable FREEHOLD ESTATE, land-tax redeemed, lies further and closer to the SLOUGH STATION, on the Great Western Railway, and within a half-hour's ride of the metropolis, commanding from its high situation most splendid and extensive views of the surrounding country, and Windsor Castle, has been purchased for allotments amongst the members. The estate is most eligibly situate for villa residences of a superior class, with a frontage to the high-road from Slough to Windsor, so laid out on the north by the residence, observatory, and grounds of the late Sir John Herschell; on the south by Upton-park and in close proximity to the parish church. Public meetings will be held, at the Mechanics' Institution, Slough, on TUESDAY, the 23rd of MAY instant, at SEVEN o'clock in the evening, the Right Honourable Lord CHEWTON, Chairman of the Society, in the chair. A ballot for right of choice on the Great Arbor hill Estate, and other freehold estate purchased for the members of the Society, will take place at the latter meeting in which ballot all shares previously taken will participate, but all and any share be drawn the succession on which shall be in arrear, such share will lose all benefit from that drawing. The freehold estate at Staines Middlesex, is now in course of allotment. Eligible building plots, with frontages of 50 feet by a depth of 245 feet, for 50l.; frontages of 20 feet, 25l. A contract for making the roads, &c. has been accepted, and they will be immediately commenced, under the supervision of the Surveyor of the Society. Conveyances, free of expense, to the allottees.—For shares, prospectuses, rules, plans, and conditions of sale apply to Mr. WATKINS, Staines; Mr. JOHN CLEAVE, Tancred House, Fleet; or to JOHN POPE COX, Secretary, Staines, 5d. Monthly payments, 8d. 4 per cent interest allowed upon all deposits, paid in shares, and subscriptions six months in advance.

472 New Oxford street, London; and 86, Cheapside, corner of Bucklersbury.

MANUFACTURING PREMISES WANTED on the water-side, or build ing ground suitable —Apply (by letter), stating particulars, to G. H. 168, Drury-lane.

WANTED to PURCHASE a COTTAGE, detached or semi-detached, within five miles, or suburbs of omnibus fare of Charing-cross, to contain drawing room, parlour, and not less than three Bed-rooms, Kitchen, &c. A good garden indispensable.—Address F. A. R. Mr. Kennett's, Bookseller, 14, York street, Covent Garden.

TO BE SOLD by PRIVATE CONTRACT, an Old-established PAPERHANGING MANUFACTORY in the north of England, in which a good trade is done. The manufactory, which is freehold, is a square brick building, three stories high, covered with slate and tile, and has all the fittings for carrying on the business, where fifteen printing tables one machine for surface printing machine, one six-inch engine, with rolling machine attached; a desiccating drying apparatus, applied so that the work is finished and dried off quickly as printed; colour-mills, embossing machine, and brushing machine, all driven by steam power upon the premises; lathe, and every other requisite for turning up rollers for machine work. The stock of colours, paper, grounds, and printed goods are of the best description, recently purchased, and consists of numerous patterns, which, if all work, to order, could be executed in a large amount. The stock of blocks is large, and is a collection of well-selected and saleable patterns. A good and useful set of patterns has been sold to the trade this spring, which are doing well and promise a large amount of orders. The value of the concern is estimated at about £1,000. Further particulars may be known on application to Messrs. SHIELD and HOLWOOD, Solicitors, No 14, Clement's-lane, Lombard-street, London.

TO PAPER-HANGERS and BUILDERS. FIFTY THOUSAND PIECES of PAPER-HANGINGS FOR SALE, from 4d to 8s 6d.—To be seen at 8, Queenhithe, London.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS, is Grosset's, WORLD'S END, PIMLICO, 28, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, THIRTY PER CENT CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFREY, ALLEN and CO. Paper Stainers, beg to call the attention of the trade to their patterns of Paper hangings for the present season, that comprise every description of style and quality, from the most elaborate decoration to the cheapest paper that can be produced, and which they are prepared to offer at very low prices. J. A. and CO also beg to inform the trade that they have OPENED a WAREHOUSE at No. 30, OXFORD-STREET, where all goods can be obtained on the same terms as at the Factory.

GUTTA PERCHA PAPER FOR DAMP WALLS. J. A. and CO are the sole vendors of this well-known remedy for Damp Walls.

115, Whitechapel, near the Obelisk, and 150, Oxford-street.

PAPERHANGINGS.—TRUMBLE and COOKE, 3, Oxford street, London Manufactory, Leeds, respectfully inform the Trade and Builders generally that they have now an immense STOCK of PAPERHANGINGS manufactured from their new patterns for the present season, consisting of Flocks, Gold, Satins, Oaks, Granites, Marble, and Machine Goods which they can supply on terms highly advantageous to the purchaser.

ARCHITECTURAL, CIVIL ENGINEERING, and SURVEYING OFFICES, established by Messrs HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c.

For preparing Gentlemen for Architects, Engineers, Surveyors, Levellers, Draught-men, Measurers, Valuers, &c. and for giving EVENING INSTRUCTION, in Architectural and Civil Engineering, &c. Drawing and Designing, Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Preparing Estimates, &c. &c. Terms, One Guinea per Quarter.—For prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

OPENING of the CRYSTAL PALACE, 1854.—It is intended to Open the Crystal Palace and Park at the end of MAY; after which they will be open Daily, Sundays excepted.

The following are the arrangements for the admission of the public:—

FIVE SHILLING DAYS.—On Saturdays the public will be admitted to the Palace and Park, by tickets of 5s. each, and by tickets to include conveyance by railway.

HALF CROWN DAYS. On Fridays the public will be admitted by payment at the doors, by tickets of 2s. 6d. each, and by tickets to such, to conveyance by railway.

SHILLING DAYS. Mondays, Tuesdays, Wednesdays, and Thursdays will be shilling days. At the gates, a payment of 1s. each will admit the public; tickets entitling the holder to admission to the Palace and Park, and also to conveyance along the Crystal Palace Railway, from London-bridge station to the Palace and back, will be issued at the following prices:—

Including first-class carriage	2s. 6d.
Including second ditto	2s. 0d.
Including third ditto	1s. 6d.

CHILDREN.—Children under twelve years of age will be admitted at half the above rates.

HOURS OF OPENING. The Palace and Park will be opened on Mondays, at Nine o'clock; on Tuesdays, Wednesdays and Thursdays at Ten o'clock, a.m.; and on Fridays and Saturdays, at Twelve o'clock, and close every day an hour before sunset.

ON SUNDAY DAYS. No payments will take place about the end of May. The price day will be announced as early as possible. On that no season-ticket only will be admitted.

SEASON TICKETS. Season tickets will be issued at two guineas each to admit the proprietor to the Palace and Park on the day of opening, and all other days when the building is open to the public.

Season tickets, to include conveyance along the Crystal Palace Railway from London-bridge to the Palace and back, without further charge, will be issued at three guineas each, subject to the regulations of the London, Brighton, and South Coast Railway Company; but these tickets will be available only for trains from and to London, and the Palace on days as it is open to the public, and will not be available for any intermediate stations.

No season ticket will be transferable or available except to the person whose name it bears.

FAMILY SEASON TICKETS. Members of the same family who reside together will have privilege of taking season tickets for their own use, with or without railway conveyance, on the following reduced terms:—

Families taking two tickets will be entitled to 10 per cent. discount on the charge for such tickets; taking three tickets, to a discount of 15 per cent; taking four tickets, to a discount of 20 per cent; and five tickets and upwards, to a discount of 25 per cent. Families obtaining the above privilege, and desiring to avail themselves of it, must apply in the accompanying form; and these tickets will be available only to the persons named in such applications. Printed forms of application may be had at the Office, 3, Adelaide-place, and at the other offices of tickets.

Season tickets will entitle to admission from the opening day till the 30th April, 1855.

Applications may be made for season tickets at the Offices of the Company, 3, Adelaide-place, London-bridge. Season tickets, as soon as ready, will be delivered in the order in which the applications have been made, at the Offices of the Company, 3, Adelaide-place, London-bridge, and 14, Regent-street; and at the Crystal Palace; also at Mr. Smart, 28, James's-street; Mr. Mitchell's, Bond-street; Westerton's Library, Knightsbridge. The tickets to include conveyance by railway will be issued only at the office of the Secretary of the Brighton Railway, London-bridge.

SPECIAL REGULATIONS AND BYE-LAWS.—All the general provisions and regulations mentioned above are to be understood as being subservient to such special provisions, regulations, and bye-laws on the part of the Railway Company and the Palace Company as may be found necessary to regulate the traffic, and to meet special occasions and circumstances as each may from time to time arise. By order of the Board, G. GROVE, Secretary.

Adelaide-place, London-bridge, April 13, 1854.

FORM OF APPLICATION FOR FAMILY SEASON TICKETS.

To G. Grove, Esq. Secretary, 3, Adelaide-place, London-bridge.

SIR,—Be good enough to supply me with Family Season Tickets for myself and the following members of my family, who are all residing with me.

Yours obediently,

Name .....
Address .....
Designation .....

Christian Name.	Surname.

TO RAILWAY COMPANIES, CONTRACTORS, COAL-MASTERS, AND OTHERS

TO BE SOLD by PRIVATE CONTRACT, TEN PERMANENT RAILWAY TRUCKS, made of the best English oak and yellow pine, calculated to carry five tons and upwards, perfectly new and fit for immediate use. They are suitable for a company's goods or coal-trucks, or a contractor's ballast-trucks, and will be sold a bargain. Also a Four wheels Locomotive Engine, recently put in good repair.—For particulars, &c. address D. P., post office, East Grinstead, Sussex.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne, 18, Spring-gardens, London. 67, Hyde park-street, Glasgow. 27, Dale-street, Manchester.

HOUSE DECORATIONS.—J. MAC LACHLAN, Painter and Decorative Artist, 35, St. James's-street, and at Clapham-common, late from Architects, Surveyors, and Others, that he is practically acquainted with his trade in all its details, and respectfully requests a trial from those who may wish to have their work nicely executed at a very moderate charge, and punctual in time. J. Mac L. will begin to make designs for decoration of rooms, or public buildings, in any part of the kingdom, with estimates.—Tenders for general repairs.

TO ARCHITECTS

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 39, Albany-street, Regent's-park.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

JOHNS'S PATENT PERMANENT STUCCO WASH, STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its suitableness for INTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough Surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse quality appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK —LONDON— PATENT.

If not so marked, the reason may be inferred.
Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. E. MORLEY and CO.; and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. wholesale agents, 62, King William-street, City; JACK and BRADY, wholesale and retail agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 48, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Torquay, bush OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Burmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent.)
CROWLEY, WHITE, and CROWLEY. Sole Manufacturers, now supply this luxurious substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, whole sale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe

Zinc Paint is below the price of white lead, possesses equal body, and perfect purchasable in colour

Price list and prospectus of its superior properties for interior, exterior, and marine purposes forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 30, Lombard-street, London.

PORTLAND CEMENT.—ASPDIN'S PATENT.
Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, East-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Blastic Cements, English and French Plaster, &c.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

6, South Wharf, Paddington.
PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME. Its natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for bad linesin wet and damp situations, such as wharf-walls, docks, &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.
